

Study AZ-204 Group, AZ-204 Test Passing Score

P.S. Free 2025 Microsoft AZ-204 dumps are available on Google Drive shared by ActualTestsIT: <https://drive.google.com/open?id=1aGtPGIIM5SY2DlhRKQHoxqiwyKw1dtX>

As a market leader, our company is able to attract quality staffs on our AZ-204 exam materials , it actively seeks out those who are energetic, persistent, and professional to various AZ-204 certificate and good communicator. And we believe that the key of our company's success is its people, skills, and experience on AZ-204 Study Guide. Over 50% of the account executives and directors have been with the Group for more than ten years. We have strong strenght to lead you to success!

There is no doubt that it is very difficult for most people to pass the exam and have the certification easily. If you are also weighted with the trouble about a AZ-204 certification, we are willing to soothe your trouble and comfort you. We have compiled the AZ-204 test guide for these candidates who are trouble in this exam, in order help they pass it easily, and we deeply believe that our AZ-204 Exam Questions can help you solve your problem. Believe it or not, if you buy our study materials and take it seriously consideration, we can promise that you will easily get the certification that you have always dreamed of. We believe that you will never regret to buy and practice our AZ-204 latest question.

Free PDF Microsoft Study AZ-204 Group With Interarctive Test Engine & Reliable AZ-204 Test Passing Score

The Microsoft AZ-204 certification exam offers a great opportunity to advance your career. With the Developing Solutions for Microsoft Azure certification exam beginners and experienced professionals can demonstrate their expertise and knowledge. After passing the Developing Solutions for Microsoft Azure (AZ-204) exam you can stand out in a crowded job market. The AZ-204 certification exam shows that you have taken the time and effort to learn the necessary skills and have met the standards in the market.

Microsoft Developing Solutions for Microsoft Azure Sample Questions (Q101-Q106):

NEW QUESTION # 101

You develop and deploy an Azure App Service ---- app. The web app accesses data in an Azure SQL database You must update the web app to store frequently used data m a new Azure Cache for Redis Premium instance.

You need to implement the Azure Cache for Redis features.

Which feature should you implement? To answer, drag the appropriate feature to the correct requirements Each feature may be used once, more than once, or not at all You may need to ----- between panes or scroll to view content.

NOTE Each correct selection is worth one point

Answer:

Explanation:

Explanation

Graphical user interface, text, application Description automatically generated

NEW QUESTION # 102

SIMULATION

You are developing a web application by using the Azure SDK. The web application accesses data m a zone-redundant BlockBlobStorage storage account The application must determine whether the data has changed since the application last read the data. Update operations must use the latest data changes when writing data to the storages.....

You need to implement the update operations.

Which values should you use? To answer, select the appropriate option m the answer area.

NOTE Each correct selection is worth one point.

Answer:

Explanation:

See the Explanation below

Explanation:

See the answer in below image.

NEW QUESTION # 103

You need to implement the bindings for the CheckUserContent function.

How should you complete the code segment? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

```

public static class CheckUserContent
{
    [FunctionName ("CheckUserContent")]
    public static void Run (
        string content,

        [QueueTrigger("userContent")]
        [BlobTrigger("userContent/{name}")]
        [CosmosDBTrigger("content", "userContent")]
        [Table("content", "userContent", "{name}")]

        Stream output)
    {
        ...
    }
}

```

Answer:

