Test JN0-336 Study Guide, JN0-336 Training Courses

ITPassLeader Juniper JN0-336 practice test software is the answer if you want to score higher in the Juniper JN0-336 exam and achieve your academic goals. Don't let the Security, Specialist (JNCIS-SEC) (JN0-336) certification exam stress you out! Prepare with our Security, Specialist (JNCIS-SEC) (JN0-336) exam dumps and boost your confidence in the Security, Specialist (JNCIS-SEC) (JN0-336) exam. We guarantee your road toward success by helping you prepare for the Security, Specialist (JNCIS-SEC) (JN0-336) certification exam. Use the best ITPassLeader Juniper JN0-336 practice questions to pass your Security, Specialist (JNCIS-SEC) (JN0-336) exam with flying colors!

Juniper Security, Specialist (JNCIS-SEC) Sample Questions (Q20-Q25):

NEW QUESTION # 20

A client has attempted communication with a known command-and-control server and it has reached the configured threat level threshold.

Which feed will the client's IP address be automatically added to in this situation?

- **A. the infected host cloud feed**
- B. the allowlist and blocklist feed
- C. the command-and-control cloud feed
- D. the custom cloud feed

Answer: A

Explanation:

Infected hosts are internal hosts that have been compromised by malware and are communicating with external C&C servers³. Juniper ATP Cloud provides infected host feeds that list internal IP addresses or subnets of infected hosts along with a threat level³. Once the Juniper ATP Cloud global threshold for an infected host is met, that host is added to the infected host feed and assigned a threat level of 10 by the cloud⁴. You can also configure your SRX Series device to block traffic from these IP addresses using security policies⁴.

NEW QUESTION # 21

Which statement about security policy schedulers is correct?

- A. A policy can have multiple schedulers.
- B. A policy without a defined scheduler will not become active
- C. When the scheduler is disabled, the policy will still be available.
- **D. Multiple policies can use the same scheduler.**

Answer: D

Explanation:

Schedulers can be defined and reused by multiple policies, allowing for more efficient management of policy activation and deactivation. This can be particularly useful for policies that need to be activated during specific time periods, such as business hours or maintenance windows.

NEW QUESTION # 22

You are deploying a new SRX Series device and you need to log denied traffic.

In this scenario, which two policy parameters are required to accomplish this task? (Choose two.)

- **A. deny**
- B. count
- **C. session-close**
- D. session-init

Answer: A,C

NEW QUESTION # 23

You are asked to determine how much traffic a popular gaming application is generating on your network.

Which action will you perform to accomplish this task?

- A. Enable AppQoS on the proper security zones
- B. Enable screen options on the proper security zones
- **C. Enable AppTrack on the proper security zones.**
- D. Enable APBR on the proper security zones

Answer: C

Explanation:

AppTrack is a feature of Juniper Networks firewall solutions that allows administrators to track applications, users, and the amount

of traffic generated by those applications on the network. AppTrack can be enabled on specific security zones of the network to monitor traffic on those zones. This feature can be used to determine how much traffic a popular gaming application is generating on the network.

For more information, please refer to the Juniper Networks JNCIS-SEC Study Guide.

NEW QUESTION # 24

Exhibit

```
[edit security policies from-zone trust to-zone untrust]
user@host# show
policy permit-http {
  match {
    source-address 172.25.11.0/24;
    destination-address any;
    application http;
  }
  then {
    permit;
  }
}
[edit security policies from-zone trust to-zone untrust]
user@host# commit
[edit security policies from-zone trust to-zone untrust policy permit-http match
application]
'http'
application or application-set must be defined
error: commit failed: (statements constraint check failed)
```

You are trying to create a security policy on your SRX Series device that permits HTTP traffic from your private 172.25.11.0/24 subnet to the Internet. You create a policy named permit-http between the trust and untrust zones that permits HTTP traffic. When you issue a commit command to apply the configuration changes, the commit fails with the error shown in the exhibit.

Which two actions would correct the error? (Choose two.)

- A. Create a custom application named http at the [edit applications] hierarchy.
- B. Execute the Junos commit full command to override the error and apply the configuration.
- C. Modify the security policy to use the built-in Junos-http applications.
- D. Issue the rollback 1 command from the top of the configuration hierarchy and attempt the commit again.

Answer: A,C

Explanation:

The error message indicates that the Junos-http application is not defined, so you need to either create a custom application or modify the security policy to use the built-in Junos-http application. Doing either of these will allow you to successfully commit the configuration.

NEW QUESTION # 25

.....

The Juniper expert team use their knowledge and experience to make out the latest short-term effective training materials. This training materials is helpful to the candidates. It allows you to achieve the desired results in the short term. Especially those who study JN0-336 while working, you can save a lot of time easily. ITPassLeader's training materials are the thing which you most wanted.
