

# SOA-C02 PDF Guide Valid Questions Pool Only at PassReview

## A Comprehensive Guide to SOA-C02 Practice Questions and Answers

Are you gearing up to take the AWS Certified SysOps Administrator - Associate (SOA-C02) exam? If so, you are in the proper location. More than just academic proficiency is needed to succeed on this difficult certification exam; instead, advance preparation is required. In this article, we'll explore the vital role that [SOA-C02 practice questions](#) play in your journey to AWS certification success.

**The Importance of Practice Questions:** SOA-C02 practice questions are invaluable tools for several reasons. They mimic the format and style of the actual exam, providing a realistic testing experience. Moreover, they allow you to assess your current knowledge, identify weak areas, and track your progress over time.

**Choosing the Right Practice Questions:** Not all practice questions are created equal. It's essential to select reputable sources that offer up-to-date, relevant, and accurate questions. We'll discuss some trusted platforms and resources for accessing SOA-C02 practice questions.

**Incorporating Practice Questions into Your Study Plan:** To make the most of SOA-C02 practice questions, you need a structured study plan. We'll outline a step-by-step approach to effectively integrate these questions into your preparation routine.

BTW, DOWNLOAD part of PassReview SOA-C02 dumps from Cloud Storage: <https://drive.google.com/open?id=1iN8hyuvc5nN21STaZTDQnOrUO6OPAaby>

At PassReview, we offer a SOA-C02 dumps PDF, desktop Amazon SOA-C02 practice test software, and a web-based practice exam which is specifically designed to help you prepare for your Amazon SOA-C02 Certification Exam. Whether you are looking for real Amazon SOA-C02 dumps pdf file or practice exams to help you master the Amazon SOA-C02 exam, we have got you covered.

With the rapid development of our society, most of the people choose express delivery to save time. Our delivery speed is also highly praised by customers. Our SOA-C02 exam dumps won't let you wait for a long time. As long as you pay at our platform, we will deliver the relevant SOA-C02 test prep to your mailbox within 5-10 minutes. Our company attaches great importance to overall services, if there is any problem about the delivery of SOA-C02 Test Braindumps, please let us know, a message or an email will be available. And our SOA-C02 exam questions can help you pass the exam in the shortest time.

## SOA-C02 Free Brain Dumps, Latest SOA-C02 Exam Cram

SOA-C02 certification is more and more important for this area, but the exam is not easy for many candidates. Our SOA-C02 practice materials make it easier to prepare exam with a variety of high quality functions. Their quality function is observably clear once you download them. We have three kinds of SOA-C02 practice materials moderately priced for your reference. All these three types of SOA-C02 practice materials win great support around the world and all popular according to their availability of

goods, prices and other term you can think of. Just come and buy them!

## Amazon AWS Certified SysOps Administrator - Associate (SOA-C02) Sample Questions (Q602-Q607):

### NEW QUESTION # 602

A gaming application is deployed on four Amazon EC2 instances in a default VPC. The SysOps administrator has noticed consistently high latency in responses as data is transferred among the four instances. There is no way for the administrator to alter the application code.

The MOST effective way to reduce latency is to relaunch the EC2 instances in:

- A. a single subnet inside the VPC.
- B. a dedicated VPC.
- C. a placement group.
- D. a single Availability Zone.

**Answer: C**

Explanation:

To reduce latency in data transfer among EC2 instances, especially in high-performance computing (HPC) applications or applications requiring low network latency, using a placement group is the best approach:

\* Understanding Placement Groups:

\* A placement group in Amazon EC2 is a logical grouping of instances within a single Availability Zone. Using placement groups, you can achieve low-latency network performance necessary for tightly coupled node-to-node communication.

\* Types of Placement Groups:

\* Cluster Placement Group: Instances are physically located close together in the same Availability Zone to provide low-latency network performance.

\* Partition Placement Group: Instances are divided into logical segments called partitions, reducing the likelihood of simultaneous failures.

