Take Your HP HPE6-A85 Practice Exam In Different Formats

TorrentValid HPE6-A85 products are honored by thousands, considerably recognized across the industry. Successful candidates preferably suggest our products as they provide the best possible returns for your invested money. Our professionals have devoted themselves to deliver the required level of efficiency for our customers. Our well repute in industry highlights our tremendous success record and makes us incomparable choice for HPE6-A85 Exams preparation. 100% guaranteed success for all HPE6-A85 exams is offered at TorrentValid, marks key difference with competing brands. Your investment with TorrentValid never takes any down turn as we owe the whole responsibility for any kind of loss that occurs through your failure.

HP HPE6-A85 (Aruba Campus Access Associate) Certification Exam is designed to test the knowledge and skills of individuals who work with Aruba networks. Aruba is a leading provider of wireless networking solutions, and the HPE6-A85 Exam is an entry-level certification that demonstrates a foundational understanding of Aruba's campus access technologies.

Get HP HPE6-A85 Exam Questions To Achieve High Score

These Aruba Campus Access Associate Exam (HPE6-A85) practice test questions also boost your confidence. If you have

prepared well, tried all the HP Aruba Campus Access Associate Exam Certification Exams, and understood each concept clearly, there is minimal or no chance of failure. Desktop Practice exam software and web-based Aruba Campus Access Associate Exam (HPE6-A85) practice test are available at TorrentValid.

HP Aruba Campus Access Associate Exam Sample Questions (Q54-Q59):

NEW QUESTION # 54
What happens when the signal from an AP weakens by being absorbed as it moves through an object?

- A. Signal to Noise Ratio (SNR) decreases
- B. APs will use bonded channels to decrease latency to clients
- C. Signal to Noise Ratio (SNR) increases
- D. Aruba Central dynamically moves clients to neighboring APs

Answer: A

Explanation:
Signal to noise ratio (SNR) is a measure that compares the level of a desired signal to the level of background noise. SNR is defined as the ratio of signal power to the noise power, often expressed in decibels (dB). A high SNR means that the signal is clear and easy to detect or interpret, while a low SNR means that the signal is corrupted or obscured by noise and may be difficult to distinguish or recover1. When the signal from an AP Access Point. AP is a device that allows wireless devices to connect to a wired network using Wi-Fi, or related standards. weakens by being absorbed as it moves through an object, such as a wall or a furniture, the signal power decreases. This reduces the SNR and affects the quality of the wireless connection. The noise power may also increase due to interference from other sources, such as other APs or devices operating in the same frequency band2. Therefore, the correct answer is that SNR decreases when the signal from an AP weakens by being absorbed as it moves through an object. NEW QUESTION # 55
After having configured the edge switch uplink as requested your colleague says that they have failed to ping the core You ask your colleague to verify the connection is plugged in and the switch is powered on They confirm that both are correct You attempt to ping the core switch and confirm that the ping is failing.
Knowing the nature of this deployment, what commands might you use to troubleshoot this issued

- A. diagnostic diag cable-diag 1/1/51 diag cable-diag 1/1/52 - to view diagnostic information for the physical link to get a status on any interruptions to Layer 1 connectivity, show ip route - to verify that the default gateway is present in the routing table show ip ospf - to check whether there is a layer 3 routing protocol enabled show ip dns - to view whether there is a valid dns source
- B. Show run - to view the running configuration of the switch Show run | begin 20 "vlan 20" - to ensure VLAN 20 was correctly added to the database show run | begin 20 'interface vlan 20' - to view the L3 SVI configuration Show run interface 1/1/51.1/1/52 - to ensure the physical interfaces are no shut and were added as members of LAG 1 Show run int lag 1 - to verify LACP mode active was configured to eliminate LACP blocking states
- C. Ping 10.1.1.1 - ping the core to attempt to verify connectivity show lacp agg - to verify which link aggregations are currently configured using which physical ports show lacp int - to verify the LACP status and whether any links are blocking in your topology show lldp neighors - to verify whether you are able to see the Core as an L2 neighbor to verify if the correct links are plugged in to the correct ports show run interface 1/1/51.1/1/52-to ensure the physical interfaces are no-shut and members of the lag show run interface lag 1 - to ensure the correct vlan trunking configuration is applied to the logical interface show run int vlan 20 - to ensure you have the L3 SVI no shut and configured in the correct subnet
- D. Ping 10.11 1 - ping the core to attempt to verify connectivity Show trunk - to verify if the LAG interface was correctly added to the switch Show spanning tree - to check for spanning-tree blocked states Show port-access clients interface all - to view any port-access blocking states or failed authentication attempts on all interfaces Show run interface vlan20 - to double check the layer 3 svi configuration is correct for l_3 connectivity Show lldp neighors - to verify whether you are able to see the Core as an L2 neighbor to verify if the correct links are plugged in to the correct ports