Explanation:

```

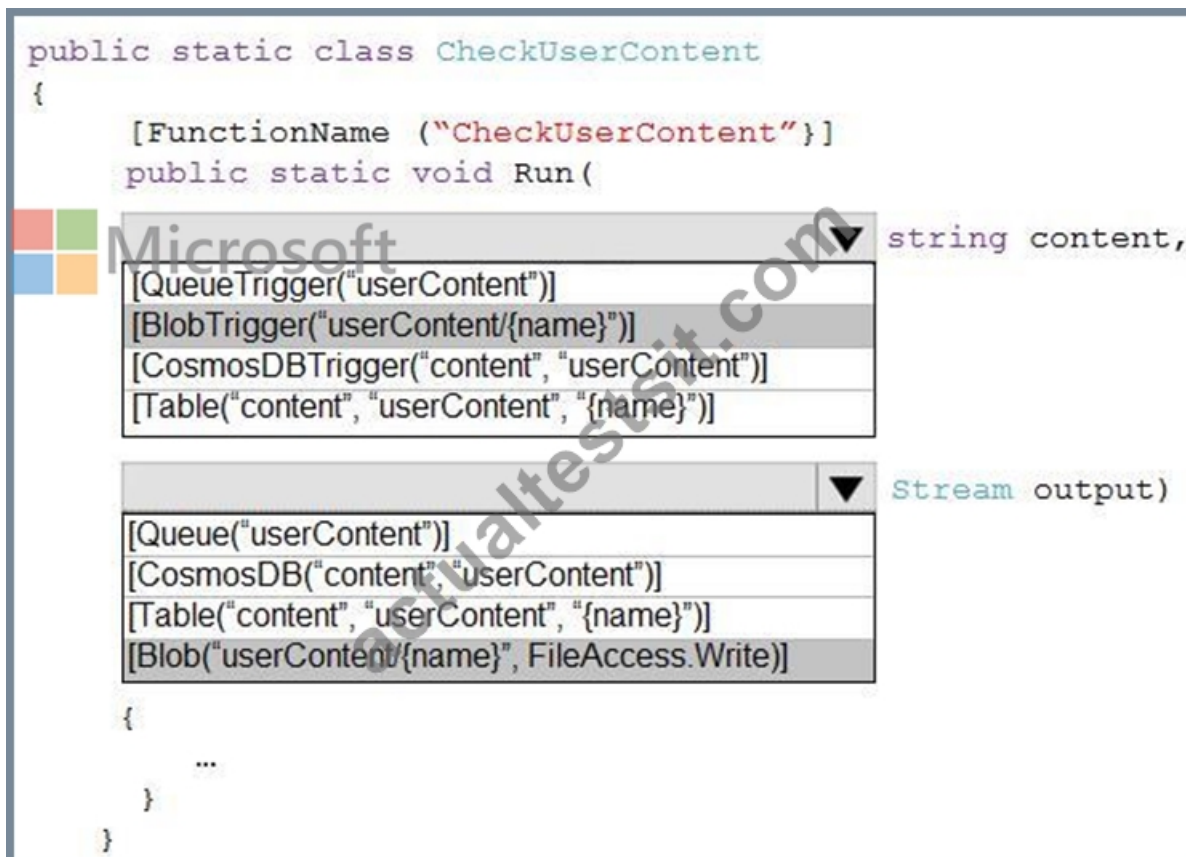

public static class CheckUserContent
{
    [FunctionName ("CheckUserContent")]
    public static void Run (
        string content

        [QueueTrigger("userContent")]
        [BlobTrigger("userContent/{name}")]
        [CosmosDBTrigger("content", "userContent")]
        [Table("content", "userContent", "{name}")]

        Stream output)
    {
        ...
    }
}

```

Explanation

Box 1: [BlobTrigger(..)]

Box 2: [Blob(..)]

Azure Blob storage output binding for Azure Functions. The output binding allows you to modify and delete blob storage data in an Azure Function.

The attribute's constructor takes the path to the blob and a FileAccess parameter indicating read or write, as shown in the following example:

```
[FunctionName("ResizeImage")]
public static void Run(
[BlobTrigger("sample-images/{name}")] Stream image,
[Blob("sample-images-md/{name}", FileAccess.Write)] Stream imageSmall)
{
}
```

Scenario: You must create an Azure Function named CheckUserContent to perform the content checks.

The company's data science group built ContentAnalysisService which accepts user generated content as a string and returns a probable value for inappropriate content. Any values over a specific threshold must be reviewed by an employee of Contoso, Ltd.

Reference:
<https://docs.microsoft.com/en-us/azure/azure-functions/functions-bindings-storage-blob-output>

NEW QUESTION # 104

You need to ensure receipt processing occurs correctly.
 What should you do?