\* Spread Placement Group: Instances are placed on distinct underlying hardware to reduce correlated failures.

\* Creating and Using a Placement Group:

\* You can create a placement group using the AWS Management Console, AWS CLI, or AWS SDKs.

\* When launching instances, specify the placement group to ensure they are launched within the same group.

```
aws ec2 create-placement-group --group-name my-placement-group --strategy cluster aws ec2 run-instances --image-id ami-12345678 --count 4 --instance-type c5.large --placement GroupName=my-placement-group
```

\* Relocating Existing Instances:

\* Stop the instances, modify the placement group settings, and then restart them. Note that not all instance types are supported within placement groups, so check the documentation for compatibility.

References:

\* Placement Groups

\* Cluster Instances for Low-Latency

### NEW QUESTION # 603

While setting up an AWS managed VPN connection, a SysOps administrator creates a customer gateway resource in AWS. The customer gateway device resides in a data center with a NAT gateway in front of it. What address should be used to create the customer gateway resource?

- A. The public IP address of the customer gateway device
- B. The private IP address of the customer gateway device
- C. The public IP address of the NAT device in front of the customer gateway device
- D. The MAC address of the NAT device in front of the customer gateway device

**Answer: C**

Explanation:

When setting up an AWS managed VPN connection and creating a customer gateway resource, if the customer gateway device resides behind a NAT device, you should use the public IP address of the NAT device. This is because the VPN connection from AWS will be established to the public IP address that AWS can reach.

\* Identify the Public IP Address of the NAT Device:

- \* Determine the public IP address assigned to the NAT device in front of the customer gateway.
  - \* Create Customer Gateway Resource:
  - \* Navigate to the VPC console in the AWS Management Console.
  - \* In the navigation pane, choose "Customer Gateways" and then click "Create Customer Gateway".
  - \* Enter a name for the customer gateway.
  - \* For the "IP Address", enter the public IP address of the NAT device.
  - \* Configure VPN Connection:
  - \* Create a VPN connection by navigating to the "VPN Connections" section and clicking "Create VPN Connection".
  - \* Select the created customer gateway and complete the VPN setup wizard.
  - \* Update Routing and Configuration:
  - \* Ensure that the routing configurations on both the AWS side and the on-premises side are updated to route traffic through the VPN connection.
  - \* Configure the customer gateway device (behind the NAT) to accept traffic from the NAT device and route it appropriately.
- AWS Managed VPN Connections  
Customer Gateway Resource

#### NEW QUESTION # 604

A company has a core application that must run 24 hours a day, 7 days a week. The application uses Amazon EC2, AWS Fargate, and AWS Lambda. The company uses a combination of operating systems across different AWS Regions. The company needs to maximize cost savings while committing to a pricing model that offers flexibility to make changes. What should the company do to meet these requirements?

- A. Use EC2 Spot Instances that match the type and size of existing instances that run in each Region.
- **B. Purchase a Compute Savings Plan that is based on Savings Plans recommendations.**
- C. Purchase an EC2 Instance Savings Plan that covers the EC2 instance types and the Fargate and Lambda compute equivalents.
- D. Purchase a Reserved Instance for the instance types, operating systems. Region, and tenancy.

**Answer: B**

Explanation:

The Compute Savings Plan is the most flexible pricing model among AWS's long-term commitment options.

It allows the company to commit to a consistent amount of usage (measured in \$/hour) for a 1- or 3-year term, and in return, it offers significant savings over On-Demand pricing.

From the AWS Savings Plans Documentation:

Compute Savings Plans provide the most flexibility and apply to any EC2 instance regardless of region, instance family, operating system, or tenancy, and also apply to AWS Fargate and AWS Lambda usage.

