Jira Cloud Administrator certification is a valuable credential that demonstrates one's expertise in Jira Cloud administration and is recognized by Atlassian.

ATLASSIAN Jira Cloud Administrator Sample Questions (Q32-Q37):

NEW QUESTION # 32

Boris is reviewing his assigned issues. He wants to move them from the backlog into a planned sprint so he can work on them. Which two permissions does he need? (Choose two.)

- A. Manage Sprints
- B. Move Issues
- C. Work On Issues
- D. Assignable User
- E. Edit Issues
- F. Schedule Issues

Answer: E,F

Explanation:

To move issues from the backlog to a planned sprint in a Jira Software Cloud project, Boris needs permissions to modify the issue's sprint field and edit the issue itself. The two permissions required are Schedule Issues (Option B) and Edit Issues (Option D).

* Explanation of the Correct Answers:

* Schedule Issues (Option B):

* The Schedule Issues permission allows a user to add issues to a sprint, remove issues from a sprint, or move issues between sprints. This permission is necessary to move issues from the backlog (which is not part of a sprint) into a planned sprint.

* Exact Extract from Documentation:

Schedule Issues permission

The Schedule Issues permission allows users to:

* Add issues to a sprint.

* Remove issues from a sprint.

* Move issues between sprints or to the backlog. This permission is required to manage the sprint field in issues, such as moving an issue from the backlog to a planned sprint. Note: This permission is granted via the project's permission scheme. (Source: Atlassian Support Documentation, "Manage permissions in Jira Cloud")

* Why This Fits: Moving an issue to a planned sprint involves updating the Sprint field, which requires the Schedule Issues permission.

* Edit Issues (Option D):

* The Edit Issues permission allows a user to modify issue fields, including the Sprint field.

Without this permission, Boris cannot edit the issue to set its sprint, even if he has the Schedule Issues permission.

* Exact Extract from Documentation:

Edit Issues permission

The Edit Issues permission allows users to modify issue fields, such as Summary, Description, or Sprint. This permission is required to update an issue's details, including moving it to a sprint if combined with the Schedule Issues permission.

Note: This permission is granted via the project's permission scheme.

(Source: Atlassian Support Documentation, "Manage permissions in Jira Cloud")

* Why This Fits: Editing the Sprint field to move an issue into a planned sprint requires the Edit Issues permission, as it involves modifying the issue's metadata.

* Why Other Options Are Incorrect:

* Work On Issues (Option A):

* The Work On Issues permission allows users to log work on issues (e.g., record time spent). It is not related to moving issues to a sprint or editing issue fields.

* Extract from Documentation:

Work On Issues permission

Allows users to log work on issues using the time tracking feature. This does not include editing issue fields or managing sprints.

(Source: Atlassian Support Documentation, "Manage permissions in Jira Cloud")

* Move Issues (Option C):

* The Move Issues permission allows users to move issues between projects or change their issue type within the same project.

Moving an issue to a sprint does not involve changing its project or issue type, so this permission is not required.

* Extract from Documentation:

Move Issues permission

Allows users to move issues to a different project or change their issue type. This is not required for moving issues to a sprint within the same project.

(Source: Atlassian Support Documentation, "Manage permissions in Jira Cloud")

* Manage Sprints (Option E):

* The Manage Sprints permission allows users to create, start, complete, or delete sprints.

While this permission is necessary for managing the sprint itself, it is not required to move issues into a planned sprint, as Boris is not creating or modifying the sprint.

* Extract from Documentation:

Manage Sprints permission

Allows users to create, start, complete, or delete sprints. Moving issues to an existing sprint requires the Schedule Issues and Edit Issues permissions, not Manage Sprints.

(Source: Atlassian Support Documentation, "Manage permissions in Jira Cloud")

* Assignable User (Option F):

* The Assignable User permission allows a user to be assigned to issues (i.e., set as the Assignee). It does not affect the ability to move issues to a sprint.

* Extract from Documentation:

Assignable User permission

Allows users to be set as the assignee of an issue. This does not include editing other fields like the Sprint field.

(Source: Atlassian Support Documentation, "Manage permissions in Jira Cloud")

* Additional Notes:

* Boris likely already has the Browse Projects permission, as he can review his assigned issues. The Schedule Issues and Edit Issues permissions are specifically required for the action of moving issues to a sprint.

* These permissions are granted via the project's permission scheme, which can be checked in Project settings > Permissions.

NEW QUESTION # 33

Carlos describes his problem in the classic HR project

* He cannot attach files to issues of Request issue type when they are in the Approved status

* He can attach files to issues of Request issue type in any other status

* He can attach files to every other issue type in every status

He asks for your help in determining the root cause. Select the root cause (Choose one)

- A. There is a workflow condition configured
- B. The Attachment field is missing on the screen used by the Request issue type
- C. He is not a member of a security level
- D. He does not have the correct project permission
- E. There is a workflow step property configured

Answer: E

NEW QUESTION # 34

You have been asked to take on the administration of a second Jira installation in your company.

You were given the following information about user accounts:

- The company standard is to use Active Directory (AD) to provide user accounts.
- There are several Active Directory systems in use by different business units.
- The second Jira is not to be merged with your main Jira.
- The main Jira system is connected to Active Directory for user accounts.
- The second Jira is using internal user accounts, not Active Directory.
- People using the second Jira are using the same login ID as they would use in Active Directory.
- Your company would like to use Single Sign-on (SSO) but has not yet implemented it for either Jira system.

Which authentication method should you recommend?

- A. Change the new Jira to link directly to the required AD servers.
- B. Set up a Crowd server to pull in all the AD services, and plan to migrate internal users.
- C. Set up a Crowd server to get the user lists from all internal directories and AD, and use AD directly for the password checking.
- D. Change the new Jira to use your main Jira's directory services, as that is already reading your Active Directory services.

Answer: C

NEW QUESTION # 35

You needed to replace the legacy Jira group all-staff-europe with a newly created all-staff-global group. You created the new group and you migrated all users to the new group. Then you deleted the legacy group.

Which four problems might users report after the change? (Choose four.)

- A. Users are not able to log in to Jira anymore.
- B. Workflow transitions are hidden from certain users.
- C. Filter subscriptions send out errors instead of issues statistics.
- D. Comments that were restricted to the legacy group are lost.
- E. Users are not able to perform bulk change operations.
- F. Filter results return an incorrect number of issues.

Answer: B,D,E,F

NEW QUESTION # 36

Jan asked you to create a new Select List custom field called Department for his project MCAS. You created the field in the morning. In the afternoon, Jan notes that his Jira dashboard is not showing the field correctly. He asks to help him troubleshoot. View the Exhibit to see Jan's entire dashboard.

- The first gadget shows 26 issues in the project by Status.
- The second gadget shows that there are three issues that have the new Department field set.
- The last gadget shows "No Data Available". The filter query for that gadget is "project=MCAS and Department is empty."

Why does Jan's gadget say "No Data Available"?

- A. There is issue security on the issues.
- B. You created the field Department but did not re-index the MCAS project.
- C. The field context on the Department field was not set to allow empty values.
- D. The JQL query for the filter is not valid.
- E. The field is marked Optional in the Field Configuration.
- F. Jan does not have the proper Browse permissions.

Answer: C
