CFA Institute Sustainable Investing Certificate (CFA-SIC) Exam Sample Questions (Q481-Q486):

NEW QUESTION # 481

For investors in corporate fixed-income securities, engagement is most likely to be effective if conducted:

- A. Through the divestment process
- **B. Before the security is issued**
- C. At the annual general meeting via voting

Answer: B

Explanation:

Engagement is most effective if conducted before a corporate fixed-income security is issued. Engaging early in the process allows investors to influence the terms of the bond, including the company's commitments to ESG practices, before it enters the market. NEW QUESTION # 482

Growing income inequality most likely leads to:

- A. Higher purchasing power among the middle class.
- **B. Less social mobility.**
- C. More educational opportunities.

Answer: B

Explanation:

Growing income inequality is associated with reduced social mobility (Option A), meaning that individuals from lower-income backgrounds face greater challenges in moving up the economic ladder. This happens because:

Lower-income families often have limited access to quality education, healthcare, and job opportunities, making it harder for individuals to improve their economic status.

Wealth concentration among the elite leads to a decline in broad-based economic opportunity.

More educational opportunities (Option B) is incorrect because education tends to become more expensive and less accessible as income inequality increases.

Higher purchasing power among the middle class (Option C) is incorrect because growing inequality usually means that the middle class shrinks, and wealth is concentrated among the wealthy, reducing overall purchasing power.

NEW QUESTION # 483

Leased assets of a company contribute to:

- A. Scope 1 emissions.
- **B. Scope 3 emissions.**
- C. Scope 2 emissions.

Answer: B

Explanation:

GHG emissions are categorized into three scopes:

Scope 1: Direct emissions from a company's owned facilities and vehicles.

Scope 2: Indirect emissions from purchased electricity, heating, or cooling.

Scope 3: Indirect emissions from the value chain, including leased assets, supply chain, employee commuting, and business travel.

Why C (Scope 3) is correct:

Leased assets are not directly owned but still contribute to a company's carbon footprint.

Why not A or B?

A (Scope 1) applies to owned assets, not leased ones.

B (Scope 2) applies to purchased electricity, not leased buildings or vehicles.

NEW QUESTION # 484

Interest by retail investors in responsible investing has:

- **A. been growing over time**
- B. remained stable over time
- C. been declining over time

Answer: A

Explanation:

Interest by retail investors in responsible investing has been growing over time. This trend is driven by increased awareness of ESG issues and the recognition that sustainable investing can align with both personal values and financial goals.

Growth in interest: Surveys and market data consistently show that more retail investors are considering ESG factors in their investment decisions. This trend is supported by the increasing availability of ESG-related investment products and greater transparency from companies regarding their ESG practices.

Drivers: Factors contributing to this growth include heightened awareness of environmental and social issues, the impact of regulatory changes promoting ESG disclosures, and the perception that ESG investing can mitigate risks and uncover opportunities.

NEW QUESTION # 485

Index-based ESG strategies are typically optimized to:

- A. Maximize ESG improvement while keeping tracking error within an acceptable range
- B. Maximize return while keeping both ESG improvement and tracking error within acceptable ranges
- C. Minimize tracking error while keeping ESG improvement within an acceptable range

Answer: A

Explanation:

ESG index strategies are typically optimized to improve ESG scores while keeping tracking error under control. Tracking error measures how much an ESG index deviates from its traditional benchmark, and investors prefer to limit large deviations.

Maximizing return (C) is not the primary goal of ESG index investing; risk-adjusted performance and sustainability alignment are more important.
