HashiCorp Terraform-Associate-003 Exam Reviews & Terraform-Associate-003 Latest Dumps Files

We have the first-rate information safety guarantee system for the buyers who buy the Terraform-Associate-003 questions and answers of our company, we can ensure that the information of your name, email, or product you buy. We respect the private information of every customer, and we won't send the junk information to you to bother. Besides, you will get Terraform-Associate-003 Questions and answers downloading link within ten minutes, and our system will send you the update version to your mailbox.

HashiCorp Certified: Terraform Associate (003) (HCTA0-003) Sample Questions (Q203-Q208):

NEW QUESTION # 203

HashiCorp Configuration Language (HCL) supports user-defined functions.

- A. False
- B. True

Answer: A

Explanation:

HashiCorp Configuration Language (HCL) does not support user-defined functions. You can only use the built-in functions that are provided by the language. The built-in functions allow you to perform various operations and transformations on values within expressions. The general syntax for function calls is a function name followed by comma-separated arguments in parentheses, such as `max(5, 12, 9)`. You can find the documentation for all of the available built-in functions in the Terraform Registry or the Packer Documentation, depending on which tool you are using. Reference = : Functions - Configuration Language | Terraform : Functions - Configuration Language | Packer

NEW QUESTION # 204

If a module declares a variable with a default, that variable must also be defined within the module.

- A. False
- B. True

Answer: A

Explanation:

Explanation

A module can declare a variable with a default value without requiring the caller to define it. This allows the module to provide a sensible default behavior that can be customized by the caller if needed. References = [Module Variables]

NEW QUESTION # 205

A senior admin accidentally deleted some of your cloud instances. What will Terraform do when you run `terraform apply`?

- A. Stop and generate an error message about the missing instances.
- B. Build a completely brand new set of infrastructure.
- C. Rebuild only the instances that were deleted.
- D. Tear down the entire workspace's infrastructure and rebuild it.

Answer: C

Explanation:

Comprehensive and Detailed in-Depth Explanation: Terraform detects infrastructure drift by comparing the state file with the actual infrastructure.

* When an instance is manually deleted, Terraform sees it as missing and marks it for recreation.

* Running `terraform apply` will only recreate the missing instances while leaving the rest of the infrastructure unchanged.

Explanation of incorrect answers:

* A (Tear down everything and rebuild)- Incorrect. Terraform does not destroy existing infrastructure unless explicitly told to.

* B (Build a completely new set of infrastructure)- Incorrect. Terraform does not create duplicates unless configuration changes.

* D (Stop and error out)- Incorrect. Terraform does not fail; it rebuilds missing resources automatically.

Official Terraform Documentation Reference: Handling Infrastructure Drift

NEW QUESTION # 206

In a HCP Terraform/Terraform Cloud workspace linked to a version control repository, speculative plan runs start automatically when you merge or commit changes to version control.

- A. False
- B. True

Answer: B

Explanation:

Speculative Plans: Terraform Cloud's speculative plan feature runs automatically when changes are detected in a linked VCS repository, enabling users to review potential infrastructure changes without committing them.

Automatic Integration: This feature automates the planning process by triggering when changes are committed, aiding teams in previewing infrastructure changes seamlessly.

For further understanding, see the Terraform Cloud VCS Integration documentation.

NEW QUESTION # 207

How would you output returned values from a child module in the Terraform CLI output?

- **A. Declare the output in both the root and child module**
- B. Declare the output in the root configuration
- C. None of the above
- D. Declare the output in the child module

Answer: A

Explanation:

To output returned values from a child module in the Terraform CLI output, you need to declare the output in both the child module and the root module. The child module output will return the value to the root module, and the root module output will display the value in the CLI.

References = [Terraform Outputs]

NEW QUESTION # 208

.....

You need to do something immediately to change the situation. For instance, the first step for you is to choose the most suitable Terraform-Associate-003 actual dumps for your coming exam. Just like the old saying goes, the little things will determine success or failure. So the study materials is very important for you exam, because the study materials will determine whether you can pass the Terraform-Associate-003 Exam successfully or not. However, how to choose the best and suitable study materials for yourself in a short time? It is very difficult for a lot of people to do a correct choice, especially these people who have no any experience about the Terraform-Associate-003 exam. We would like to tell you how to buy the most suitable and helpful study materials.
