Online Terraform-Associate-003 Version | 100% Terraform-Associate-003 Accuracy

Differ as a result the Terraform-Associate-003 questions torrent geared to the needs of the user level, cultural level is uneven, have a plenty of college students in school, have a plenty of work for workers, and even some low education level of people laid off, so in order to adapt to different level differences in users, the Terraform-Associate-003 exam questions at the time of writing teaching materials with a special focus on the text information expression, as little as possible the use of crude esoteric jargon, as much as possible by everyone can understand popular words to express some seem esoteric knowledge, so that more users through the Terraform-Associate-003 Prep Guide to know that the main content of qualification examination, stimulate the learning enthusiasm of the user, arouse their interest in learning.

HashiCorp Certified: Terraform Associate (003) (HCTA0-003) Sample Questions (Q115-Q120):

NEW QUESTION # 115

Which of the following is not a valid Terraform variable type?

- A. array

- B. nap
- C. list
- D. string

Answer: A

Explanation:

This is not a valid Terraform variable type. The other options are valid variable types that can store different kinds of values.

NEW QUESTION # 116

You have used Terraform to create an ephemeral development environment in the cloud and are now ready to destroy all the infrastructure described by your Terraform configuration. To be safe, you would like to first see all the infrastructure that Terraform will delete.

Which command should you use to show all of the resources that will be deleted? Choose two correct answers.

- A. Run `terraform state rm`
- B. Run `terraform destroy` and it will first output all the resource that will be deleted before prompting for approval
- C. Run `terraform plan -destroy`
- D. Run `terraform show -destroy`

Answer: B,C

Explanation:

To see all the resources that Terraform will delete, you can use either of these two commands:

* `terraform destroy` will show the plan of destruction and ask for your confirmation before proceeding.

You can cancel the command if you do not want to destroy the resources.

* `terraform plan -destroy` will show the plan of destruction without asking for confirmation. You can use this command to review the changes before running `terraform destroy`. References = : Destroy Infrastructure : Plan Command: Options

NEW QUESTION # 117

You modified your Terraform configuration to fix a typo in the resource ID by renaming it from `photoes` to `photos`. What configuration will you add to update the resource ID in state without destroying the existing resource?

Original configuration:

```
resource "aws_s3_bucket" "photoes" {
  bucket_prefix = "images"
}
```

Updated configuration:

```
resource "aws_s3_bucket" "photos" {
  bucket_prefix = "images"
}
```

- A. `moved {`
 `bucket.photoes = aws_s3_bucket.photos`
 `}`
- B. None. Terraform will automatically update the resource ID.
- C. `moved {`
 `aws_s3_bucket.photoes = aws_s3_bucket.photos`
 `}`
- D. `moved {`
 `from = aws_s3_bucket.photoes`
 `to = aws_s3_bucket.photos`
 `}`

Answer: D

Explanation:

Detailed Explanation:

* Rationale for Correct Answer (A): Terraform does not automatically update state references when resource identifiers are renamed. Instead, you must use a `moved` block in your configuration to inform Terraform how to map the old resource to the new

one. This prevents Terraform from destroying and recreating the resource.

* Analysis of Incorrect Options:

* B & C: Incorrect syntax - moved requires from and to.

* D: Incorrect, Terraform won't auto-detect renames and will plan to destroy and recreate the resource unless a moved block is provided.

* Key Concept: The moved block is essential for refactoring resource names without losing resources in state.

NEW QUESTION # 118

What value does the Terraform Cloud private registry provide over the public Terraform Module Registry?

- **A. The ability to restrict modules to members of Terraform Cloud or Enterprise organizations**
- B. The ability to tag modules by version or release
- C. The ability to share modules with public Terraform users and members of Terraform Cloud Organizations
- D. The ability to share modules publicly with any user of Terraform

Answer: A

Explanation:

The Terraform Cloud private registry provides the ability to restrict modules to members of Terraform Cloud or Enterprise organizations. This allows you to share modules within your organization without exposing them to the public. The private registry also supports importing modules from your private VCS repositories. The public Terraform Module Registry, on the other hand, publishes modules from public Git repositories and makes them available to any user of Terraform. References = : Private Registry - Terraform Cloud : Terraform Registry - Provider Documentation

NEW QUESTION # 119

You want to know from which paths Terraform is loading providers referenced in your Terraform configuration (* files). You need to enable additional logging messages to find this out. Which of the following would achieve this?

- A. Set the environment variable TF_LOG_PATH
- **B. Set the environment variable TF_LOG_TRACE**
- C. Set the environment variable TF_log_TRACE
- D. Set verbose for each provider in your Terraform configuration

Answer: B

Explanation:

Explanation

This will enable additional logging messages to find out from which paths Terraform is loading providers referenced in your Terraform configuration files, as it will set the log level to TRACE, which is the most verbose and detailed level.

NEW QUESTION # 120

.....

As you can find on our website, we have three versions of our Terraform-Associate-003 learning questions: the PDF, Software and APP online. The online test engine and window software need to run on computers. The PDF version of the Terraform-Associate-003 training engine is easy to make notes.
