Tableau Certified Data Analyst Sample Questions (Q133-Q138):

NEW QUESTION # 133

You have the following chart that shows profits and discounts over time.

You need to combine the lines to appear as shown in the following chart.

What should you do?

- A. Drag Discount to Color on the Marks card
- B. Drag Discount to the Columns shelf
- **C. Set Discount to Dual Axis**
- D. Convert Discount to Discrete

Answer: C

Explanation:

To combine the lines to appear as shown in the second chart, you should set Discount to Dual Axis. Dual Axis is a feature that allows you to show two measures on two separate axes on one chart. You can create a dual axis by right-clicking on a measure on any shelf and selecting Dual Axis from the menu. This will create two axes on one chart and synchronize their scales.

In this case, you want to show Profit and Discount on two separate axes on one chart. You can right-click on Discount on any shelf and select Dual Axis from the menu. This will create a dual axis chart that shows Profit and Discount as two lines with different colors.

The other options are not correct for this scenario. Dragging Discount to Color on the Marks card will change the color of Profit based on Discount, but it will not show two lines. Converting Discount to Discrete will change Discount from a green pill to a blue pill, but it will not affect how it appears on the chart. Dragging Discount to Columns shelf will create two separate charts for Profit and Discount, but it will not combine them. You have the following dataset

You need to create the following visualization.

Which quick table calculation should you drag to Text on the Marks card?

- A. Percentile
- **B. Percent of Total**
- C. Percent Difference
- D. Compound Growth Rate

Answer: B

Explanation:

we need to create a quick table calculation that shows the percent of total sales for each category and sub- category. To do this, we can follow these steps:

- * Drag Category to Columns and Sub-Category to Rows.
- * Drag Sales to Text on the Marks card.
- * Right-click Sales on the Marks card and select Quick Table Calculation > Percent of Total.
- * Right-click Sales on the Marks card again and select Compute Using > Category.

This will create a quick table calculation that shows the percent of total sales for each sub-category within each category. The visualization will look like this:
