CTA EXAM - MARCH 24TH REVIEW

FOUR TYPES OF LOCAL GOV'T UNITS - AKA CREATURES OF THE STATE - correct answer County, Municipality, School District, Special District

SIX CLASSIFICATIONS OF COUNTIES - correct answer First - population over 550k and density of more than 3000 persons per sq/mi - ANY PART OF STATE (Essex, Bergen, Hudson)

Second - >200k pop - NOT BORDERING ATLANTIC (Burlington, Camden, Gloucester, Mercer, Middlesex, Morris, Passaic, Somerset, Union)

Third - 50k-200k pop - NOT BORDERING ATLANTIC (Cumberland, Hunterdon, Salem, Sussex, Warren)

Fourth - <50k pop - NOT BORDERING ATLANTIC (None)

Fifth - >125k pop - BORDERING ATLANTIC (Atlantic, Monmouth, Ocean)

Sixth - 125k or < pop - BORDERING ATLANTIC (Cape May)

APPORTIONMENT OF COUNTY COST - correct answer Based on the equalized value of real property and certain locally assessed personal property in each municipality.

CLASSIFICATION OF MUNICIPALITIES - correct answer 1) Type of municipality

2) Form of Government

FIVE TYPES OF MUNICIPALITIES - correct answer Borough

Township

Village

Town

City

METHOD OF ASSESSOR SELECTION

Commission Form of Local Govt - correct answer Assessor(s) appointed by the commission at org meeting by director of dept at subsequent date

In the matter of quality, our CTA practice engine is unsustainable with reasonable prices. Despite costs are constantly on the rise these years from all lines of industry, our CTA learning materials remain low level. That is because our company beholds customer-oriented tenets that guide our everyday work. The achievements of wealth or prestige is no important than your exciting feedback about efficiency and profession of our CTA Practice Engine. So our CTA practice materials are great materials you should be proud of and we are!

ServiceNow CTA Exam Syllabus Topics:

Topic	Details
Topic 1	Security Architecture: This section measures the abilities of Security Architects in designing and implementing secure IT architectures. It covers principles and practices for protecting IT systems from various threats and vulnerabilities.
Topic 2	Current and To-Be Architecture: This section tests the knowledge of Enterprise Architects in understanding and comparing current IT architectures with future (to-be) architectures. It emphasizes the ability to analyze gaps and develop strategies for transformation.

Topic 3	• Technical Governance: This domain evaluates the expertise of IT Governance Specialists in establishing and enforcing technical policies and standards. It focuses on ensuring that IT operations align with organizational goals and regulatory requirements.
Topic 4	• Testing Leading Practices: This section tests the knowledge of Quality Assurance Engineers in applying best practices for testing IT systems. It covers methodologies and techniques for ensuring that systems meet quality and functionality standards before deployment.
Topic 5	• Data Strategies: This domain evaluates the expertise of Data Analysts in developing effective data management strategies. It focuses on how to align data practices with business objectives and ensure data quality and integrity.
Topic 6	• Go-Live Preparation: This part assesses the skills of Project Coordinators in preparing for the go-live phase of IT projects. It emphasizes strategies for ensuring smooth transitions and minimizing disruptions during system launches.

CTA Latest Exam Pattern | CTA Discount Code

The privacy protection of users is an eternal issue in the internet age. Many illegal websites will sell users' privacy to third parties, resulting in many buyers are reluctant to believe strange websites. But you don't need to worry about it at all when buying our CTA Learning Engine. We assure you that we will never sell users' information on the CTA exam questions because it is damaging our own reputation. And we will help you on the CTA study materials if you have any question.

ServiceNow Certified Technical Architect (CTA) Sample Questions (Q44-Q49):

NEW QUESTION # 44

A system administrator needs to ensure that sensitive customer data in fields is only accessible to specific roles within a ServiceNow instance. Which feature should be utilized?

- A. Full Disk Encryption (FDE)
- B. PI1 Encryption
- **C. Column Level Encryption (CLE)**
- D. Cloud Encryption

Answer: C

Explanation:

To control access to sensitive data at the field level, the system administrator should use Column Level Encryption (CLE).

Here's how CLE works:

Field-Level Encryption: CLE allows you to encrypt specific fields within a table, ensuring that only authorized users with the necessary decryption keys can access the data.

Granular Control: You can define different encryption keys for different fields or groups of fields, providing fine-grained control over data access.

Role-Based Access: You can grant access to decryption keys based on user roles, ensuring that only authorized personnel can view sensitive information.

Why not the other options?

A: PI1 Encryption: This is not a standard ServiceNow encryption feature.

C: Cloud Encryption: This is a broader term for encryption solutions provided by cloud providers, not a specific ServiceNow feature.

