How to Pass the 400-007 Exam: Best Preparation Tips & Dumps

The Cisco 400-007 exam is a crucial certification test for IT professionals looking to advance their networking careers. With its challenging questions and broad syllabus, proper preparation is essential to ensure success. One effective study strategy involves using **400-007 dumps**, which provide real exam questions and answers for better understanding. In this blog, we will explore the best ways to prepare for the exam, the role of dumps in your study plan, and tips to maximize your chances of passing.

Understanding the Cisco 400-007 Exam

The 400-007 exam is part of Cisco's certification pathway for network engineers, focusing on advanced networking concepts, including:

- Network design principles
- Network security

Valid Test 400-007 Preparation for Real Exam

The 400-007 Exam software's user-friendly interface is made to uproot potential problems. Once you will try the demo of 400-007 exam questions, you will be well- acquainted with the software and its related features. Also 400-007 exam comes with various self-assessment features like timed exam, randomization questions, and multiple questions types, test history and score etc. Which means it enables you to customize the question type and you may practice random questions in order to enhance your skills and expertise. You may keep attempting the same questions many a time also.

Cisco 400-007 Certification Exam is a highly sought-after certification in the IT industry, specifically for network design experts. Cisco Certified Design Expert (CCDE v3.0) Written Exam certification exam is designed to test the skills and knowledge of candidates in designing and implementing advanced network infrastructure solutions. The CCDE v3.0 certification is intended for those who have extensive experience in network design and architecture and are looking to validate their skills and knowledge.

Cisco Certified Design Expert (CCDE v3.0) Written Exam Sample Questions (Q77-Q82):

NEW QUESTION # 77

What advantage of placing the IS-IS layer 2 flooding domain boundary at the core Layer in a three-layer hierarchical network is true?

- A. It can be applied to any kind of topology
- **B. The Layer 2 domain is contained and more stable**
- C. It reduces the complexity of the Layer 1 domains
- D. The Layer 1 and Layer 2 domains can easily overlap

Answer: B

NEW QUESTION # 78

You are using iSCSI to transfer files between a 10 Gigabit Ethernet storage system and a 1 Gigabit Ethernet server. The performance is only approximately 700 Mbps and output drops are occurring on the server switch port. Which action will improve performance in a cost-effective manner?

- **A. Increase the queue to at least 1 GB**
- B. Enable the TCP Nagle algorithm on the receiver
- C. Use a WRED random drop policy
- D. Change the protocol to CIFS.

Answer: A

Explanation:

The performance degradation is caused by output queue drops on the 1 Gbps server port. Increasing the queue size allows more data to be buffered during transient congestion periods, preventing packet loss and retransmissions which significantly degrade iSCSI performance.

* iSCSI is sensitive to packet loss due to its reliance on TCP.

* Increasing the queue depth is a simple, cost-effective method to absorb bursts.

* Changing to CIFS (A) is irrelevant since CIFS would suffer similar TCP congestion.

* WRED (C) intentionally drops packets during congestion, which is undesirable here.

* Enabling TCP Nagle (D) would likely introduce latency and reduce throughput for large data transfers.

NEW QUESTION # 79

Company XYZ wants to redesign the Layer 2 part of their network and wants to use all available uplinks for increased performance. They also want to have end host reachability supporting conversational learning. However, due to design constraints, they cannot implement port-channel on the uplinks. Which other technique can be used to make sure the uplinks are in active/active state?

- **A. switch stack**
- B. MSTP
- C. LISP
- D. TRILL

Answer: A

NEW QUESTION # 80

A network security team uses a purpose-built tool to actively monitor the campus network, applications, and user activity. The team also analyzes enterprise telemetry data from IPFIX data records that are received from devices in the campus network. Which

action can be taken based on the augmented data?

- A. asset identification and grouping decisions
- B. adoption and improvement of threat-detection response
- C. integration with an incident response plan
- **D. reduction in time to detect and respond to threats**

Answer: D

NEW QUESTION # 81

A network security team observes phishing attacks on a user machine from a remote location. The organization has a policy of saving confidential data on two different systems using different types of authentication. What is the next step to control such events after the security team verifies all users in Zero Trust modeling?

- **A. Ensure trustworthiness of devices.**
- B. Enforce risk-based and adaptive access policies.
- C. Apply a context-based network access control policy for users.
- D. Assess real-time security health of devices.

Answer: A

NEW QUESTION # 82
