CheckPoint Check Point Certified Maestro Expert - R81 (CCME) Sample Questions (Q79-Q84):

NEW QUESTION # 79 HealthCheck Point

- A. is a self-updatable suite of tools for SGMs with the capability to assess the health of the system, visualize the Firewall topology, provide a timeline of critical and informative events that might have occurred in a production system.
- B. is a self-updatable suite of tools for MHOs with the capability to assess the health of the system and provide a timeline of

critical and informative events that might have occurred in a production system.

- C. performs a system health check and is meant to replace both a CPInfo and the health check script.
- D. can be used to let you visualize the Firewall topology for the SG and view live statistics, which includes throughput, problem notes, and CPU utilization.

Answer: A

Explanation:

HealthCheck Point (HCP) is a tool that can perform various tests and checks on the system components of the Security Group Modules (SGMs), such as hardware, software, network, clock, ARP, and more. It can also display the performance statistics of the SGMs, such as throughput, packet rate, CPU utilization, memory usage, and more. Additionally, HCP can provide a graphical representation of the Firewall topology for the Security Group, showing the connections and statuses of the SGMs and the Orchestrators. Furthermore, HCP can generate a report of the critical and informative events that occurred on the system, such as configuration changes, errors, warnings, and alerts. HCP can help identify and troubleshoot any issues or errors that may affect the system functionality or performance.
