Quiz 2025 SAP C_IBP_2502 – High Pass-Rate Reliable Exam Papers

You can access the premium PDF file of SAP Certified Associate - SAP IBP for Supply Chain C_IBP_2502 dumps right after making the payment. It will contain all the latest C_IBP_2502 exam dumps questions based on the official C_IBP_2502 exam study guide. These are the most relevant SAP C_IBP_2502 questions that will appear in the actual SAP Certified Associate - SAP IBP for Supply Chain exam. Thus you won't waste your time preparing with outdated C_IBP_2502 Dumps. You can go through SAP C_IBP_2502 dumps questions using this PDF file anytime, anywhere even on your smartphone.

SAP Certified Associate - SAP IBP for Supply Chain Sample Questions (Q31-Q36):

NEW QUESTION # 31

What is a feature of the weighted average key figure calculation?

- A. The numerator of the calculation should be stored
- B. Attributes can be used in weighted average key figure calculation
- C. The first parameter of the formula acts as a weight

- **D. The numerator's value should include multiplication by the weight**

Answer: D

Explanation:

Weighted average calculations in SAP IBP (e.g., $KF3 = \text{SUM}(KF1 * KF2) / \text{SUM}(KF2)$) use a weight key figure, configured in the Planning Areas app, per SAP IBP's documentation.

* Option A: The numerator of the calculation should be stored. This is incorrect. The numerator (e.g., value * weight) is calculated, not necessarily stored.

* Option B: The first parameter of the formula acts as a weight. This is incorrect. The weight is explicitly defined (e.g., KF2), not assumed as the first parameter.

* Option C: Attributes can be used in weighted average key figure calculation. This is incorrect.

Attributes as key figures provide static values, but weights are typically key figures, not attributes directly.

* Option D: The numerator's value should include multiplication by the weight. This is correct. In a weighted average (e.g., $(KF1 * KF2) / \text{SUM}(KF2)$), the numerator multiplies the value (KF1) by the weight (KF2), a defining feature, per SAP IBP's calculation rules.

Thus, D is the correct feature, per SAP IBP's official calculation logic.

NEW QUESTION # 32

You need to create time periods for the time profile in a planning area. What should you be aware of when running the Create Time Periods application job?

- A. This application job can also be triggered from SAP IBP, add-in for Microsoft Excel
- **B. A time profile has to be activated so that the application job can proceed**
- C. The planning area to which the time profile is assigned must be active
- D. It is mandatory to specify the planning area in the Parameter Section of the application job

Answer: B

Explanation:

The Create Time Periods job in SAP IBP (via the Application Jobs app) generates time periods (e.g., weeks, months) for a time profile, a prerequisite for planning.

* Option A: The planning area to which the time profile is assigned must be active. This is incorrect.

The planning area doesn't need to be active during time period creation; the job operates on the time profile independently.

* Option B: This application job can also be triggered from SAP IBP, add-in for Microsoft Excel. This is incorrect. The job is triggered via the Application Jobs app (Fiori), not the Excel add-in, which focuses on planning views.

* Option C: A time profile has to be activated so that the application job can proceed. This is correct.

The time profile must be activated (i.e., saved and valid) before the job can generate periods, ensuring configuration readiness, per SAP IBP's time profile documentation.

* Option D: It is mandatory to specify the planning area in the Parameter Section of the application job. This is incorrect. The job requires the time profile ID, not the planning area, as parameters, though the time profile is linked to a planning area.

Thus, C is the key awareness point, per SAP IBP's official job requirements.

NEW QUESTION # 33

As an architect, you are configuring the Planner Workspaces user interface settings. Which appearance settings are on your to-do list? Note: There are 3 correct answers to this question.

- A. Define key figure formatting
- **B. Adding planning view**
- **C. Add custom alerts**
- D. Add Navigation profile
- **E. Add playbooks for alerts**

Answer: B,C,E

Explanation:

The Planner Workspaces app in SAP IBP is a Fiori-based UI that integrates planning tools, analytics, and alerts. Configuring its appearance involves customizing the layout and functionality for planners, as per SAP IBP's official documentation.

* Option A: Adding planning view. This is correct. Planner Workspaces allows embedding planning views (e.g., from Excel

templates) as components, a key appearance setting to display data, per SAP IBP's workspace configuration guides.

* Option B: Add Navigation profile This is incorrect. "Navigation profile" is not a standard term in Planner Workspaces settings. Navigation is managed via Fiori launchpad roles, not workspace-specific appearance.

* Option C: Define key figure formatting This is incorrect. Key figure formatting (e.g., decimals, units) is configured in the Planning Areas app or Excel add-in, not directly in Planner Workspaces' appearance settings.

* Option D: Add custom alerts This is correct. Custom alerts (e.g., threshold-based notifications) can be added to Planner Workspaces, enhancing visibility of issues, a supported appearance feature, per SAP IBP's documentation.

* Option E: Add playbooks for alerts This is correct. Playbooks (guided actions for alerts) can be embedded in Planner Workspaces, customizing the UI to support decision-making, per SAP IBP's alert management features.

