Features of TestPDF Ping Identity PAP-001 Web-Based Practice Questions

Our PAP-001 practice questions are undetected treasure for you if this is your first time choosing them. These advantages help you get a thorough look in details. First of all, the price of our PAP-001 exam braindumps is reasonable and affordable, no matter the office staffs or the students can afford to buy them. Secondly, the quality of our PAP-001 Study Guide is high. You can just look the pass rate of our PAP-001 training quiz, it is high as 98% to 100%.

Ping Identity Certified Professional - PingAccess Sample Questions (Q44-Q49):

NEW QUESTION # 44

A business requires logs to be written to a centralized Oracle database. Which two actions must the PingAccess administrator take to enable this? (Choose 2 answers.)

- A. Remove the logs located in PA_HOME/log.
- B. Copy the database driver JAR file to the PA_HOME/lib directory.
- C. Enable the Audit flag in the Resource.
- D. Import the database certificate into the Trusted Certificate Group.
- E. Configure log4j2.xml and log4j2.db.properties.

Answer: B,E

Explanation:

PingAccess supports logging directly to a relational database using Log4j database appenders. To enable this:

- * Configure log4j2.xml to use a JDBC Appender.
- * Configure log4j2.db.properties with the database connection information.
- * Provide the appropriate database driver in the PA_HOME/lib directory.

Exact Extract:

"To log to a database, configure log4j2.xml and log4j2.db.properties, and place the JDBC driver JAR file in PA_HOME/lib."

- * Option A is correct - both files must be configured.
- * Option B is incorrect - existing logs do not need removal.
- * Option C is incorrect - enabling audit is unrelated to database logging.
- * Option D is correct - the Oracle JDBC driver must be installed in PA_HOME/lib.
- * Option E is incorrect unless TLS is used to connect to the DB, but it is not required for standard DB logging setup.

NEW QUESTION # 45

Anycompany has several applications that need to load images and fonts from www.anycompany.com. Users are currently getting CORS errors. How should the Cross-Origin Request rule be set to allow secure access?

- A. Allowed Origins value for each of the listed domains
- B. Allowed Origins to www.anycompany.com and enable the Allow Credentials option
- C. Allowed Origins to *.anycompany.com and disable the Allow Credentials option
- D. Allowed Origins to * and enable the Allow Credentials option

Answer: B

Explanation:

To prevent CORS errors, administrators must configure a Cross-Origin Request (CORS) Processing Rule.

The secure practice is to allow the specific trusted domain (www.anycompany.com) and, when cookies or credentials are required, to enable Allow Credentials.

Exact Extract:

"For secure CORS, specify exact origins rather than wildcards. Enable 'Allow Credentials' when client-side resources must include cookies or authentication data."

- * Option A is incomplete - multiple values are possible, but in this case only www.anycompany.com is required.
- * Option B is less secure - using a wildcard (*.anycompany.com) broadens exposure unnecessarily.
- * Option C is insecure - * with credentials is disallowed by CORS specifications.
- * Option D is correct - restricts access to the trusted domain and allows credentialed requests.

Reference: PingAccess Administration Guide - Cross-Origin Request Rule

NEW QUESTION # 46

How many administrators are supported using HTTP Basic Authentication in the Administrative Console?

- A. 0
- B. 1
- C. 2
- D. 3

Answer: A

Explanation:

When using HTTP Basic Authentication (admin.auth=native), PingAccess only supports a single administrative account (the default admin user). For multiple administrators, SSO integration (e.g., OIDC) is required.

Exact Extract:

"When admin authentication is set to native (HTTP Basic), only one administrative user is supported. For multiple admins, configure UI authentication with an OIDC provider."

* Option A (1000) is incorrect.

* Option B (1) is correct - only one basic auth admin account.

* Option C (10) and Option D (100) are incorrect.

Reference: PingAccess Administration Guide - Admin Authentication

NEW QUESTION # 47

Which two options can be changed in the run.properties file? (Choose 2 answers.)

- A. Default logs location
- B. X-Frame-Options header
- C. Operational mode for PingAccess
- D. URL for heartbeat endpoint
- E. Logging levels

Answer: C,E

Explanation:

The run.properties file in PingAccess is the primary configuration file that defines system-level runtime behavior. According to PingAccess documentation:

* Exact Extract:

"The run.properties file contains configuration properties for PingAccess, including operational mode, logging levels, admin authentication fallback, cluster settings, and system defaults." (PingAccess Administrator's Guide - run.properties Reference) From this, we can determine:

* C. Operational mode for PingAccess#CorrectThe property pa.operational.mode in run.properties defines whether the node operates as STANDALONE, CLUSTERED_CONSOLE, CLUSTERED_CONSOLE_REPLICA, or CLUSTERED_ENGINE. This is one of the core configurable options.

* E. Logging levels#CorrectProperties such as log.level and other logging configurations are explicitly defined in run.properties, allowing administrators to adjust the verbosity of logs (DEBUG, INFO, WARN, ERROR).

Why the others are incorrect:

* A. Default logs location#IncorrectThe log file path is not controlled via run.properties. It is defined in log4j2.xml, not in run.properties.

* B. URL for heartbeat endpoint#IncorrectThe heartbeat endpoint (/pa/heartbeat.ping) is a fixed system endpoint and is not configurable in run.properties.

* D. X-Frame-Options header#IncorrectSecurity headers like X-Frame-Options are managed under application security policies or global response headers, not in run.properties.

Reference: PingAccess Administrator's Guide - run.properties Reference (section describing pa.operational.mode and logging configuration properties).

NEW QUESTION # 48

The application team is requesting step-up authentication only for a few specific resources while maintaining previous authentication for other resources. What change would the administrator need to make?

- A. Change the Context Root
- B. Use context root as reserved resource base path
- C. Manual Resource Ordering
- D. Authentication Challenge Policy

Answer: D

Explanation:

To enforce step-up authentication for selected resources, PingAccess uses Authentication Challenge Policies. These policies allow different challenge methods to be applied depending on the resource.

Exact Extract:

"Authentication challenge policies define how PingAccess challenges users for authentication and are often applied when step-up authentication is required for specific resources."

* Option A (Authentication Challenge Policy) is correct - it ensures only certain resources trigger step-up MFA.

* Option B is incorrect; the reserved resource base path is unrelated to authentication.

* Option C is incorrect; changing the context root just changes the URL path prefix.

* Option D is incorrect; manual ordering of resources is unrelated to enforcing MFA.
