Tableau Desktop Specialist Sample Questions (Q54-Q59):

NEW QUESTION # 54

As a general best practice, how many categories can a pie chart display effectively?

- A. 2 to 8
- B. 3 to 5
- **C. 2 to 5**
- D. 3 to 7

Answer: C

Explanation:

As a general best practice, your pie chart should contain 2 to 5 categories. Anything more than that is not easy for the eyes to distinguish. This is a common question and mentioned in Tableau's own eLearning module as well!

See how to build a pie chart:

NEW QUESTION # 55

Which of the following would you use to connect to multiple tables in a single data source at once?

- A. A Join
- B. A Set
- C. A Blend
- D. A Hierarchy

Answer: A

Explanation:

The data that you analyze in Tableau is often made up of a collection of tables that are related by specific fields (that is, columns). Joining is a method for combining data on based on those common fields. The result of combining data using a join is a virtual table that is typically extended horizontally by adding columns of data.

For example, consider the following two tables originating from a single data source:

Table 1

ID	First Name	Last Name	Publisher Type
20034	Adam	Davis	Independent
20165	Ashley	Garcia	Big
20233	Susan	Nguyen	Small/medium

Table 2

Book Title	Price	Royalty	ID
Weather in the Alps	19.99	5,000	20165
My Physics	8.99	3,500	20800
The Magic Shoe Lace	15.99	7,000	20034

We can combine these 2 tables, simply by joining the tables on ID to answer questions like, "How much was paid in royalties for authors from a given publisher?". By combining tables using a join, you can view and use related data from different tables in your analysis.

ID	First Name	Last Name	Publisher Type	Book Title	Price	Royalty
20034	Adam	Davis	Independent	The Magic Shoe Lace	15.99	7,000
20165	Ashley	Garcia	Big	Weather in the Alps	19.99	5,000

NEW QUESTION # 56

Which of the following are valid use-cases for the 'Manage Metadata' functionality?

- A. To clean and automatically fix the data issues in our data source
- B. To see the table a field belongs to
- C. To see the field name in the original data source
- D. To view all hidden fields

Answer: B,C,D

Explanation:

Top of Form

To clean and automatically fix the data issues in our data source - This is the definition of Data Interpreter.

To rename the field in the original data source - We never modify the original data source when managing metadata. All changes are local to Tableau for our convenience only.

All other options can be modified using the Manage Metadata property.

NEW QUESTION # 57

How does Tableau know at which level to aggregate values?

- A. Tableau doesn't aggregate values, we do!
- B. Values are always aggregated at the level of the Date Part
- C. Aggregation is always done by using Tableau special formulas
- D. Values are always aggregated at the level of granularity of the worksheet.

Answer: D

Explanation:

Explanation

In Tableau, you can aggregate measures or dimensions, though it is more common to aggregate measures.

Whenever you add a measure to your view, an aggregation is applied to that measure by default. The type of aggregation applied varies depending on the context of the view.

When you add a measure to the view, Tableau automatically aggregates its values. Sum, average, and median are common aggregations; for a complete list, see List of Predefined Aggregations in Tableau.

The current aggregation appears as part of the measure's name in the view. For example, Sales becomes SUM(Sales). Every measure has a default aggregation which is set by Tableau when you connect to a data source. You can view or change the default aggregation for a measure-see Set the Default Aggregation for a Measure.

You can change the aggregation for a measure in the view from its context menu:

NEW QUESTION # 58

Which of the following are compelling reasons to use a Stacked Bar Chart?

- A. To be able to visualize complex information with fewer bars / marks
- B. To visualize parts of a whole
- C. To easily visualize trends over time
- D. To visualize each discrete category using a separate bar.

Answer: A,B

Explanation:

Stacked bar charts will usually have lesser number of bars compared to a normal bar chart:

Normal bar chart - 9 bars

Stacked Bar Chart - 3 bars

We can easily see a 'part-of-a-whole' methodology being used here as well - we are seeing the breakdown of Segments within each Category.

To easily visualize trends over time - This is the definition of a line chart.

To visualize each discrete category using a separate bar - This can be accomplished using a simple bar chart, why use a stacked one?