Thus, A, D, and E are appearance settings for Planner Workspaces, per SAP IBP's official capabilities.

NEW QUESTION # 34

Which of the following is a feature of Transportation Load Building (TLB)?

- A. Loads are calculated based on transportation lanes and modes of transport
- **B. It uses rule-based planning to create transportation loads**
- C. Loads are integrated into SAP ERP or SAP S/4HANA as distribution receipts
- D. Loads are calculated based on the minimum utilization of equipment

Answer: B

Explanation:

Transportation Load Building (TLB) in SAP IBP (part of Supply Chain Control Tower or integration with SAP TM) optimizes the consolidation of shipments into transportation loads based on constraints like capacity and rules.

* Option A: Loads are calculated based on transportation lanes and modes of transport This is partially true but not the defining feature. TLB considers lanes and modes (e.g., truck, rail) as inputs, but its core function is grouping shipments, not merely calculating based on these. It's too generic to be the standout feature.

* Option B: Loads are integrated into SAP ERP or SAP S/4HANA as distribution receipts This is incorrect. TLB focuses on planning loads within SAP IBP or TM, not direct integration into ERP

/S4HANA as "distribution receipts." Integration might occur downstream, but it's not a TLB feature.

* Option C: It uses rule-based planning to create transportation loads This is correct. TLB employs configurable rules (e.g., maximum weight, volume, compatibility) to consolidate shipments into loads.

For example, it might ensure a truck's capacity is fully utilized while respecting delivery windows, a hallmark of TLB in SAP IBP's supply planning capabilities, as per official documentation.

* Option D: Loads are calculated based on the minimum utilization of equipment This is incorrect.

TLB aims to maximize, not minimize, equipment utilization to reduce costs. Minimum utilization might be a constraint, but it's not the calculation basis.

Thus, C is the defining feature of TLB, reflecting its rule-based approach, consistent with SAP IBP's supply chain optimization tools.

NEW QUESTION # 35

Analytics charts are created by the user in the Advanced Analytics application. What can the user do in the Advanced Analytics app? Note: There are 2 correct answers to this question.

- A. Merge charts together
- **B. Group data**
- **C. Apply filters on the data**
- D. Trigger export to Manage Analytics Stories

Answer: B,C

Explanation:

The Advanced Analytics app in SAP IBP allows users to create and customize charts for insights, with specific interactive features.

* Option A: Trigger export to Manage Analytics Stories This is incorrect. Charts are exported from Manage Analytics Stories, not Advanced Analytics directly; the flow is reversed.

* Option B: Merge charts together This is incorrect. Merging charts isn't a feature in Advanced Analytics; it supports individual chart creation.

* Option C: Apply filters on the data This is correct. Users can apply filters (e.g., by Product, Time) to refine chart data, a core feature, per SAP IBP's analytics documentation.

* Option D: Group data This is correct. Grouping (e.g., by Region) aggregates data in charts, a standard capability, per SAP IBP's

Advanced Analytics guides.

Thus, C and D are actions in Advanced Analytics, per SAP IBP's official functionality.

NEW QUESTION # 36

.....

We all know that most candidates will worry about the quality of our product, In order to guarantee quality of our study materials, all workers of our company are working together, just for a common goal, to produce a high-quality product; it is our C_IBP_2502 exam questions. If you purchase our C_IBP_2502 Guide Torrent, we can guarantee that we will provide you with quality products, reasonable price and professional after sales service. I think our C_IBP_2502 test torrent will be a better choice for you than other study materials.

C_IBP_2502 Prep Guide: https://www.dumpkiller.com/C_IBP_2502_braindumps.html

The high relevant & best quality is the key factor for the success of SAP Certified Application Associate C_IBP_2502 exam accreditations, We aim to help our candidates pass C_IBP_2502 exam with high accuracy of C_IBP_2502 real question and answer, What is the main reason on earth that our products become so magic and powerful to draw more and more customer in involving into the purchase of our C_IBP_2502 learning materials: SAP Certified Associate - SAP IBP for Supply Chain, Now, take our C_IBP_2502 as your study material, and prepare with careful, then you will pass successful.

After all the pertinent details have been spelled out, the text C_IBP_2502 shows how the abstract constructs in the Identity Metasystem find a concrete counterpart in the web services world.

This is done to help with program compatibility, The high relevant & best quality is the key factor for the success of SAP Certified Application Associate C_IBP_2502 Exam accreditations.

Quiz 2025 SAP Authoritative C_IBP_2502: Reliable SAP Certified Associate - SAP IBP for Supply Chain Exam Papers

We aim to help our candidates pass C_IBP_2502 exam with high accuracy of C_IBP_2502 real question and answer, What is the main reason on earth that our products become so magic and powerful to draw more and more customer in involving into the purchase of our C_IBP_2502 learning materials: SAP Certified Associate - SAP IBP for Supply Chain?

Now, take our C_IBP_2502 as your study material, and prepare with careful, then you will pass successful, If you want to pass it successfully please choose our C_IBP_2502 exam cram pdf.