D: Full Disk Encryption (FDE): This encrypts the entire hard drive, not individual fields within the application.

NEW QUESTION # 45

What are included in the domains of technical architecture in ServiceNow?

Choose 3 answers

- A. Environment Management
- B. Data Management
- C. App Dev Management
- D. Security Management
- E. Risk Management

Answer: A,B,D

Explanation:

The domains of technical architecture in ServiceNow encompass the key areas that ensure the platform's stability, security, and scalability. These include:

B: Security Management: This domain focuses on securing the ServiceNow instance, including access control, authentication, data encryption, and vulnerability management.

C: Environment Management: This domain deals with the management of the ServiceNow instances, including instance strategy, upgrades, patching, and performance monitoring.

D: Data Management: This domain covers aspects of data governance, data quality, data integration, and data security within the ServiceNow platform.

Why not the other options?

A: Risk Management: While important, risk management is a broader organizational concern that extends beyond technical architecture.

E: App Dev Management: Application development management is a specific area within the broader technical architecture, focusing on the development and deployment of applications on the platform.

NEW QUESTION # 46

What benefits does the Common Service Data Model (CSDM) provide to organizations using ServiceNow products?

- A. Rationalization, outage reduction, and business processes alignment
- B. Customization, consistent analysis, and data governance
- C. Improved security, increased storage capacity, and faster processing speed
- D. Automated deployment, maintenance efficiency, and comprehensive monitoring

Answer: B

Explanation:

The CSDM offers several key benefits, and the best fit among the options is D. Customization, consistent analysis, and data governance. Here's why:

* Customization: CSDM provides a framework, but it allows for customization to fit specific organizational needs. You can extend the data model with new CI classes and attributes while maintaining a consistent structure.

* Consistent Analysis: CSDM enables consistent reporting and analysis across the organization by providing a standardized structure for CMDB data. This makes it easier to gain insights into services, applications, and their supporting infrastructure.

* Data Governance: CSDM promotes data governance by establishing clear definitions, relationships, and ownership for data within the CMDB. This helps ensure data quality and consistency.

Why not the other options?

* A: While CSDM can indirectly contribute to rationalization and business process alignment, these are not its primary benefits. Outage reduction is more related to incident and problem management.

* B: Improved security, storage capacity, and processing speed are not direct benefits of CSDM. These are more related to the underlying ServiceNow platform infrastructure.

* C: Automated deployment and maintenance efficiency are not core benefits of CSDM. While CSDM can support these areas, they are not its main focus.

NEW QUESTION # 47

What are valid methods for bulk data export from ServiceNow?

Choose 3 answers

- A. Utilizing export sets with MID Server scheduling
- B. Extracting data using HTTP-based web services
- C. Using printed reports for data extraction

- D. Using SMS push notifications for data extraction
- E. Using an external ODBC connector to query tables

Answer: A,B,E

Explanation:

ServiceNow provides several methods for exporting bulk data:

A: Using an external ODBC connector to query tables: ODBC (Open Database Connectivity) allows external applications to connect to the ServiceNow database and extract data using SQL queries. This is a powerful method for extracting specific data sets.

D: Utilizing export sets with MID Server scheduling: Export sets define the data to be exported. The MID Server acts as an intermediary between ServiceNow and external systems, enabling scheduled data exports to files or other destinations.

E: Extracting data using HTTP-based web services: ServiceNow provides REST APIs that allow you to programmatically extract data from the platform. This is a flexible method for integrating with other systems and automating data extraction.

Why not the other options?

B: Using SMS push notifications for data extraction: SMS notifications are not suitable for bulk data extraction.

C: Using printed reports for data extraction: Printed reports are not designed for efficient data extraction. They are intended for human-readable output.

NEW QUESTION # 48

What is the primary factor in determining the number of MID Servers required for a standard ServiceNow deployment?

- A. The number of network routers in use
- B. The number of concurrent users on the instance
- C. The number of targets and interaction frequency
- D. The geographical spread of the organization

Answer: C

Explanation:

The primary factor in determining the number of MID Servers needed is the number of targets and interaction frequency.

Targets: The number of devices, applications, or external systems that ServiceNow needs to interact with (e.g., for discovery, orchestration, integrations).

Interaction Frequency: How often ServiceNow needs to communicate with these targets (e.g., continuous monitoring, scheduled data imports).

Why not the other options?

A: The number of network routers in use: While network infrastructure is important, it's not the primary factor for MID Server sizing.

C: The number of concurrent users on the instance: User activity impacts application server load, not directly the number of MID Servers needed.

D: The geographical spread of the organization: Geographic spread can influence MID Server placement, but the primary factor is the number of targets and interaction frequency.

NEW QUESTION # 49
