

# SSE-Engineer Valid Exam Blueprint | Exam SSE-Engineer Discount

BONUS!!! Download part of ActualPDF SSE-Engineer dumps for free: [https://drive.google.com/open?id=1fJ\\_kzt8hiUIm4mXhRFWSVBgJxjgEVTca](https://drive.google.com/open?id=1fJ_kzt8hiUIm4mXhRFWSVBgJxjgEVTca)

We can't forget the advantages and the conveniences that reliable SSE-Engineer real preparation materials compiled by our companies bring to us. First, by telling our customers what the key points of learning, and which learning SSE-Engineer exam training questions is available, they may save our customers money and time. Our SSE-Engineer learning prep guides our customers in finding suitable jobs and other information as well. Secondly, a wide range of practice types and different versions of our SSE-Engineer exam training questions receive technological support through our expert team.

## Palo Alto Networks SSE-Engineer Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"><li>Prisma Access Planning and Deployment: This section of the exam measures the skills of Network Security Engineers and covers foundational knowledge and deployment skills related to Prisma Access architecture. Candidates must understand key components such as security processing nodes, IP addressing, DNS, and compute locations. It evaluates routing mechanisms including routing preferences, backbone routing, and traffic steering. The section also focuses on deploying Prisma Access service infrastructure for mobile users using VPN clients or explicit proxy and configuring remote networks. Additional topics include enabling private application access using service connections, Colo-Connect, and ZTNA connectors, implementing identity authentication methods like SAML, Kerberos, and LDAP, and deploying Prisma Access Browser for secure user access.</li></ul>

Topic 2	<ul style="list-style-type: none"> <li>Prisma Access Administration and Operation: This section of the exam measures the skills of IT Operations Managers and focuses on managing Prisma Access using Panorama and Strata Cloud Manager. It tests knowledge of multitenancy, access control, configuration, and version management, and log reporting. Candidates should be familiar with releasing upgrades and leveraging SCM tools like Copilot. The section also evaluates the deployment of the Strata Logging Service and its integration with Panorama and SCM, log forwarding configurations, and best practice assessments to maintain security posture and compliance.</li> </ul>
Topic 3	<ul style="list-style-type: none"> <li>Prisma Access Troubleshooting: This section of the exam measures the skills of Technical Support Engineers and covers the monitoring and troubleshooting of Prisma Access environments. It includes the use of Prisma Access Activity Insights, real-time alerting, and a Command Center for visibility. Candidates are expected to troubleshoot connectivity issues for mobile users, remote networks, service connections, and ZTNA connectors. It also focuses on resolving traffic enforcement problems including security policies, HIP enforcement, User-ID mismatches, and split tunneling performance issues.</li> </ul>
Topic 4	<ul style="list-style-type: none"> <li>Prisma Access Services: This section of the exam measures the skills of Cloud Security Architects and covers advanced features within Prisma Access. Candidates are assessed on how to configure and implement enhancements like App Acceleration, traffic replication, IoT security, and privileged remote access. It also includes implementing SaaS security and setting up effective policies related to security, decryption, and QoS. The section further evaluates how to create and manage user-based policies using tools like the Cloud Identity Engine and User ID for proper identity mapping and authentication.</li> </ul>

## Effective Way to Prepare for the Palo Alto Networks SSE-Engineer Certification Exam

Knowledge of the SSE-Engineer real study dumps contains are very comprehensive, not only have the function of online learning, also can help the user to leak fill a vacancy, let those who deal with qualification exam users can easily and efficient use of the SSE-Engineer question guide. By visit our website, the user can obtain an experimental demonstration, free after the user experience can choose the most appropriate and most favorite SSE-Engineer Exam Questions download. Users can not only learn new knowledge, can also apply theory into the actual problem, but also can leak fill a vacancy, can say such case selection is to meet, so to grasp the opportunity!

## Palo Alto Networks Security Service Edge Engineer Sample Questions (Q45-Q50):

### NEW QUESTION # 45

A customer using Prisma Access (Managed by Panorama) wants to monitor traffic patterns across all remote networks and use Strata Logging Service to gather insights on network usage. An engineer notices that some network data is missing from the Application Command Center (ACC).

What should the engineer do to ensure complete data visibility?

- A. Enable the Use Data for Pre-Defined Reports' setting in the Logging and Reporting configuration on Panorama.
- B. Verify that the Panorama web interface has been configured to aggregate logs from both the Panorama data and RN-SPNs.
- C. Ensure that log forwarding profiles are applied to all Prisma Access policies and directed to Strata Logging Service.
- D. Reconfigure the Prisma Access remote networks to log directly to Panorama instead of using Strata Logging Service.

