Our SMI300XS study materials have a professional attitude at the very beginning of its creation. The series of SMI300XS measures we have taken is also to allow you to have the most professional products and the most professional services. I believe that in addition to our SMI300XS Exam Questions, you have also used a variety of products. We believe if you compare our SMI300XS training guide with the others, you will choose ours at once.

A growing number of people start to take the SMI300XS exam in order to gain more intensifying attention in the different field. It is known to us that the knowledge workers have been playing an increasingly important role all over the world, since we have to admit the fact that the SMI300XS certification means a great deal to a lot of the people, especially these who want to change the present situation and get a better opportunity for development. Our SMI300XS Exam Questions will help you make it to pass the SMI300XS exam and get the certification for sure.

## Pass Guaranteed Quiz 2025 Supermicro Valid SMI300XS: Supermicro MI300X GPU Service Specialist (SMI300XS) Exam Exam Format

There is a ton of Supermicro MI300X GPU Service Specialist (SMI300XS) Exam (SMI300XS) prep material available on the internet. But the main thing to notice is their validity and reliability. Many applicants remain unsuccessful in locating the right Supermicro MI300X GPU Service Specialist (SMI300XS) Exam (SMI300XS) practice test and lose their time and money.

## Supermicro MI300X GPU Service Specialist (SMI300XS) Exam Sample Questions (Q40-Q45):

NEW QUESTION # 40
Before reinstalling the motherboard tray, what critical step should be taken to ensure proper installation?

- A. Shake the tray to confirm it fits properly
- B. Align the motherboard tray with the grooves in the chassis
- C. Screw in the motherboard tray at random points before aligning it
- D. Tilt the motherboard tray at an angle before placing it

Answer: B

Explanation:
Why Must the Motherboard Tray Be Aligned With the Grooves?
* The Supermicro MI300X chassis is designed with built-in alignment grooves that help precisely position the motherboard tray.
* If the tray is not aligned properly:
* The PCIe slots and mounting points will not line up correctly.
* The backplane connections may be misaligned, leading to system boot errors.
* Improper installation can block airflow, leading to potential overheating issues.
Step-by-Step Proper Reinstallation Process:
#Step 1:Identify the alignment grooves on the chassis.#Step 2:Slowly slide the motherboard tray into place, ensuring it follows the grooves.#Step 3:Verify that the tray sits flush with the chassis.#Step 4:Secure the tray with screws only after confirming proper alignment.

Why Other Options Are Incorrect?

* B (Shake the tray to confirm fit)# Shaking the tray can loosen connectors and potentially damage components.

* C (Screw in randomly before aligning)# If screws are installed before alignment, it can cause uneven seating and difficulty in securing other components.

* D (Tilt the motherboard tray at an angle)# The tray should be inserted straight into the grooves, not at an angle.

Official Documentation Reference:

* Supermicro AS-8125GS-TNMR2 Installation Guide confirms that the motherboard tray must be aligned with the chassis grooves before securing it.

## NEW QUESTION # 41

Which cable connecting the AOM card to the motherboard is NOT a data cable?

- A. MCIO cables
- B. Power cable
- C. JNCIS1
- D. SAS cable

**Answer: B**

Explanation:

The power cable is the only cable that is not a data cable when connecting an AOM card to the motherboard.

Cable Functionality Breakdown:

* A (Power Cable) # NOT a data cable

* Supplies electrical power to the AOM card.

* Does not transmit data between components.

* B (MCIO Cables) # Data cables

* These cables transmit high-speed NVMe data.

* C (JNCIS1) # Data cable

* This interface is used for management and communication.

* D (SAS Cable) # Data cable

* Used for data storage connections.

Official Documentation Reference:

* Supermicro AOM Expansion Module Guide states that the power cable is the only non-data cable in AOM installations.

## NEW QUESTION # 42

Where is the one screw that needs to be removed in order to remove the AOM bracket?

- A. On top of the hard drive tray
- B. On top of the fan tray
- C. On the rear of the power supply
- D. On the side of the motherboard tray

**Answer: D**

Explanation:

Understanding the AOM Bracket in Supermicro MI300X Systems

The AOM (Add-On Module) bracket is used to hold optional expansion cards, such as:

* RAID controllers

* Additional network interface cards (NICs)

* BMC/IPMI modules for system management

Why is the Screw Located on the Side of the Motherboard Tray?

* The AOM bracket is secured to the chassis via a single screw that is located on the side of the motherboard tray.

* This design keeps the bracket firmly in place while still allowing for easy removal when needed.

* Removing the screw first prevents unnecessary strain on the bracket and ensures safe removal of the AOM card.

Why Other Options Are Incorrect?

* A (On top of the hard drive tray)# The hard drive tray does not secure the AOM bracket.

* B (On top of the fan tray)# Fans do not hold down the AOM bracket.

* D (On the rear of the power supply)# The power supply is not directly connected to the AOM bracket.

Official Documentation Reference:

* Supermicro AS-8125GS-TNMR2 Expansion Module Guidespecifies that theAOM bracket is secured by a single screw located on the side of the motherboard tray.

**NEW QUESTION # 43**

You must remove the motherboard tray from the chassis before you can access the NVMe backplane.
True or False?

- A. False
- B. True

**Answer: B**

Explanation:
InSupermicro MI300X GPU systems, theNVMe backplane is located behind the motherboard tray, meaning the tray must be removed first.
Why is this step necessary?
* The NVMe backplane is physically secured behind the motherboard trayto support high-speed PCIe connectivity.
* Removing the motherboard tray provides clear accessto NVMe connectors and MCIO cables.
* Skipping this step may cause unnecessary strain on cables, leading to potential connector damage.
Official Documentation Reference:
* Supermicro Service Guide for NVMe Systemsconfirms that themotherboard tray must be removed firstbefore working on the NVMe backplane.

**NEW QUESTION # 44**

When installing the NVMe backplane back into the motherboard tray, what cables need to be reconnected?

- A. Only the SATA cable needs to be reconnected
- B. Only the MCIO cables need to be reconnected
- C. Only the power cables need to be reconnected
- D. SATA cable, power cables, MCIO cables, 54-volt power cable

**Answer: D**

Explanation:
When reinstalling theNVMe backplane, several critical cables must be properlyreconnectedto ensure the system functions correctly.
Required Connections:
* SATA Cable# Some NVMe backplanesalso support SATA drives, requiring SATA connectivity.
* Power Cables# The NVMe backplanerequires direct powerto enable SSD operations.
* MCIO Cables# These cables providehigh-speed data connectivitybetween the NVMe drives and the motherboard.
* 54-Volt Power Cable# Thissupplies direct powerto the NVMe backplane foroptimal performance and stability.
Why other options are incorrect?
* B (Only SATA cable)# NVMe backplanes usePCIe-based storage. While SATA connectionsmay exist,they are not the only required cables.
* C (Only MCIO cables)# While MCIO cables are necessary for PCIe-based NVMe drives,power cables must also be reconnectedfor the system to function.
* D (Only power cables)#Data communication would failwithout MCIO connections, rendering the systemunable to detect NVMe drives.
Official Documentation Reference:
* Supermicro NVMe Service GuideandAS-8125GS-TNMR2 Installation Manualemphasize the correct reinstallation of power and data cablesto avoidhardware malfunctions.
