

SOA-C02 Learning Materials & SOA-C02 Test Simulate & SOA-C02 Best Questions

BONUS!!! Download part of Exam4PDF SOA-C02 dumps for free: <https://drive.google.com/open?id=10Ixo4jYhOu5WWAOcyVIV8ZilxLka944J>

Our Amazon SOA-C02 exam guide has not equivocal content that may confuse exam candidates. All question points of our AWS Certified SysOps Administrator - Associate (SOA-C02) SOA-C02 study quiz can dispel your doubts clearly. Get our AWS Certified SysOps Administrator - Associate (SOA-C02) SOA-C02 Certification actual exam and just make sure that you fully understand it and study every single question in it by heart.

Exam4PDF's senior team of experts has developed training materials for Amazon SOA-C02 exam. Through Exam4PDF's training and learning passing Amazon certification SOA-C02 exam will be very simple. Exam4PDF can 100% guarantee you pass your first time to participate in the Amazon Certification SOA-C02 Exam successfully. And you will find that our practice questions will appear in your actual exam. When you choose our help, Exam4PDF can not only give you the accurate and comprehensive examination materials, but also give you a year free update service.

Quiz 2025 Amazon SOA-C02 Pass-Sure Valid Braindumps Questions

We provide online customer service to the customers for 24 hours per day and we provide professional personnel to assist the client in the long distance online. If you have any questions and doubts about the AWS Certified SysOps Administrator - Associate (SOA-C02) guide torrent we provide before or after the sale, you can contact us and we will send the customer service and the professional personnel to help you solve your issue about using SOA-C02 Exam Materials. If the clients have any problems or doubts about our SOA-C02 exam materials you can contact us by sending mails or contact us online and we will reply and solve the client's problems as quickly as we can.

Amazon AWS Certified SysOps Administrator - Associate (SOA-C02) Sample Questions (Q348-Q353):

NEW QUESTION # 348

A company's public website is hosted in an Amazon S3 bucket in the us-east-1 Region behind an Amazon CloudFront distribution. The company wants to ensure that the website is protected from DDoS attacks. A SysOps administrator needs to deploy a solution that gives the company the ability to maintain control over the rate limit at which DDoS protections are applied. Which solution will meet these requirements?

- A. Deploy a global-scoped AWS WAF web ACL with a block default action. Configure an AWS WAF rate-based rule to allow matching traffic. Associate the web ACL with the CloudFront distribution.
- B. Deploy an AWS WAF web ACL with an allow default action in us-east-1. Configure an AWS WAF rate-based rule to block matching traffic. Associate the web ACL with the S3 bucket.
- C. Deploy a global-scoped AWS WAF web ACL with an allow default action. Configure an AWS WAF rate-based rule to block matching traffic. Associate the web ACL with the CloudFront distribution.
- D. Deploy an AWS WAF web ACL with a block default action in us-east-1. Configure an AWS WAF rate-based rule to

allow matching traffic. Associate the web ACL with the S3 bucket.

Answer: C

Explanation:

AWS WAF (Web Application Firewall) helps protect your web applications from common web exploits and bots. A rate-based rule allows you to control the rate of requests to your application.

Create a Global-Scoped AWS WAF Web ACL:

Navigate to the AWS WAF console.

Create a new Web ACL and choose "Global" for the scope.

Set the default action to "Allow".

Configure a Rate-Based Rule:

Within the Web ACL, add a new rule and select "Rate-based rule".

Define the rate limit (e.g., 2000 requests per 5 minutes).

Set the action to "Block".

Associate Web ACL with CloudFront Distribution:

After creating the Web ACL and rule, go to your CloudFront distribution settings.

In the "General" tab, associate the Web ACL with your CloudFront distribution.

Review and Confirm:

Review the configuration and ensure the Web ACL is correctly associated with the CloudFront distribution.

Associating AWS WAF with CloudFront

NEW QUESTION # 349

A company runs an application that uses a MySQL database on an Amazon EC2 instance. The EC2 instance has a General Purpose SSD Amazon Elastic Block Store (Amazon EBS) volume. The company made changes to the application code and now wants to perform load testing to evaluate the impact of the code changes.

A SysOps administrator must create a new MySQL instance from a snapshot of the existing production instance. This new instance needs to perform as similarly as possible to the production instance.

Which restore option meets these requirements?

