- B. To enable the system to automatically detect and resolve data inconsistencies
- **C. To review the functional scope as identified for the customer's solution**
- D. To automatically migrate legacy data to the development instance

Answer: C

Explanation:

The Starter system in SAP S/4HANA Cloud Public Edition is used during the Explore phase to demonstrate SAP Best Practices and validate the solution fit. Non-standard scope items may be activated to align with customer requirements.

* Option A: To review the functional scope as identified for the customer's solutionCorrect. Non- standard scope items are activated in the Starter system to allow customers to review and validate the functional scope that meets their specific needs.

* Option C: To enable the system to automatically detect and resolve data inconsistenciesIncorrect.

The Starter system is for process validation, not data consistency checks, which are handled during testing phases. TheSAP S/4HANA Cloud Testing Guidenotes, "Data consistency checks occur in the Test system, not the Starter system."

* Option D: To comply with SAP's licensing requirements for cloud implementationsIncorrect.
