- Network Services
- Information Security Management System (ISMS)
- Authorization and Authentication
- Security Device Management (SDM)

CheckPoint Check Point Certified Security Administrator R81 Sample Questions (Q335-Q340):

NEW QUESTION # 335

Which of the following is TRUE regarding Gaia command line?

- A. Configuration changes should be done in expert-mode and CLISH is used for monitoring
- B. Configuration changes should be done in `mgmt_di` and use CLISH for monitoring. Expert mode is used only for OS level tasks
- C. Configuration changes should be done in `mgmt_cli` and use expert-mode for OS-level tasks.
- D. All configuration changes should be made in CLISH and expert-mode should be used for OS-level tasks.

Answer: D

Explanation:

Explanation:

The statement that is true regarding Gaia command line is that all configuration changes should be made in CLISH and expert-mode should be used for OS-level tasks. CLISH is the default shell of Gaia CLI that provides a limited set of commands for basic configuration and troubleshooting. Expert mode is an advanced shell that allows running Linux commands and accessing the file system. Configuration changes should not be done in expert-mode, as they may cause inconsistencies or errors in the system. The other statements are false regarding Gaia command line.

NEW QUESTION # 336

What are the three deployment considerations for a secure network?

- A. Standalone, Distributed, and Bridge Mode
- B. Distributed, Bridge Mode, and Remote
- C. Bridge Mode, Remote, and Standalone
- D. Remote, Standalone, and Distributed

Answer: D

Explanation:

The three deployment considerations for a secure network are Remote, Standalone, and Distributed³. Remote deployment means that the Security Management Server and Security Gateway are installed on different machines. Standalone deployment means that the Security Management Server and Security Gateway are installed on the same machine. Distributed deployment means that there are multiple Security Gateways managed by one or more Security Management Servers³. Therefore, the correct answer is C. Remote, Standalone, and Distributed.

NEW QUESTION # 337

You have successfully backed up your Check Point configurations without the OS information. What command would you use to restore this backup?

- A. migrate import
- B. import backup
- C. cp_merge
- D. restore_backup

Answer: D

NEW QUESTION # 338

Identity Awareness allows easy configuration for network access and auditing based on what three items?

- A. Log server IP address.
- B. Client machine IP address.
- C. Network location, the identity of a user and the identity of a machine.
- D. Gateway proxy IP address.

Answer: C

Explanation:

Explanation

Identity Awareness is a blade that enables administrators to define access rules based on the identity of users and machines, rather than just IP addresses. Identity Awareness allows easy configuration for network access and auditing based on three items: network location, the identity of a user, and the identity of a machine.

Network location refers to the source or destination network segment of the traffic. The identity of a user refers to the username or group membership of the user who initiates or receives the traffic. The identity of a machine refers to the hostname or certificate of the machine that initiates or receives the traffic. References:

[Check Point R81 Identity Awareness Administration Guide]

NEW QUESTION # 339

Which Check Point supported authentication scheme typically requires a user to possess a token?

- A. SecurID
- B. RADIUS
- C. Check Point password
- D. TACACS

Answer: A

Explanation:

SecurID is a Check Point supported authentication scheme that typically requires a user to possess a token. A token is a physical device that generates a one-time password that changes periodically. The user must enter the password along with their username to authenticate. References: Remote Access VPN R81.20 Administration Guide, page 30.