- A. Use blob properties to prevent concurrency problems
- B. Use blob metadata to prevent concurrency problems
- C. Use blob leases to prevent concurrency problems
- D. Use blob SnapshotTime to prevent concurrency problems

Answer: C

Explanation:

Explanation

You can create a snapshot of a blob. A snapshot is a read-only version of a blob that's taken at a point in time.

Once a snapshot has been created, it can be read, copied, or deleted, but not modified. Snapshots provide a way to back up a blob

as it appears at a moment in time.

Scenario: Processing is performed by an Azure Function that uses version 2 of the Azure Function runtime.

Once processing is completed, results are stored in Azure Blob Storage and an Azure SQL database. Then, an email summary is sent to the user with a link to the processing report. The link to the report must remain valid if the email is forwarded to another user.

Reference:

<https://docs.microsoft.com/en-us/rest/api/storageservices/creating-a-snapshot-of-a-blob>

NEW QUESTION # 105

You are implementing an order processing system. A point of sale application publishes orders to topics in an Azure Service Bus queue. The label property for the topic includes the following data:

Property	Description
ShipLocation	the country/region where the order will be shipped
CorrelationId	a priority value for the order
Quantity	a user-defined field that stores the quantity of items in an order
AuditedAt	a user-defined field that records the date an order is audited

The system has the following requirements for subscriptions

Subscription type	Comments
FutureOrders	This subscription is reserved for future use and must not receive any orders.
HighPriorityOrders	Handle all high priority orders and International orders.
InternationalOrders	Handle orders where the country/region is not United States.
HighQuantityOrders	Handle only orders with quantities greater than 100 units.
AllOrders	This subscription is used for auditing purposes. This subscription must receive every single order. AllOrders has an Action defined that updates the AuditedAt property to include the date and time it was received by the subscription.

You need to implement filtering and maximize throughput while evaluating filters.

Which filter types should you implement? To answer, drag the appropriate filter types to the correct subscriptions. Each filter type may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.

Filter types	Answer Area	
	Subscription	Filter type
SQLFilter	FutureOrders	<input type="text"/>
CorrelationFilter	HighPriorityOrders	<input type="text"/>
No Filter	InternationalOrders	<input type="text"/>
	HighQuantityOrders	<input type="text"/>
	AllOrders	<input type="text"/>

Answer:

Explanation:

Filter types

SQLFilter
CorrelationFilter
No Filter

Answer Area

Subscription

FutureOrders

HighPriorityOrders

InternationalOrders

HighQuantityOrders

AllOrders

Filter type

SQLFilter
CorrelationFilter
SQLFilter
SQLFilter
No Filter

Explanation

Subscription	Filter type
FutureOrders	SQLFilter
HighPriorityOrders	CorrelationFilter
InternationalOrders	SQLFilter
HighQuantityOrders	SQLFilter
AllOrders	No Filter

FutureOrders: SQLFilter

HighPriorityOrders: CorrelationFilter

CorrelationID only

InternationalOrders: SQLFilter

Country NOT USA requires an SQL Filter

HighQuantityOrders: SQLFilter

Need to use relational operators so an SQL Filter is needed.

AllOrders: No Filter

SQL Filter: SQL Filters - A SqlFilter holds a SQL-like conditional expression that is evaluated in the broker against the arriving messages' user-defined properties and system properties. All system properties must be prefixed with sys. in the conditional expression. The SQL-language subset for filter conditions tests for the existence of properties (EXISTS), as well as for null-values (IS NULL), logical NOT/AND/OR, relational operators, simple numeric arithmetic, and simple text pattern matching with LIKE. Correlation Filters - A CorrelationFilter holds a set of conditions that are matched against one or more of an arriving message's user and system properties. A common use is to match against the CorrelationId property, but the application can also choose to match against ContentType, Label, MessageId, ReplyTo, ReplyToSessionId, SessionId, To, and any user-defined properties. A match exists when an arriving message's value for a property is equal to the value specified in the correlation filter. For string expressions, the comparison is case-sensitive. When specifying multiple match properties, the filter combines them as a logical AND condition, meaning for the filter to match, all conditions must match.

Boolean filters - The TrueFilter and FalseFilter either cause all arriving messages (true) or none of the arriving messages (false) to be selected for the subscription.
