Topic 6, Scenario 6, V4 "Independent Test Team"

You have for a while been trying to hire a second test automation specialist for your test team. However, you did not have any luck in finding a suitable candidate. So now, you have been asked by IT management of XYZ to forward a proposal with alternative solutions for building an automated regression test suite at system test level over a period of 2 years including needed training and eventual handover to the test team.

NEW QUESTION # 209

Your test team has created a custom automation tool that will be used for an upcoming release. Now that the tool has been coded, what should be the next step?

- A. Perform an ROI study
- B. Create the tool support guide
- C. Compare the new tool to open source tools
- **D. Test the tool**

Answer: D

Explanation:

The next step after creating a custom automation tool is to test the tool itself. This is to ensure that the tool is reliable, functional, and compatible with the system under test. Testing the tool involves verifying its features, performance, usability, security, and stability. Testing the tool also helps to identify and fix any defects or issues before using it for the actual testing of the product. ISTQB

NEW QUESTION # 210

What is the primary use for the traceability information regarding the relationship between test results and test conditions during test execution? [2]

- A. The project manager uses this information to determine if the project is on schedule.
- B. The development manager uses this information to determine how many developer resources to allocate to defect repair.
- **C. The Test Manager uses this information to control the test execution effort.**
- D. The tester uses this information to determine which test should be run next.

Answer: C

NEW QUESTION # 211

You are looking to Improve the efficiency of testing. The developers have been claiming that the majority of defect reports they receive are invalid either due to the test environment or because the tester did not follow the right steps. In a standard defect management process where should you look for more information about these invalid defects?

- A. In the ones that are Resolved but not Closed
- B. In the ones that are stuck in the In Progress state
- **C. In the ones that are in the status Rejected or Closed without a fix**
- D. In the ones with the status of Re-Opened

Answer: C

Explanation:

Context Analysis:

The developers claim many defect reports are invalid. Reviewing defects that are rejected or closed without fixes can highlight issues like incorrect environment setup or missed testing steps.

Evaluation of Options:

A. In the ones that are stuck in the In Progress state:

Incorrect. These defects are still being investigated, not confirmed as invalid.

B. In the ones that are Resolved but not Closed:

Incorrect. These defects have been fixed but not yet verified; they are not considered invalid.

C . In the ones that are in the status Rejected or Closed without a fix:
Correct. Rejected defects are marked invalid and are directly related to the problem described.

D . In the ones with the status of Re-Opened:
Incorrect. Re-opened defects indicate recurring or unresolved issues, not invalid reports.

Syllabus Alignment:
ISTQB highlights analyzing defect statuses to improve defect reporting and management processes (TM-2.3.5).

NEW QUESTION # 212

Your team has been assigned to test a new product that is tightly integrated with existing systems. The integrations include data transfers and transformations. You have access to the architectural design documents and the integration specifications and some of your testers are former developers.

Given this information, what is the most appropriate test approach?

- A. Experience-based and black-box
- B. Risk-based and non-functional
- C. Model-based and white-box
- D. Requirements-based and functional

Answer: C

Explanation:

Context Analysis:

The scenario involves tight integration, architectural design, and data transformations, requiring detailed and structured approaches. Access to architectural documents and experienced testers (former developers) aligns with model-based and white-box techniques.

Evaluation of Options:

A . Model-based and white-box:

Correct. Model-based testing leverages design documents, while white-box testing uses internal knowledge for detailed integration testing.

B . Experience-based and black-box:

Incorrect. This is less structured and doesn't utilize available design documentation or tester expertise.

C . Risk-based and non-functional:

Incorrect. Risk-based testing focuses on high-priority areas but doesn't leverage the design documents for integration specifics.

D . Requirements-based and functional:

Incorrect. While functional testing is relevant, requirements-based testing does not utilize internal system knowledge effectively.

Syllabus Alignment:

ISTQB emphasizes model-based and white-box testing as appropriate for systems with complex integrations (TM-1.2.6).
