- C. span
- D. bin

Answer: C

The span argument is used to specify the interval (or bin size) for the _time field.

Example usage:

```
index=_internal | timechart span=1h count

This command will create a timechart where _time is grouped into 1-hour intervals.

by is used to split results by a specific field but does not define the interval.

You can use tags to simplify your searches by replacing long or complex field names or values with short and simple tags². To search for a tag associated with a value on a specific field, you can use the following syntax: tag:<field>=<tagname>².
