Why Choose TestBraindump for Google Chrome-Enterprise-Administrator Exam Questions Preparation?

You should make progress to get what you want and move fast if you are a man with ambition. At the same time you will find that a wonderful aid will shorten your time greatly. To get the Chrome-Enterprise-Administrator certification is considered as the most direct-viewing way to make big change in your professional profile, and we are the exact Chrome-Enterprise-Administrator Exam Braindumps vendor. If you have a try on our free demos of our Chrome-Enterprise-Administrator study guide, you will choose us!

Google Chrome-Enterprise-Administrator Exam Syllabus Topics:

Topic	Details
Topic 1	• Chrome Enterprise Management Fundamentals: This section of the exam measures skills of a Chrome Device Administrator and covers the foundational elements of managing Chrome in an enterprise. It includes understanding how policies are applied and resolved, differentiating managed browsers from profiles, and describing how policies work. It also covers Chrome's built-in security features, how extensions are used and deployed, and how the release cycle and channels are managed.

Topic 2	• Chrome Extensions: This section of the exam measures skills of an Endpoint Security Manager and involves managing Chrome extension policies. It includes designing extension management strategies, handling extension exemptions, creating approval workflows, and assessing extensions for their risk and compliance with business continuity requirements.
Topic 3	• Manage Chrome Enterprise in the Cloud: This section of the exam measures skills of a Cloud Systems Administrator and focuses on preparing and configuring environments for Chrome cloud management. Candidates must demonstrate how to verify domains, use admin roles, configure organizational structures, deploy enrollment tokens, enable reporting, and maintain Chrome using the Google Admin console.
Topic 4	• Analyze Chrome Data: This section of the exam measures skills of a Chrome Data Analyst and focuses on using the Google Admin console to view, analyze, and troubleshoot browser data. It includes reviewing reports, diagnosing browser or update issues, investigating performance problems, and identifying security risks based on log events and Chrome activity.
Topic 5	• Chrome Updates: This section of the exam measures skills of a Chrome IT Policy Analyst and addresses the various update methods available for Chrome. It includes selecting the right update strategy for different business and security needs, managing compliance across platforms, and adapting update methods based on environmental changes or risks.

Google Professional Chrome Enterprise Administrator Certification Exam Sample Questions (Q39-Q44):

NEW QUESTION # 39
An organization has a compatibility issue with an internal website after the latest Chrome update The decision is made to revert any updates to the working version and stop Chrome from updating beyond the working version For security, Chrome needs to continue updating older versions to the latest compatible version Which configuration would an administrator set?

- A. Update to extended stable channel
- B. Google Updater policy precedence
- C. Auto update check period
- D. Target version and rollback

Answer: D

Explanation:
To pin Chrome to a specific working version and prevent upgrades beyond it while still allowing updates within that major version for security patches, the "Target version and rollback" policy is the appropriate choice. This allows administrators to specify a target version and potentially roll back if issues arise, while still receiving critical security updates within that targeted version.

NEW QUESTION # 40
The security team has a request to approve two extensions with similar functionality. They only want to approve one extension for use in the environment to avoid redundancy What is an objective measurement that the security team can use to help determine which extension may be safer to use?

- A. 3rd Party Risk Score
- B. Chrome Web Store Ratings
- C. Permission Count
- D. Chrome Manifest Version

Answer: A

Explanation:
A "3rd Party Risk Score" provides an objective assessment of the extension's security and privacy risks, often based on automated analysis of its code, requested permissions, developer reputation, and other factors. This is a more data-driven approach to evaluating safety compared to simply counting permissions (which doesn't account for the sensitivity of each permission), the Manifest version (which indicates features but not necessarily safety), or Chrome Web Store ratings (which are subjective and can be

manipulated).

NEW QUESTION # 41
An IT administrator manages a large organization that uses Chrome browser across multiple platforms including Windows, macOS, and Linux The organization has diverse user needs and varying levels of risk associated with different departments, for which the administrator must determine the most efficient method to manage Chrome updates across the organization Why is it advantageous to manage Chrome update policies using the Google Admin console instead of the Group Policy Management Console (GPMC)?

- A. Group Policy does not support Chrome update policies
- B. Group Policy does not support platforms other than Windows
- C. The Google Admin console is only applicable to devices with ChromeOS, making it more secure
- D. The Google Admin console does not allow administrators to view the browser version of any given managed device as Group Policy does

Answer: B

Explanation:
The key advantage of using the Google Admin console for managing Chrome updates in a multi-platform environment is its ability to apply policies consistently across Windows, macOS, and Linux devices. Group Policy (GPMC) is a Windows-specific tool and cannot natively manage Chrome updates on other operating systems. The Google Admin console provides a centralized and platform-agnostic approach to Chrome management.

NEW QUESTION # 42
An organization is deploying 50 new devices which will be managed by a Mobile Device Management solution Which method should be used to enroll the Chrome browser on those devices into Chrome Enterprise Core?

- A. Generate a single device enrollment token and email it to all users, instructing them to enroll their devices individually
- B. Use Google Admin to generate 50 individual device registration keys and distribute them using mobile device management software
- C. Use Google Admin to generate an enrollment token and distribute it using mobile device management software
- D. Use Google Admin console bulk enrollment feature to generate a set of unique tokens, and thendistribute them via secure file sharing platform

Answer: C

Explanation:
The study guide emphasizes using enrollment tokens generated in the Google Admin console for enrolling browsers. When using an MDM solution, the most efficient and recommended method is to generate a single enrollment token and then deploy it to the devices through the MDM software. This allows for automated and scalable enrollment. Bulk enrollment features in the Admin console are typically for direct enrollment, not through MDM. Individual tokens or keys would be inefficient for a large deployment.

NEW QUESTION # 43
An organization has Chrome set to auto-update The security team runs a compliance report from Chrome Enterprise Core and notices that some rarely used machines are showing an old version of Chrome However, when an engineer logs in to these PCs and checks Chrome directly, the correctupdated version appears What is the most likely reason for this discrepancy?

- A. The machine has a different version of Chrome installed that is not managed via auto update
- B. The display version does not update until Chrome is launched
- C. Network setting is blocking the unattended auto-update check
- D. The auto-update feature is malfunctioning and not updating Chrome until it is launched

Answer: B

Explanation:
The most likely reason for this discrepancy is that the version reported in the Chrome Enterprise Core compliance report might not be updated in real-time until Chrome is actively running and checks in. When an engineer logs in and launches Chrome, it likely completes the update process and reports the correct version.
The auto-update feature generally works in the background, and a completely different unmanaged version (option C) or a persistent

network block (option D) would likely prevent updates even when Chrome is launched. A malfunctioning auto-update (option A) is less likely to resolve itself upon manual launch.

NEW QUESTION # 44
......

Our Google Chrome-Enterprise-Administrator Exam Dumps with the highest quality which consists of all of the key points required for the Google Chrome-Enterprise-Administrator exam can really be considered as the royal road to learning. TestBraindump has already become a famous brand all over the world in this field since we have engaged in compiling the Chrome-Enterprise-Administrator practice materials for more than ten years and have got a fruitful outcome.
