Reliable Splunk SPLK-4001 Related Content & The Best TestInsides - Leading Provider in Qualification Exams

Our Splunk Exam Questions greatly help Splunk O11y Cloud Certified Metrics User (SPLK-4001) exam candidates in their preparation. Our SPLK-4001 practice questions are designed and verified by prominent and qualified Splunk O11y Cloud Certified Metrics User (SPLK-4001) exam dumps preparation experts. The qualified Splunk O11y Cloud Certified Metrics User (SPLK-

4001) exam questions preparation experts strive hard and put all their expertise to ensure the top standard and relevancy of SPLK-4001 exam dumps topics.

Splunk O11y Cloud Certified Metrics User Sample Questions (Q30-Q35):

NEW QUESTION # 30
Which of the following statements are true about the datatable on a chart? (select all that apply)

- A. A user can choose which of the output dimensions are displayed.
- B. By default all dimensions on the output signal are displayed.
- C. Properties cannot be displayed.
- D. By default all metadata on the output signal are displayed.

Answer: A,B

NEW QUESTION # 31
Which of the following can be configured when subscribing to a built-in detector?

- A. Alerts on team landing page.
- B. Links to a chart.
- C. Alerts on a dashboard.
- D. Outbound notifications.

Answer: D

Explanation:
According to the web search results1, subscribing to a built-in detector is a way to receive alerts and notifications from Splunk Observability Cloud when certain criteria are met. A built-in detector is a detector that is automatically created and configured by Splunk Observability Cloud based on the data from your integrations, such as AWS, Kubernetes, or OpenTelemetry1. To subscribe to a built-in detector, you need to do the following steps:
Find the built-in detector that you want to subscribe to. You can use the metric finder or the dashboard groups to locate the built-in detectors that are relevant to your data sources1.
Hover over the built-in detector and click the Subscribe button. This will open a dialog box where you can configure your subscription settings1.
Choose an outbound notification channel from the drop-down menu. This is where you can specify how you want to receive the alert notifications from the built-in detector. You can choose from various channels, such as email, Slack, PagerDuty, webhook, and so on2. You can also create a new notification channel by clicking the + icon2.
Enter the notification details for the selected channel. This may include your email address, Slack channel name, PagerDuty service key, webhook URL, and so on2. You can also customize the notification message with variables and markdown formatting2.
Click Save. This will subscribe you to the built-in detector and send you alert notifications through the chosen channel when the detector triggers or clears an alert.
Therefore, option C is correct.

NEW QUESTION # 32
What Pod conditions does the Analyzer panel in Kubernetes Navigator monitor? (select all that apply)

- A. Unknown
- B. Not Scheduled
- C. Pending
- D. Failed

Answer: A,B,C,D

Explanation:
Explanation
The Pod conditions that the Analyzer panel in Kubernetes Navigator monitors are:
Not Scheduled: This condition indicates that the Pod has not been assigned to a Node yet. This could be due to insufficient resources, node affinity, or other scheduling constraints1 Unknown: This condition indicates that the Pod status could not be obtained or is not known by the system. This could be due to communication errors, node failures, or other unexpected situations1

Failed: This condition indicates that the Pod has terminated in a failure state. This could be due to errors in the application code, container configuration, or external factors1 Pending: This condition indicates that the Pod has been accepted by the system, but one or more of its containers has not been created or started yet. This could be due to image pulling, volume mounting, or network issues1 Therefore, the correct answer is A, B, C, and D.
To learn more about how to use the Analyzer panel in Kubernetes Navigator, you can refer to this documentation2.
1: https://kubernetes.io/docs/concepts/workloads/pods/pod-lifecycle/#pod-phase 2:
https://docs.splunk.com/observability/infrastructure/monitor/k8s-nav.html#Analyzer-panel

NEW QUESTION # 33
A customer is experiencing issues getting metrics from a new receiver they have configured in the OpenTelemetry Collector. How would the customer go about troubleshooting further with the logging exporter?

- A. Adding debug into the metrics receiver pipeline:

- B. Adding debug into the metrics exporter pipeline:

- C. Adding logging into the metrics receiver pipeline:

- D. Adding logging into the metrics exporter pipeline:

Answer: C

Explanation:
Explanation
The correct answer is B. Adding logging into the metrics receiver pipeline.
The logging exporter is a component that allows the OpenTelemetry Collector to send traces, metrics, and logs directly to the console. It can be used to diagnose and troubleshoot issues with telemetry received and processed by the Collector, or to obtain samples for other purposes1 To activate the logging exporter, you need to add it to the pipeline that you want to diagnose. In this case, since you are experiencing issues with a new receiver for metrics, you need to add the logging exporter to the metrics receiver pipeline. This will create a new plot that shows the metrics received by the Collector and any errors or warnings that might occur1
The image that you have sent with your question shows how to add the logging exporter to the metrics receiver pipeline. You can see that the exporters section of the metrics pipeline includes logging as one of the options.
This means that the metrics received by any of the receivers listed in the receivers section will be sent to the logging exporter as well as to any other exporters listed2 To learn more about how to use the logging exporter in Splunk Observability Cloud, you can refer to this documentation1.
1: https://docs.splunk.com/Observability/gdi/opentelemetry/components/logging-exporter.html 2:
https://docs.splunk.com/Observability/gdi/opentelemetry/exposed-endpoints.html

NEW QUESTION # 34
Which of the following chart visualization types are unaffected by changing the time picker on a dashboard?
(select all that apply)

- A. Single Value

- B. Line
- C. List
- D. Heatmap

Answer: A,C

Explanation:
Explanation
The chart visualization types that are unaffected by changing the time picker on a dashboard are:
Single Value: A single value chart shows the current value of a metric or an expression. It does not depend on the time range of the dashboard, but only on the data resolution and rollup function of the chart1 List: A list chart shows the values of a metric or an expression for each dimension value in a table format. It does not depend on the time range of the dashboard, but only on the data resolution and rollup function of the chart2 Therefore, the correct answer is A and D.
To learn more about how to use different chart visualization types in Splunk Observability Cloud, you can refer to this documentation3.
1: https://docs.splunk.com/Observability/gdi/metrics/charts.html#Single-value 2:
https://docs.splunk.com/Observability/gdi/metrics/charts.html#List 3:
https://docs.splunk.com/Observability/gdi/metrics/charts.html

NEW QUESTION # 35
.....

Our company TestInsides is glad to provide customers with authoritative study platform. Our SPLK-4001 quiz torrent was designed by a lot of experts and professors in different area in the rapid development world. At the same time, if you have any question on our SPLK-4001 exam questions, we can be sure that your question will be answered by our professional personal in a short time. In a word, if you choose to buy our SPLK-4001 Quiz torrent, you will have the chance to enjoy the authoritative study platform provided by our company.
