We provide 24-hour online service for all customers who have purchased CCSK test guide. You can send us an email to ask questions at anytime, anywhere. For any questions you may have during the use of CCSK exam questions, our customer service staff will be patient to help you to solve them. At the same time, if you have problems with downloading and installing, Certificate of Cloud Security Knowledge (v4.0) Exam torrent prep also has dedicated staff that can provide you with remote online guidance. In order to allow you to use our products with confidence, CCSK Test Guide provide you with a 100% pass rate guarantee. Once you unfortunately fail the exam, we will give you a full refund, and our refund process is very simple.

More and more people look forward to getting the CCSK certification by taking an exam. However, the exam is very difficult for a lot of people. Especially if you do not choose the correct study materials and find a suitable way, it will be more difficult for you to pass the exam and get the Cloud Security Alliance related certification. If you want to get the related certification in an efficient method, please choose the CCSK learning dumps from our company. We can guarantee that the study materials from our company will help you pass the exam and get the certification in a relaxed and efficient method.

Cloud Security Alliance CCSK Test Dumps Free & CCSK Study Reference

Our Cloud Security Alliance CCSK training materials are compiled by professional experts. All the necessary points have been mentioned in our Certificate of Cloud Security Knowledge (v4.0) Exam CCSK practice engine particularly. About some tough questions or important points, they left notes under them. Besides, our experts will concern about changes happened in Certificate of Cloud Security Knowledge (v4.0) Exam CCSK study prep all the time.

Cloud Security Alliance Certificate of Cloud Security Knowledge (v4.0) Exam Sample Questions (Q237-Q242):

NEW QUESTION # 237

Which feature in cloud enhances security by isolating deployments similar to deploying in distinct data centers?

- A. Randomized deployment configurations
- B. Shared deployments for similar applications
- C. A single deployment for all applications
- D. Multiple independent deployments for applications

Answer: D

Explanation:

Multiple independent deployments help isolate workloads, reducing the potential impact of a breach by confining it to a single deployment environment. Reference: [Security Guidance v5, Domain 7 - Infrastructure & Networking]

NEW QUESTION # 238

Why is it essential to include key metrics and periodic reassessment in cybersecurity governance?

- A. To ensure effective and continuous improvement of security measures
- B. To document all cybersecurity incidents and monitor them overtime
- C. To reduce the number of security incidents to zero
- D. To meet legal requirements and avoid fines

Answer: A

Explanation:

Including key metrics and periodic reassessment in cybersecurity governance is essential for ensuring the effective and continuous improvement of security measures. Metrics provide a way to assess the current state of security, identify gaps, and measure progress over time. Periodic reassessment allows organizations to adapt to emerging threats and vulnerabilities, ensuring that security controls remain relevant and effective as the threat landscape evolves.

While meeting legal requirements is important, the primary reason for metrics and reassessment is continuous improvement, not just legal compliance. Documenting cybersecurity incidents is important, but the main focus of key metrics and reassessment is improving and adapting security strategies. Zero security incidents is not feasible; the goal is to reduce incidents and manage risk, not to eliminate all incidents entirely.

NEW QUESTION # 239

Which practice ensures container security by preventing post-deployment modifications?

- A. Employing Role-Based Access Control (RBAC) for container access
- B. Use of immutable containers
- C. Regular vulnerability scanning of deployed containers
- D. Implementing dynamic network segmentation policies

Answer: B

Explanation:

Immutable containers are not altered post-deployment, ensuring the integrity of the deployed environment and reducing the risk of unauthorized modifications. Reference: [CCSK v5 Curriculum, Domain 8 - Cloud Workload Security][16†source].

NEW QUESTION # 240

What can be implemented to help with account granularity and limit blast radius with IaaS and PaaS?

- A. Configuring role-based authentication

- B. Implementing least privilege accounts
- C. Maintaining tight control of the primary account holder credentials
- D. Configuring secondary authentication
- E. Establishing multiple accounts

Answer: E

NEW QUESTION # 241

What does Zero Trust Network Access (ZTNA) primarily use to control access to applications?

- A. IP address and port number
- B. Geolocation data exclusively
- C. Username and password
- D. Identity, device, and contextual factors

Answer: D

Explanation:

Zero Trust Network Access (ZTNA) enforces the principle of "never trust, always verify." Unlike traditional perimeter-based security, ZTNA continuously evaluates access requests using dynamic factors. These include:

- * User identity (authenticated via SSO or MFA)
- * Device posture (device compliance, health status)
- * Contextual information (time of access, location, behavior patterns)

This layered decision-making process ensures that access is tightly controlled and highly contextual, minimizing attack surfaces and mitigating lateral movement within networks.

ZTNA aligns with cloud-native security practices discussed in Domain 7: Infrastructure Security, emphasizing the transition from static access control lists to dynamic, identity-centric enforcement models.