Answer: C

Explanation:
Explanation
These commands might help troubleshoot this issue as they check various aspects of the connectivity between the edge switch and the core switch, such as Layer 3 reachability, Layer 2 adjacency, LACP configuration and status, VLAN trunking configuration, and

interface status.

NEW QUESTION # 56

The customer requires two Aruba CX 6200F 48G switches to be connected to each other with a distance of 80m/252ft between wiring closets. Switches need to have reservation for VSF expansion with ring topology in each cabinet.

What is a valid configuration for a redundant link-aggregation port configuration?

- A. Ports 1/1/1 and 1/1/2 for LAG
- B. Ports 1/1/47 and 1/1/48 for LAG
- C. Ports 1/1/51 and 1/1/52 with SFP+ for LAG
- D. Ports 1/1/49 and 1/1/50 with SFP28 for LAG

Answer: C

Explanation:
For an 80m distance between wiring closets, using SFP+ transceivers is appropriate as they can support longer distances than standard copper interfaces. Ports 1/1/51 and 1/1/52 are typically reserved for uplinks on Aruba CX 6200F 48G switches and can support SFP+ transceivers, making them suitable for a redundant link-aggregation port configuration.

NEW QUESTION # 57

You are working with a pair of 6300M switches in a VSF stack. The switch has 48 SmartRate 5G ports, 2 SFP28 ports, and 2 SFP56 ports. Both SFP56 ports are used for stacking.

You need to provide an LACP connection to another identical stack with the maximum available bandwidth possible. What should you configure?

- A. a four-member LAG using 2 SFP28 ports on each switch
- B. an eight-member LAG using 2 SFP28 ports and 2 SR5 ports on each switch
- C. an eight-member LAG using 4 SR5 ports on each switch
- D. a 16-member LAG using 2 SFP28 ports and 6 SR5 ports on each switch

Answer: D

Explanation:
To provide an LACP connection with the maximum available bandwidth, one should configure a link aggregation group (LAG) using all available ports that can be used for data transfer. Since the SFP56 ports are used for stacking, the next best option is to use the 2 SFP28 ports and as many SmartRate 5G (SR5) ports as possible on each switch, which would allow for a 16-member LAG, with 2 SFP28 and 6 SR5 ports on each switch contributing to the LAG.

NEW QUESTION # 58

Which Protocol Data Unit (PDU) represents the data link layer PDU?

- A. PDU3 - Packet
- B. PDU4 - Segment
- C. PDU2 - Frame
- D. PDU1 - Signal

Answer: C

Explanation:
A frame is the data link layer PDU that encapsulates the network layer PDU (packet) with a header and a trailer that contain information such as source and destination MAC addresses, frame type, error detection, etc. A frame is transmitted over a physical medium such as Ethernet, Wi-Fi, etc. Reference:

NEW QUESTION # 59

......

Nowadays, it is hard to find a desirable job. A lot of people are forced to live their jobs because of lack of skills. So you must learn something in order to be washed out by the technology. Then our HPE6-A85 study materials totally accord with your demands. With the latest information and knowledge in our HPE6-A85 Exam Braindumps, we help numerous of our customers get better job or career with their dreaming HPE6-A85 certification.
