Oracle 1Z0-770 Latest Dumps Pdf & Reliable 1Z0-770 Exam Practice

The customers can immediately start using the Oracle APEX Developer Professional (1Z0-770) exam dumps of Actual4test after buying it. In this way, one can save time and instantly embark on the journey of 1Z0-770 test preparation. 24/7 customer service is also available at Actual4test. Feel free to reach our customer support team if you have any questions about our 1Z0-770 Exam Preparation material.

Oracle 1Z0-770 (Oracle APEX Developer Professional) Exam is a certification exam designed to test the skills and expertise of professionals in developing robust and scalable web applications using Oracle Application Express (APEX). APEX is a development tool designed specifically for Oracle databases, which allows developers to build web applications with ease and efficiency. Oracle APEX Developer Professional certification is intended for individuals who wish to further their career as an Oracle APEX developer and showcase their expertise to potential employers.

Oracle APEX Developer Professional certification is ideal for individuals who have experience with Oracle databases and APEX development and want to take their skills to the next level. Oracle APEX Developer Professional certification is also suitable for developers who want to specialize in APEX development and enhance their knowledge of the latest APEX features and functionalities. The 1Z0-770 Exam is a challenging yet rewarding certification that can help candidates stand out in the competitive job market.

Oracle APEX Developer Professional Sample Questions (Q104-Q109):

NEW QUESTION # 104

Which two actions can you perform using the Object Browser?

- A. Browse database objects of the current schema.
- B. Export and import SQL scripts.
- C. Restore dropped database objects.
- D. Create and run SQL scripts.
- E. Create a lookup table based on a column in the current table.

Answer: A,E

Explanation:

Explanation

Object Browser is a utility in SQL Workshop that enables developers to browse, create, and edit objects in a database. Some of the actions that you can perform using Object Browser are:

Browse database objects of the current schema. You can view the details of an object by selecting it from the Object Tree and then clicking the different object detail tabs.

Create a lookup table based on a column in the current table. You can use the Create Lookup Table option in the Column Details tab to create a new table that stores the distinct values of the selected column and a foreign key constraint to reference it. You cannot restore dropped database objects, create and run SQL scripts, or export and import SQL scripts using Object Browser.

You can use other utilities in SQL Workshop to perform these actions, such as Recycle Bin, SQL Commands, and SQL Scripts.

NEW QUESTION # 105

Which two statements are true about creating and using an interactive report?

- A. You can specify an Authorization Scheme at the column level.
- B. You cannot restrict users from saving private reports by using the Authorization Scheme.
- C. You cannot customize the Search Button Label.
- D. You cannot include Form Page when creating an interactive report page using the Create Page Wizard.

Answer: A,C

NEW QUESTION # 106

I want to hide a few columns in my interactive report. To do so, which option should I choose from the Actions menu?

- A. Data
- B. Format
- C. Filter
- D. columns

Answer: D

Explanation:

Explanation

To hide a few columns in your interactive report, you should choose Columns from the Actions menu. This option allows you to select which columns to show or hide in your report by using checkboxes. You can also reorder or resize the columns from this option.

The other options are incorrect because:

Filter allows you to filter the data in your report by applying one or more conditions on the columns.

Data allows you to add, modify, or delete data in your report by using inline editing or modal dialog editing.

Format allows you to change the appearance of your report by applying conditional formatting rules or highlighting colors.

NEW QUESTION # 107

Choose the three types of page items that can be placed on a page.

- A. Date Picker
- B. Global variable
- C. Checkbox
- D. Select List

Answer: A,C,D

Explanation:

Explanation

A page item is a component that is part of an HTML form and can accept user input or display output. There are many types of page items that can be placed on a page in APEX, such as text fields, text areas, radio groups, checkboxes, date pickers, select lists, popup LOVs, shuttles, and so on. Each type of page item has different properties and attributes that affect its appearance and functionality. Three of the types of page items that can be placed on a page are:

Checkbox: A checkbox is a page item that displays one or more options that can be selected or deselected by the user. A checkbox can have either static values or dynamic values based on a list of values (LOV). A checkbox can also have different display styles, such as pill button or switch.

Date Picker: A date picker is a page item that displays a text field with an icon that opens a calendar popup when clicked. A date picker allows users to enter or select a date value in a specific format. A date picker can also have different attributes, such as minimum or maximum date, display format, or time picker.

Select List: A select list is a page item that displays a drop-down list of options that can be selected by the user. A select list can have either static values or dynamic values based on a list of values (LOV). A select list can also have different attributes, such as multiple selection, null value display text, or cascading LOV.

NEW QUESTION # 108

While migrating apps, once the database objects are created in the target environment, you can load the data using which of the components?

- A. Data Workshop
- B. Quick SQL
- C. App Builder
- D. Data Generator

Answer: A

Explanation:

Explanation

Data Workshop is a feature in Oracle APEX that enables you to load and unload data to and from the database.

You can use Data Workshop to copy data between Oracle databases or between an Oracle database and external files. Data copying is accomplished by exporting and importing data, and by unloading and loading data. While migrating apps, once the database objects are created in the target environment, you can load the data using Data Workshop by following these steps:

Access Data Workshop by clicking Utilities and then Data Workshop in SQL Workshop.

Click Load Data.

Select a data source type, such as Text File (CSV), XML File (XML), Copy & Paste (Spreadsheet), or Object Store Reference (Autonomous Database only).

Specify a file name or location for your data source.

Select a table name for your data destination.

Map your data columns to your table columns.
Review your data load settings and click Load Data.
