OCPE Pesticide Applicator Category 7A General and Household Pest Control Exam Sample Questions (Q23-Q28):

NEW QUESTION # 23

___ pressure is suggested for indoor use with a handheld sprayer.

- A. A power sprayer and high
- **B. Low**
- C. High

Answer: B

Explanation:

For indoor applications with a handheld sprayer, low pressure is recommended to minimize overspray and reduce the risk of pesticide drift onto non-target areas, such as furniture or food surfaces. The General Pest Management: Guide for Commercial Applicators - Category 7A(Chapter 5: Pesticide Application) advises using low-pressure settings (typically under 50 psi) for indoor crack-and-crevice or spot treatments. Option A (high pressure) and Option B (power sprayer and high) are more suited for outdoor or large-scale applications, not indoor household pest control.

NEW QUESTION # 24

Bait stations confine toxic substances to removable units. Their successful use depends on their:

- A. Application as a dab of material
- B. Harborage
- **C. Placement**

Answer: C

Explanation:

Bait stations are effective for controlling pests like roaches or rodents when placed in areas where pests are active, such as near food sources or nesting sites. The General Pest Management: Guide for Commercial Applicators - Category 7A(Chapter 5: Pesticide Application) emphasizes that placement is critical for success, as improper placement reduces pest contact with the bait. Option A (harborage) refers to pest hiding spots, not bait station use. Option B (application as a dab) applies to gel baits, not bait stations.

NEW QUESTION # 25

A carcinogen is a material that causes:

- **A. Cancer**
- B. Birth defects
- C. Teratogen

Answer: A

Explanation:

A carcinogen is a substance that can cause cancer, as defined in the General Pest Management: Guide for Commercial Applicators - Category 7A(Chapter 3: Pesticide Safety). Some pesticides are classified as carcinogens due to their potential to cause cancer with long-term exposure. Option B (birth defects) is associated with teratogens, not carcinogens. Option C (teratogen) is incorrect because a teratogen is a substance that causes birth defects, not cancer, and the term itself is not the definition.

NEW QUESTION # 26

Written notification for single-family residences must include the:

- A. Name of the pesticide used
- B. Full pesticide label directions
- C. Exact date of application

Answer: C

Explanation:

For single-family residences, NJDEP regulations (N.J.A.C. 7:30-9.13) require written notification to include the exact date of application to inform residents of when the treatment will occur. Option B (full pesticide label directions) is not required in the notification, though the label must be followed.

Option C (name of the pesticide) is typically included in post-application notices but is not mandatory in the pre-application written notification.

NEW QUESTION # 27

Cockroaches develop through:

- A. Total metamorphosis (egg, adult)
- B. Gradual metamorphosis (egg, nymph, adult)
- C. Complete metamorphosis (egg, larva, pupa, adult)

Answer: B

Explanation:

Cockroaches undergo gradual metamorphosis, which includes three stages: egg, nymph, and adult.

Nymphs hatch from eggs and resemble smaller, wingless adults, molting several times before reaching maturity. The General Pest Management: Guide for Commercial Applicators - Category 7A (Chapter 7:

Cockroaches) confirms this life cycle for common species like the German cockroach. Option B (complete metamorphosis) applies to insects like flies or beetles. Option C (total metamorphosis) is not a recognized term and is incorrect.

NEW QUESTION # 28

.....

Category-7A-General-and-Household-Pest-Control study dumps always managed to build an excellent relationship with our users through the mutual respect and attention we provide to everyone.