**Answer: C**

Explanation:

For complete data visibility in Prisma Access (Managed by Panorama), log forwarding profiles must be applied to all security policies to ensure that traffic logs are correctly sent to Strata Logging Service. If log forwarding is missing or misconfigured, some traffic data may not appear in the Application Command Center (ACC), leading to incomplete insights. Verifying and correctly assigning log forwarding ensures that all relevant network activity is captured and available for analysis.

#### NEW QUESTION # 46

A user connected to Prisma Access reports that traffic intermittently is denied after matching a Catch-All Deny rule at the bottom and bypassing HIP-based policies. Refreshing VPN connection restores the access. What are two reasons for this behavior? (Choose two.)

- A. Firewall loses user mapping due to missed HIP report checks.
- B. User mapping is learned from sources other than gateway authentication.
- C. HIP-enforced policy is scheduled for certain hours of the day.
- D. 'Collect HIP data' needs to be enabled in the configuration.

**Answer: A,B**

Explanation:

User mapping learned from sources other than gateway authentication can cause intermittent access issues if it conflicts with the expected user identity used in HIP-based policies. If the firewall is associating the user with an outdated or incorrect mapping, traffic may not match the intended security policies, leading to denials by the Catch-All Deny rule.

If the firewall loses user mapping due to missed HIP report checks, the user may temporarily lose access to policies that require a valid Host Information Profile (HIP) match. When the VPN connection is refreshed, the HIP check is re-initiated, restoring access until the issue repeats.

#### NEW QUESTION # 47

A malicious user is attempting to connect to a blocked website by crafting a packet using a fake SNI and the correct website in the HTTP host header.

Which option will prevent this form of attack?

- A. Advanced Threat Prevention option to block "Domain Fronting"
- B. SSL Decryption to "Block sessions on SNI mismatch with Server Certificate (SAN/CN)"
- C. Advanced URL Filtering and block the "Malicious Behavior" category
- D. Advanced URL Filtering and block "SNI mismatch with Server Certificate (SAN/CN)"

**Answer: B**

Explanation:

This option ensures that SSL Decryption checks for mismatches between the Server Name Indication (SNI) field in the TLS handshake and the Common Name (CN) or Subject Alternative Name (SAN) in the server certificate. If a malicious user tries to bypass content filtering by spoofing the SNI while using the real blocked website in the HTTP host header, this setting will detect the discrepancy and block the session, preventing unauthorized access.

#### NEW QUESTION # 48

When a review of devices discovered by IoT Security reveals network routers appearing multiple times with different IP addresses, which configuration will address the issue by showing only unique devices?

- A. Merge individual devices into a single device with multiple interfaces.
- B. Create a custom role to merge devices with the same hostname and operating system.
- C. Delete all duplicate devices, keeping only those discovered using their management IP addresses.
- D. Add the duplicate entries to the ignore list in IoT Security.

**Answer: A**

Explanation:

When network routers appear multiple times with different IP addresses in IoT Security, it is likely because they have multiple interfaces with separate IPs. Merging these entries into a single device with multiple interfaces ensures that the system correctly identifies each router as a unique entity while maintaining visibility across all its interfaces. This approach prevents unnecessary duplicates, improves asset management, and enhances security monitoring.

#### NEW QUESTION # 49

What will cause a connector to fail to establish a connection with the cloud gateway during the deployment of a new ZTNA Connector in a data center?

- A. There is a misconfiguration in the DNS settings on the connector.
- B. The connector is using a dynamic IP address.
- C. There is a high latency in the network connection.
- **D. The connector is deployed behind a double NAT.**

**Answer: D**

Explanation:

AZTNA Connector requires a stable and direct connection to the cloud gateway. When the connector is deployed behind a double NAT (Network Address Translation), it can cause issues with reachability and session establishment because the cloud gateway may not be able to properly identify and communicate with the connector. Double NAT can interfere with secure tunneling, IP address resolution, and authentication mechanisms, leading to connection failures. To resolve this, the connector should be placed in a network segment with a single NAT or a public IP assignment.

## NEW QUESTION # 50

.....

Once you browse our official websites, you are bound to love our SSE-Engineer practice questions. All our SSE-Engineer study materials are displayed orderly on the web page. Also, you just need to click one kind; then you can know much about it. There have detailed introductions about the SSE-Engineer learnign braindumps such as price, version, free demo and so on. As long as you click on it, all the information will show up right away. It is quite convenient.
