Cisco SD-WAN deployment must be troubleshooted using vManage APIs. A call to vEdge Hardware Health API returns the data in the exhibit (only a portion is shown). If this JSON is converted to a Python dictionary and assigned to the variable "d", how the status is accessed that is indicated on line 16?

- A. `d['data'][0]['statusList'][0]['status']`
- B. `d['data'][0]['statusList'][0]['status']`
- C. `d[data][0][statusList][0][status]`
- D. `d['data']['statusList']['status']`

Answer: A

The 0s in option AC and D are not logical in this scenario. The status tag already takes care of the error message.

NEW QUESTION # 26

Which two API calls must be issued to attach a device template in Cisco SD-WAN? (Choose two.)

- A. "monitor device action status" GET API request with the process ID to display the status of the attach action
- B. PUT call to initiate the attach action

- E. "monitor device action status" GET API request with the device ID to display the status of the attach action

Answer: A,C

To attach a device template in Cisco SD-WAN, you must issue a POST call to initiate the attach action. This is the first step in the process. After initiating the attach action, you need to monitor the status of the action.

For this, you issue a "monitor device action status" GET API request with the process ID. The process ID is used to track the status of the attach action until it is completed.
