Splunk SPLK-1002 Latest Exam Notes - SPLK-1002 Accurate Answers

If you prefer to prepare for your exam on paper, then our SPLK-1002 exam materials will be your best choice. SPLK-1002 PDF version is convenient to read and printable, and you can take them with you, and you can practice them anywhere and anyplace. Besides, free demo for SPLK-1002 PDF version is available, and you can try before buying. We are pass guarantee and money back guarantee and if you fail to pass the exam. You can receive the downloading link and password for SPLK-1002 Training Materials within ten minutes for SPLK-1002 exam materials, if you don't receive, you can contact with us, and we will solve the problem for you.

Splunk Core Certified Power User Exam Sample Questions (Q95-Q100):

NEW QUESTION # 95

Based on the macro definition shown below, what is the correct way to execute the macro in a search string?

Name *
Enter the name of the macro. If the search macro takes an argument, indicate this by appending the number of arguments to the name. For example: mymacro(2)

convert_sales(3)

Definition *
Enter the string the search macro expands to when it is referenced in another search. If arguments are included, enclose them in dollar signs. For example: \$arg1\$

```
stats sum(price) as USD by product_name
| eval $currency$="$symbol$,round(USD*$rate$,2),
"commas" | eval USD="$" + tostring(USD,"commas")
```

☐ Use eval-based definition?

Arguments
Enter a comma-delimited string of argument names. Argument names may only contain alphanumeric, '_' and '-' characters.

currency,symbol,rate

- A. Convert_sales (\$euro,\$€\$,s79\$
- **B. Convert_sales (euro, €, .79)**
- C. Convert_sales (euro, €, 79)"
- D. Convert_sales (\$euro, \$€\$,S,79\$)

Answer: B

Explanation:

Reference: <https://docs.splunk.com/Documentation/Splunk/8.0.3/Knowledge/Usesearchmacros> The correct way to execute the macro in a search string is to use the format macro_name(\$arg1\$, \$arg2\$, ...) where \$arg1\$, \$arg2\$, etc. are the arguments for the macro. In this case, the macro name is convert_sales and it takes three arguments: currency, symbol, and rate. The arguments are enclosed in dollar signs and separated by commas. Therefore, the correct way to execute the macro is convert_sales(\$euro\$, \$€\$, .79).

NEW QUESTION # 96

Information needed to create a GET workflow action includes which of the following? (select all that apply.)

- **A. A URI where the user will be directed at search time.**
- **B. A label that will appear in the Event Action menu at search time.**
- C. A name for the URI where the user will be directed at search time.
- D. A name of the workflow action

Answer: A,B

Explanation:

Reference:

<https://docs.splunk.com/Documentation/Splunk/8.0.3/Knowledge/SetupaGETworkflowaction>

NEW QUESTION # 97

Which of the following can a field alias be applied to?

- A. Indexes

- B. Sourcetypes
- C. Event types
- D. Tags

Answer: B

Explanation:

Field aliases in Splunk are used to map field names in event data to alternate names to make them easier to understand or consistent across datasets.

Option A (Tags): Field aliases are not directly applied to tags. Tags are used for categorizing events or field values.

Option B (Indexes): Field aliases cannot be applied to indexes. Indexes are physical storage locations for events in Splunk.

Option C (Sourcetypes): This is correct. Field aliases can be defined at the sourcetype level to ensure consistent naming across events of the same sourcetype.

Option D (Event types): Event types are saved searches, and field aliases do not apply here directly.

Reference:

Splunk Docs: Field Aliases

NEW QUESTION # 98

How is an event type created from the search window? (select all that apply)

- A. Add | eventtype to the SPL and execute the search.
- B. Edit eventtypes.conf and add a new stanza.
- C. In an event's detail dropdown, click Event Actions > Build Event Type.
- D. In the top right corner, click Save As > Event Type.

Answer: B,D

Explanation:

In Splunk, you can create an event type from the search window by running a search that would make a good event type, then clicking Save As and selecting Event Type1. This opens the Save as Event Type dialog, where you can provide the event type name and optionally apply tags to it1.

You can also create an event type by editing the eventtypes.conf file and adding a new stanza1. Each stanza in the eventtypes.conf file represents an event type1. The stanza name is the name of the event type, and the search attribute specifies the search string that defines the event type1.

It's important to note that while you can use the eventtype command in a search to find events associated with a specific event type, adding | eventtype to the SPL and executing the search does not create a new event type1. Similarly, clicking Event Actions > Build Event Type in an event's detail dropdown does not create a new event type1.

NEW QUESTION # 99

Where are the results of eval commands stored?

- A. In an index.
- B. In a database.
- C. In a KV Store.
- D. In a field.

Answer: D

Explanation:

Explanation

<https://docs.splunk.com/Documentation/Splunk/8.0.2/SearchReference/Eval> The eval command calculates an expression and puts the resulting value into a search results field.

* If the field name that you specify does not match a field in the output, a new field is added to the search results.

* If the field name that you specify matches a field name that already exists in the search results, the results of the eval expression overwrite the values in that field.

NEW QUESTION # 100

Dumps4PDF offers updated and real Splunk SPLK-1002 Exam Dumps for Splunk Core Certified Power User Exam (SPLK-1002) test takers who want to prepare quickly for the SPLK-1002 examination.