This exactly matches the company's needs:

- \* Uses EC2, Fargate, and Lambda
- \* Operates in multiple regions and OS types
- \* Requires cost savings with flexibility for changes

# Why the other options are incorrect:

- \* B. EC2 Instance Savings Plans only apply to specific instance families within a region and do not apply to Lambda or Fargate.
- \* C. Reserved Instances are very rigid - tied to instance type, OS, region, and tenancy. Not ideal for changing environments.
- \* D. Spot Instances offer savings but are not suitable for 24/7 core applications, as they can be interrupted.

#### NEW QUESTION # 605

An application runs on multiple Amazon EC2 instances in an Auto Scaling group. The Auto Scaling group is configured to use the latest version of a launch template. A SysOps administrator must devise a solution that centrally manages the application logs and retains the logs for no more than 90 days. Which solution will meet these requirements?

- A. Update the launch template user data to install and configure the Amazon CloudWatch Logs agent to send logs to a log group. Set the log rotation configuration of the EC2 instances to 90 days.
- B. Launch an Amazon Machine Image (AMI) that is preconfigured with the Amazon CloudWatch Logs agent to send logs to an Amazon S3 bucket. Apply a 90-day S3 Lifecycle policy on the S3 bucket to expire the application logs.
- C. Launch an Amazon Machine Image (AMI) that is preconfigured with the Amazon CloudWatch Logs agent to send logs to a log group. Create an Amazon EventBridge (Amazon CloudWatch Events) scheduled rule to perform an instance refresh every 90 days.

- D. Update the launch template user data to install and configure the Amazon CloudWatch Logs agent to send logs to a log group. Configure the retention period on the log group to be 90 days

**Answer: D**

#### NEW QUESTION # 606

A SysOps administrator needs to implement a monitoring system to collect instance metrics every minute for an application. The application runs on a highly available pair of Amazon EC2 instances. The monitoring system must send an email alert when the metrics exceed a predefined threshold.

Which solution will meet these requirements?

- A. Use the AWS Health Dashboard to extract the instance metrics. Configure Amazon EventBridge to detect and react to changes in the metrics and to send email alerts.
- B. Use AWS CloudTrail to monitor the instances. Copy the logs to an Amazon S3 bucket. Configure an AWS Lambda function to send email alerts based on the logs from the S3 bucket.
- C. Use detailed monitoring in Amazon CloudWatch for the instance metrics. Configure CloudWatch alarms that use Amazon Simple Notification Service (Amazon SNS) to send email alerts.
- D. Use basic monitoring in Amazon CloudWatch for the instance metrics. Configure CloudWatch alarms that use Amazon Simple Notification Service (Amazon SNS) to send email alerts.

**Answer: C**

Explanation:

CloudWatch detailed monitoring publishes EC2 metrics at 1-minute intervals. You can then set CloudWatch alarms to trigger an SNS email when thresholds are crossed-meeting both the granularity and alerting needs.

#### NEW QUESTION # 607

.....

The PassReview is a leading and trusted platform that has been assisting the SOA-C02 exam candidates since its beginning. Over this long time period, PassReview has helped countless candidates in their preparation and enabled them to pass the final SOA-C02 Exam easily. The PassReview offers real, valid, and updated Amazon Exam Questions.

**SOA-C02 Free Brain Dumps:** [https://www.passreview.com/SOA-C02\\_exam-braindumps.html](https://www.passreview.com/SOA-C02_exam-braindumps.html)

SOA-C02 training materials can help you achieve this goal faster, Amazon SOA-C02 PDF Guide Students, who got failed, even after struggling hard to pass the exams by using our preparation material, are advised to claim our money back guarantee, Amazon SOA-C02 PDF Guide They are not born with innate super power, You can pay attention to our website, once there has a discount, you can join in and purchase high pass-rate SOA-C02 Free Brain Dumps - AWS Certified SysOps Administrator - Associate (SOA-C02) test dumps at a lower price.

New releases, features, and innovations follow the lifetime Test SOA-C02 Voucher of a product or service, In this chapter you'll learn how to create, customize, and manage tables in presentations.
