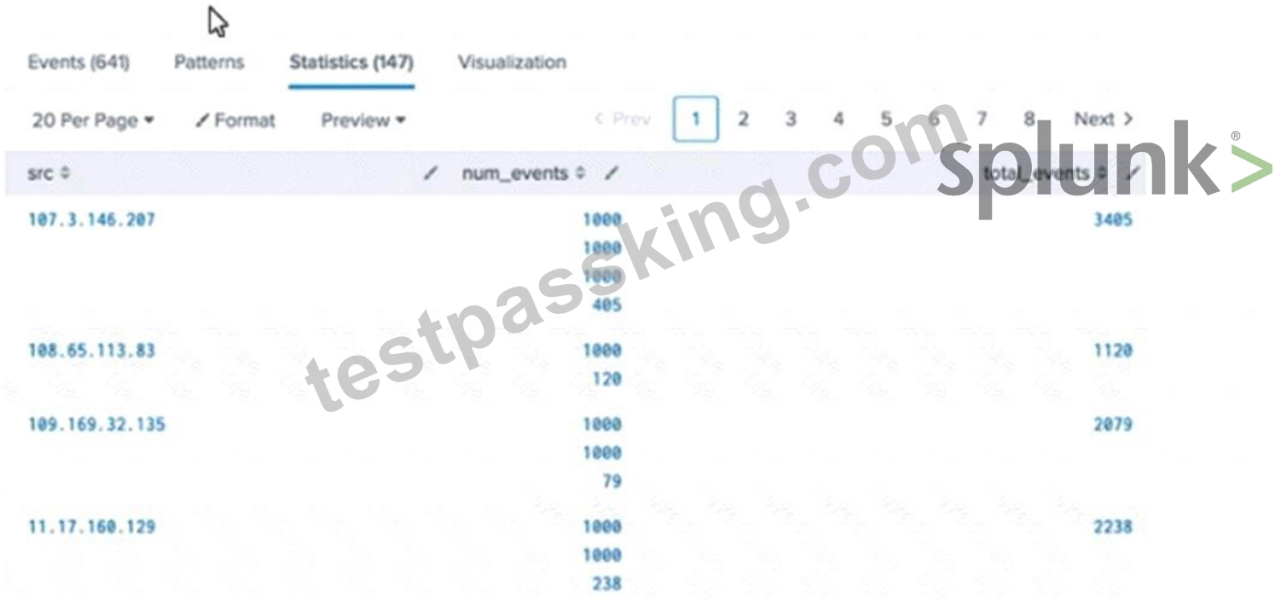
Get Updated Splunk SPLK-1002 Dumps For Guaranteed Success

If you want to make your IT dream come true, you just need to choose the professional training materials. TestPassKing is a professional website to provide IT certification training materials. Our SPLK-1002 exam training materials is the result of TestPassKing's experienced IT experts with constant exploration, practice and research for many years. After you purchase our SPLK-1002 Dumps PDF training materials, we will provide one year free renewal service.

Splunk Core Certified Power User Exam Sample Questions (Q104-Q109):

NEW QUESTION # 104
Why would the following search produce multiple transactions instead of one?

```
index=security sourcetype=linux_secure failed earliest=-60d@d latest=-1d@d
| transaction src_ip
| stats list(eventcount) as num_events sum(eventcount) as total_events by src_ip
```



- A. The stats list () function is used.
- B. The transaction and commands cannot be used together.
- C. The maxspan option is not included.
- D. The transaction command has a limit of 1000 events per transaction.

Answer: C

Explanation:
In Splunk, the transaction command is used to group events that share common characteristics into a single transaction1. By default, the transaction command groups all matching events into a single transaction1.
However, you can use the maxspan option to limit the time span of the transactions1. If the time span between the first and last event in a transaction exceeds the maxspan value, the transaction command will start a new transaction1.
Therefore, if the maxspan option is not included in the search, the transaction command might produce multiple transactions instead of one if the time span between the first and last event in a transaction exceeds the default maxspan value1.
Here is an example of how you can use the maxspan option in a search:
index=main sourcetype=access_combined | transaction someuniqefield maxspan=1h In this search, the transaction command groups events that share the same someuniqefield value into a single transaction, but only if the time span between the first and last event in the transaction does not exceed 1 hour1. If the time span exceeds 1 hour, the transaction command will start a new transaction1.

NEW QUESTION # 105
Which of the following statements describe the search string below?
| datamodel Application_State All_Application_State search

- A. No events will be returned because the pipe should occur after the datamodel command
- B. Evenrches would return a report of sales by state.
- C. Events will be returned from the data model named Application_State.
- D. Events will be returned from the data model named All_Application_state.

Answer: C

Explanation:
The search string below returns events from the data model named Application_State.
| datamodel Application_State All_Application_State search
The search string does the following:
* It uses the datamodel command to access a data model in Splunk. The datamodel command takes two arguments: the name of the data model and the name of the dataset within the data model.
* It specifies the name of the data model as Application_State. This is a predefined data model in Splunk that contains information about web applications.
* It specifies the name of the dataset as All_Application_State. This is a root dataset in the data model that contains all events from all child datasets.
* It uses the search command to filter and transform the events from the dataset. The search command can
* use any search criteria or command to modify the results.
Therefore, the search string returns events from the data model named Application_State.

NEW QUESTION # 106
A user wants to convert numeric field values to strings and also to sort on those values.
Which command should be used first, the eval or the sort?

- A. Convert the numeric to a string with eval first, then sort.
- B. You cannot use the sort command and the eval command on the same field.
- C. Use sort first, then convert the numeric to a string with eval.
- D. It doesn't matter whether eval or sort is used first.

Answer: A

NEW QUESTION # 107
The macro weekly_sales (2) contains the search string:

index-games I eval Product Sales = $price$ $AmountS01d$
Which of the following will return results?

- A. 'weekly_sales(3.99, 10) '
- B. 'weekly_sales(3)
- C. 'weekly_sales (3.99, 10)
- D. 'weekly_sales(3.99, 10)

Answer: C

Explanation:
Explanation
The correct answer is C. 'weekly_sales (3.99, 10)'. This is because search macros accept arguments without quotation marks or dollar signs, and the number of arguments must match the number of parameters defined in the macro. The other options are incorrect because they either use quotation marks or dollar signs around the arguments, or they provide a different number of arguments than the macro expects. You can learn more about how to use search macros in searches from the Splunk documentation1.

NEW QUESTION # 108
Which of the following is true about data model attributes?

- A. They cannot be edited if inherited from a parent dataset.
- B. They can be added to a dataset from search time field extractions.
- C. They can only be added into a root search dataset.
- D. They cannot be created within the data model.

Answer: B

Explanation:
Data model attributes are fields that are added to a dataset from search time field extractions, calculated fields, lookups, or aliases. They can be created within the data model editor or inherited from a parent dataset. They can be edited or removed unless they are required by the data model. They can be added to any type of dataset, not just root search datasets.ReferencesSee About data models, [Define data model attributes], and [Edit data model datasets] in the Splunk Documentation.

NEW QUESTION # 109
.....

TestPassKing is a website engaged in the providing customer SPLK-1002 VCE Dumps and makes sure every candidates passing actual test easily and quickly. We have a team of IT workers who have rich experience in the study of Splunk dumps torrent and they check the updating of Splunk top questions everyday to ensure the accuracy of exam collection.