- A. Use EBS snapshot restore to create a new Provisioned IOPS SSD EBS volume from the production snapshot.
- B. Use EBS snapshot restore to create a new General Purpose SSD EBS volume from the production snapshot.
- **C. Use EBS fast snapshot restore to create a new General Purpose SSD EBS volume from the production snapshot.**
- D. Use EBS fast snapshot restore to create a new Provisioned IOPS SSD EBS volume from the production snapshot.

Answer: C

Explanation:

<https://docs.aws.amazon.com/AWSEC2/latest/UserGuide/ebs-fast-snapshot-restore.html>

NEW QUESTION # 350

A SysOps administrator manages an Auto Scaling group of Amazon EC2 instances for an application. Each instance requires a significant amount of dynamic configuration at boot time.

The configurations cannot be added to a custom Amazon Machine Image (AMI). The configuration requirements have resulted in significant delays before each EC2 instance is ready to serve users.

The SysOps administrator needs to reduce the amount of time required to scale to meet increased demand on the application.

Which solution will meet this requirement?

- A. Use Spot Instances when the application load is high.
- B. Add an additional Availability Zone to the Auto Scaling group.
- **C. Add a warm pool of instances to the Auto Scaling group.**
- D. Increase the scaling plan's warmup period to improve instance boot times.

Answer: C

Explanation:

A warm pool keeps EC2 instances pre-initialized with your dynamic boot configuration, so they can enter service quickly when

scaling out - dramatically cutting readiness time without changing the AMI.

NEW QUESTION # 351

A company's SysOps administrator needs to troubleshoot an AWS Lambda function that runs in a private subnet in a VPC. The company has enabled Lambda Insights logging in the Lambda environment. However, there are no Lambda Insights logs for the Lambda function.

The SysOps administrator has confirmed that the Lambda function's execution role has the correct permissions. The Lambda function cannot have public connectivity.

What should the SysOps administrator do to make Lambda Insights logging work correctly?

- **A. Configure a VPC endpoint to direct traffic to Amazon CloudWatch Logs.**
- B. Add an internet gateway to the VPC. Ensure that the private subnet has a route through the internet gateway to access AWS services.
- C. Add a NAT gateway to a public subnet that has access to the internet. Change the private subnet for the Lambda function to route internet traffic to the NAT gateway.
- D. Change the security group that is associated with the Lambda function to reference AWS managed prefix lists.

Answer: A

Explanation:

When a Lambda function runs in a private subnet without public connectivity, it cannot access public endpoints by default. Since Lambda Insights sends its logs to Amazon CloudWatch Logs, the Lambda function needs network access to CloudWatch Logs. Configuring a VPC endpoint for CloudWatch Logs allows the Lambda function to send logs to CloudWatch without requiring public internet connectivity, thereby making Lambda Insights logging work correctly.

NEW QUESTION # 352

A development team created and deployed a new AWS Lambda function 15 minutes ago. Although the function was invoked many times, Amazon CloudWatch Logs are not showing any log messages.

What is one cause of this?

- **A. The Lambda function's role does not include permissions to create CloudWatch Logs items.**
- B. The Lambda function creates local log files that have to be shipped to CloudWatch Logs first before becoming visible.
- C. The Lambda function raises an exception before the first log statement has been reached.
- D. The developers did not enable log messages for this Lambda function.

Answer: A

Explanation:

If AWS Lambda function logs are not appearing in Amazon CloudWatch, it is typically due to insufficient permissions:

IAM Role Permissions: The execution role assigned to the Lambda function must have the necessary permissions to interact with CloudWatch Logs. This includes actions like `logs:CreateLogGroup`, `logs:CreateLogStream`, and `logs:PutLogEvents`.

Check and Update Role: Verify that the IAM role used by the Lambda function includes a policy granting these permissions. If not, update the role to include these permissions.

Log Group and Stream: With the appropriate permissions, the Lambda function will be able to create or use a log group and stream in CloudWatch Logs and publish log messages accordingly.

Ensuring the Lambda function has the correct permissions is essential for diagnostics and monitoring, allowing log data to be captured and reviewed in CloudWatch Logs.

NEW QUESTION # 353

.....

It is not easy for you to make a decision of choosing the SOA-C02 prep guide from our company, because there are a lot of study materials about the exam in the market. However, if you decide to buy the SOA-C02 test practice files from our company, we are going to tell you that it will be one of the best decisions you have made in recent years. As is known to us, the SOA-C02 Preparation materials from our company are designed by a lot of famous experts and professors in the field. There is no doubt that the SOA-C02 prep guide has the high quality beyond your imagination.
