SnowPro Core Exam Practice Questions Part 2 – Questions With Solutions

Which of the following actions cannot be performed by the consumer of a shared database? ✓Ans - Create a new table in a shared database, insert data in a shared table

Which function is used to find the query id of the last executed query?
✓Ans - SELECT last_query_id()

Which of the following is true regarding how SF stores its data?

1. SF stores table data as simple comma separated files in cloud based storage
2. SF uses its own proprietary columnar format to store table data
3. SF uses parquet file format to store the table data ✓Ans - SF uses its own proprietary columnar format to store table data

SF patch releases are applied to all accounts at the same time ✓Ans - True
- patch releases are applied to all accounts at the same time; the staged released process is only used for new software releases

You increased the size of a virtual warehouse to improve performance of a query. What is this an example of? ✓Ans - Scale Up - Increasing the size of a virtual warehouse will enable faster processing for queries but will not necessarily accommodate more queries and more users

What is the SF recommended approach to identifying the minimum and maximum values for a multi cluster virtual warehouse? ✓Ans - 1. Track the virtual warehouse usage over time and adjust the minimum and maximum values that provide the best configuration for your workload
2. Start with a minimum of 1 & a maximum cluster value of 2 or 3
3. Start with the multi cluster virtual warehouse in auto scale mode

T/F - There is a cost associated with maintaining the partitions associated with the clustering keys ✓Ans - True - SF credits are used to organize the data into correct partitions as it is added to the table

A lot of people are dreaming to pass the SnowPro-Core exam. Also, you can start your own business after you totally master the skills of the SnowPro-Core preparation exam expertly. Quickly, you will become the millionaire. Then it is time for others to envy your luxury life. All in all, our SnowPro-Core Exam Prep is worth for investing. After all, you are the main beneficiary. Please follow your hearts and begin your new challenges bravely.

Snowflake SnowPro-Core Exam is a requirement for users of Snowflake who wish to advance. Many companies rely on professionals who hold this certification to operate their Snowflake based platform efficiently. SnowPro Core Certification Exam certification shows that the individual has demonstrated real-world experience and has proven their understanding of SnowPro's features and capabilities in a cloud computing environment.

SnowPro-Core Study Questions - SnowPro-Core Free Demo & SnowPro-Core Valid Torrent

ExamTorrent have made sure that each Snowflake SnowPro-Core exam questions are updated according to the latest Snowflake

SnowPro-Core exam criteria issued by Snowflake. Each Snowflake SnowPro-Core exam question gets reviewed by Snowflake professionals many times to ensure incomparable accuracy. ExamTorrent offer a demo version of the actual Snowflake SnowPro-Core Exam Question only for customer satisfaction and the candidates can check the validity of the product before actually buying it.

The SnowPro-Core certification exam is an excellent way to demonstrate your expertise in Snowflake data warehousing technology. It is a highly respected certification, which is valued by employers and IT professionals alike. If you are looking to advance your career in the Snowflake data warehousing field, then the SnowPro-Core Certification Exam is a great way to achieve this goal.

Snowflake SnowPro Core Certification Exam Sample Questions (Q513-Q518):

NEW QUESTION # 513

What is a limitation of a Materialized View?

- A. A Materialized View cannot be joined with other tables
- B. A Materialized View cannot support any aggregate functions
- **C. A Materialized View cannot be defined with a JOIN**
- D. A Materialized View can only reference up to two tables

Answer: C

Explanation:

Explanation

There are several limitations to using materialized views:

* A materialized view can query only a single table.

* Joins, including self-joins, are not supported.

NEW QUESTION # 514

How does the Snowflake search optimization service improve query performance?

- A. It improves the performance of all queries running against a given table.
- **B. It improves the performance of equality searches.**
- C. It improves the performance of range searches.
- D. It defines different clustering keys on the same source table.

Answer: B

Explanation:

The Snowflake Search Optimization Service is designed to enhance the performance of specific types of queries on large tables. The correct answer is:

* D. It improves the performance of equality searches: The service optimizes the performance of queries that use equality search conditions (e.g., WHERE column = value). It creates and maintains a search index on the table's columns, which significantly speeds up the retrieval of rows based on those equality search conditions.

This optimization is particularly beneficial for large tables where traditional scans might be inefficient for equality searches. By using the Search Optimization Service, Snowflake can leverage the search indexes to quickly locate the rows that match the search criteria without scanning the entire table.

NEW QUESTION # 515

What are value types that a VARIANT column can store? (Select TWO)

- **A. OBJECT**
- B. STRUCT
- C. BINARY
- **D. ARRAY**
- E. CLOB

Answer: A,D

Explanation:

A VARIANT column in Snowflake can store semi-structured data types. This includes:

- * B. OBJECT: An object is a collection of key-value pairs in JSON, and a VARIANT column can store this type of data structure.
- * D. ARRAY: An array is an ordered list of zero or more values, which can be of any variant-supported data type, including objects or other arrays.

The VARIANT data type is specifically designed to handle semi-structured data like JSON, Avro, ORC, Parquet, or XML, allowing for the storage of nested and complex data structures.

References:

- * SnowPro Core Certification Study Guide

NEW QUESTION # 516

What are value types that a VARIANT column can store? (Select TWO)

- A. OBJECT
- B. STRUCT
- C. BINARY
- D. ARRAY
- E. CLOB

Answer: A,D

Explanation:

Explanation

Characteristics of a VARIANT

A VARIANT can store a value of any other type, including OBJECT and ARRAY. The maximum length of a VARIANT is 16 MB.

NEW QUESTION # 517

Which Snowflake feature or tool helps troubleshoot issues in SQL query expressions that commonly cause performance bottlenecks?

- A. Persisted query results
- B. QUERY_HISTORY View
- C. Query Profile
- D. Query acceleration service

Answer: C

Explanation:

The Snowflake feature that helps troubleshoot issues in SQL query expressions and commonly identify performance bottlenecks is the Query Profile. The Query Profile provides a detailed breakdown of a query's execution plan, including each operation's time and resources consumed. It visualizes the steps involved in the query execution, highlighting areas that may be causing inefficiencies, such as full table scans, large joins, or operations that could benefit from optimization.

By examining the Query Profile, developers and database administrators can identify and troubleshoot performance issues, optimize query structures, and make informed decisions about potential schema or indexing changes to improve performance.
