Valid Test UiPath-ADAv1 Experience, Reliable UiPath-ADAv1 Exam Tips

As for buying UiPath-ADAv1 questions and answers for the exam, people may have different concerns. Most candidates can pass the exam by using the UiPath-ADAv1 questions and answers of us just one time, we ensure you that we will give you refund if you can't pass. Or if you have other exams to attend, we can replace other 2 valid exam dumps for you, at the same time, if UiPath-ADAv1 Questions and answers you buy updates, you can also get the latest version for free. You just need to send us the failure scanned, and we will replace the exam dumps or return your money to you.

UiPath Automation Developer Associate v1 Exam Sample Questions (Q186-Q191):

NEW QUESTION # 186

A developer intends to enter text into an input field using a combination of a string and a hotkey. The input action should take place within a hidden or minimized window.

Which input method(s) can be used individually for the Type Into activity?

- A. Same as App/Browser and Simulate.
- **B. Simulate and Window Messages.**
- C. Window Messages only.
- D. Simulate only.

Answer: B

Explanation:

Explanation

The Type Into activity is used to enter text in a specified UI element, such as a text box. It has three input methods that can be selected from the properties panel: Default, Simulate, and Window Messages¹. Each input method has different advantages and limitations, depending on the target application and the automation scenario².

The Default input method uses the hardware driver to simulate the keystrokes, as if a human user is typing on the keyboard. It is the most reliable and compatible input method, but it requires the target application to be in focus and visible on the screen. It also supports sending special keys, such as Tab or Enter, using brackets [k(enter)] or [k(tab)].

The Simulate input method uses the technology of the target application to directly inject the text into the UI element. It does not rely on the hardware driver, so it can work in the background, even if the target application is hidden or minimized. It also supports sending special keys using brackets [k(enter)] or [k(tab)]. However, it may not be compatible with some applications or UI elements that do not support this method.

The Window Messages input method uses the Windows API to send messages directly to the target application. It can also work in the background, even if the target application is hidden or minimized. It does not support sending special keys using brackets [k(enter)] or [k(tab)], but it can send them using modifiers such as {ENTER} or {TAB}. However, it may not be compatible with some applications or UI elements that do not accept window messages.

Therefore, if a developer intends to enter text into an input field using a combination of a string and a hotkey, and the input action should take place within a hidden or minimized window, they can use either the Simulate or the Window Messages input method individually for the Type Into activity. They cannot use the Default input method, because it requires the target application to be in focus and visible on the screen. They also cannot use the Same as App/Browser input method, because it is not an option for the Type Into activity.

NEW QUESTION # 187

A project built using REFramework pulls phone numbers from a database of employees and creates queue items for each one. Following processing, these elements must be added to a financing application. The queue item holding a phone number becomes invalid if a digit is accidentally left out because of a human mistake. As a requirement, queue items that contain partial numbers should not be accepted.

What type of error should be thrown according to best practices?

- A. Fatal Exception
- B. System Exception
- **C. Business Exception**
- D. Application Exception

Answer: C

NEW QUESTION # 188

Where can a process be found, after being published from UiPath Studio and deployed as an automation in Orchestrator?

- A. Snippets Panel
- B. Manage Packages
- C. Resources Panel
- **D. UiPath Assistant**

Answer: D

Explanation:

A process can be found in the UiPath Assistant after being published from UiPath Studio and deployed as an automation in Orchestrator. UiPath Assistant is a desktop tool that enables users to easily access, manage, and run automation workflows on their machines. It displays all the available automations that the user can run, either from Orchestrator or locally. To run an automation from Orchestrator, the user needs to connect the UiPath Assistant to Orchestrator and synchronize the automations and settings with the cloud. The user can also add automations to the launchpad for quick and easy access, create custom folders and sections to organize the automations, view the status and progress of the running automations, and access the help and feedback options.

NEW QUESTION # 189

What user category is the UiPath StudioX profile best suited for, as opposed to the UiPath Studio profile?

- **A. Business users looking to automate tasks for themselves and their immediate teams.**
- B. Developers looking to build complex unattended or attended process automations.
- C. Project managers looking to guide project teams through automations.
- D. Business analysts looking to document the processes for automation.

Answer: A

Explanation:

UiPath StudioX is specifically designed for business users who do not have programming expertise but want to automate repetitive tasks.

Why is B Correct?

StudioX is ideal for:

- * Business users with minimal coding experience.
- * Citizen developers who need simple, no-code automation.
- * Automating personal and team tasks (e.g., data entry, email automation, report generation).

NEW QUESTION # 190

The following table is stored in a variable called "dt".

	A	B	C
1	No.	Item	Quantity
2		1 apple	10
3		2 orange	20
4		3 mango	5
5		4 kiwi	80
6		5 pear	1

What will the value of the qty variable be after executing the Assign activity?

- A. 0
- **B. 1**
- C. 2
- D. null

Answer: B

Explanation:

Explanation

The Assign activity is used to assign a value to a variable. In this case, the variable is "qty". The value of the variable will be 80 after executing the Assign activity because the expression in the Assign activity is "dt.AsEnumerable().Where(Function(x) x("Item").ToString.Equals("mango")).Select(Function(y) y("Quantity")).ToString". This expression is filtering the data table "dt" for rows where the "Item" column is equal to "mango" and then selecting the "Quantity" column from those rows. Since there is only one row in the data table where "Item" is equal to "mango", the value of the "Quantity" column in that row is 80.
