Answer:

Required secrets:

- Certificate
- Personal access token
- Shared Access Authorization token
- Username and password

Storage location:

- Azure Data Lake
- Azure Key Vault
- Azure Storage with HTTP access
- Azure Storage with HTTPS access

Explanation:

Every request made against a storage service must be authorized, unless the request is for a blob or container resource that has been made available for public or signed access. One option for authorizing a request is by using Shared Key.

Scenario: The mobile applications must be able to call the share pricing service of the existing retirement fund management system. Until the system is upgraded, the service will only support basic authentication over HTTPS.

The investment planning applications suite will include one multi-tier web application and two iOS mobile application. One mobile application will be used by employees; the other will be used by customers.

- D. SID values are generated when InfoObject ADDRESS is activated.

Answer: A

NEW QUESTION # 37

What are some of the prerequisites for using SAP S/4HANA ABAP CDS views for extraction into SAP BW/4HANA in an ODP context? Note: There are 2 correct answers to this question.

- A. The ABAP CDS views must be defined with the appropriate data extraction annotations.
- B. The ABAP CDS views must be released through the program RODPS_OS_EXPOSE for BW extraction.
- C. An ODP source system with context ODP_CDS must be created in SAP BW/4HANA.
- D. The Operational Data Provisioning Framework must be configured in SAP BW/4HANA.

Answer: B,C

Explanation:

Extracting data from SAP S/4HANA ABAP CDS (Core Data Services) views into SAP BW/4HANA using the Operational Data Provisioning (ODP) framework requires specific prerequisites. These ensure that the CDS views are properly exposed and accessible for extraction. Below is a detailed explanation of why the verified answers are correct.

* ABAP CDS Views: ABAP CDS views are reusable data models defined in SAP S/4HANA. They provide a semantic layer for querying data and can be used for reporting and analytics.

* Operational Data Provisioning (ODP): ODP is a framework in SAP BW/4HANA that enables real-time or near-real-time data extraction from various source systems, including SAP S/4HANA.

* ODP Contexts: ODP contexts define the type of source system and data extraction method. For CDS views, the context ODP_CDS is used.

* Data Extraction Annotations: Annotations in CDS views specify metadata for extraction purposes, such as field properties and extraction behavior.

Key Concepts:

* Option A: The ABAP CDS views must be released through the program RODPS_OS_EXPOSE for BW extraction.

* Why Correct? To make an ABAP CDS view available for extraction via ODP, it must be explicitly released using the program RODPS_OS_EXPOSE. This step registers the view in the ODP framework and makes it accessible to SAP BW/4HANA.

* Option B: The Operational Data Provisioning Framework must be configured in SAP BW/4HANA.

* Why Incorrect? While configuring the ODP framework is a general prerequisite for any ODP-based extraction, it is not specific to extracting ABAP CDS views. This option is too broad to be considered a direct prerequisite.

* Option C: An ODP source system with context ODP_CDS must be created in SAP BW/4HANA.

* Why Correct? To extract data from ABAP CDS views, you must create an ODP source system in SAP BW/4HANA with the context ODP_CDS. This context specifies that the source system provides data from CDS views.

* Option D: The ABAP CDS views must be defined with the appropriate data extraction annotations.

* Why Incorrect? While annotations are important for defining metadata in CDS views, they are not mandatory for ODP-based extraction. The primary requirement is releasing the view using RODPS_OS_EXPOSE.

Verified Answer Explanation:

* SAP BW/4HANA Extraction Guide: The guide outlines the steps for extracting data from ABAP CDS views using the ODP framework, including the use of RODPS_OS_EXPOSE and the creation of an ODP source system.

* SAP Note 2700850: This note provides detailed instructions on releasing CDS views for BW extraction and configuring the ODP framework.

* SAP Best Practices for ODP Extraction: SAP recommends using the ODP_CDS context for extracting data from ABAP CDS views and emphasizes the importance of releasing views using RODPS_OS_EXPOSE.
