C_CPI_2506 practice materials & C_CPI_2506 real test & C_CPI_2506 test prep

Our SAP C_CPI_2506 exam guide has not equivocal content that may confuse exam candidates. All question points of our SAP Certified Associate - Integration Developer C_CPI_2506 study quiz can dispel your doubts clearly. Get our SAP Certified Associate - Integration Developer C_CPI_2506 Certification actual exam and just make sure that you fully understand it and study every single question in it by heart.

SAP C_CPI_2506 Exam Syllabus Topics:

Topic	Details
Topic 1	• SAP Event Mesh: This section of the exam measures the skills of Solution Architects and centers on using SAP Event Mesh to support event-driven integration. It highlights the importance of asynchronous communication, event publishing, and subscription models, allowing organizations to build scalable and decoupled systems.
Topic 2	• Implementing Cloud Integration: This section of the exam measures the skills of Integration Consultants and examines how cloud integration flows are designed and deployed. It emphasizes creating integration scenarios, handling connectivity, and applying best practices to build efficient, secure, and reliable integration processes in SAP's cloud environment.
Topic 3	• SAP Integration Suite Overview: This section of the exam measures the skills of Integration Consultants and covers the foundational concepts of the SAP Integration Suite. It provides an understanding of the suite's capabilities, its role in connecting applications, and its relevance in modern cloud-based integration scenarios.

Topic 4	Managing APIs: This section of the exam measures the skills of Solution Architects and focuses on managing APIs within the SAP ecosystem. It covers topics such as API provisioning, lifecycle management, security policies, and monitoring, ensuring candidates can handle APIs effectively for enterprise integration needs.

SAP Certified Associate - Integration Developer Sample Questions (Q35-Q40):

NEW QUESTION # 35

Which SAP offering manages integrations across hybrid and multicloud environments?

- A. SAP Integration Suite manages integrations across hybrid and multicloud environments.
- B. SAP process Orchestration manages integrations across hybrid and multicloud environments.
- C. SAP Cloud Platform Integration manages integrations across hybrid and multicloud environments.
- D. SAP Business Technology Platform manages integrations across hybrid and multicloud environments.

Answer: A

Explanation:

SAP Integration Suite is the strategic integration platform-as-a-service (iPaaS) from SAP. It provides a comprehensive set of integration capabilities for hybrid and multicloud landscapes.

It connects on-premise SAP systems, cloud SAP solutions (e.g., S/4HANA Cloud, SuccessFactors, Ariba), and third-party applications.

It offers capabilities like Cloud Integration, API Management, Event Mesh, Open Connectors, and Integration Advisor to support various integration patterns.

SAP explicitly positions Integration Suite as the solution to manage end-to-end integrations across heterogeneous and distributed IT landscapes.

Other options:

SAP Cloud Platform Integration was the older name of Cloud Integration (now part of Integration Suite).

SAP Process Orchestration is the legacy on-premise middleware and not designed for multicloud/hybrid environments.

SAP BTP is the overall platform; integration is only one capability within it.

NEW QUESTION # 36

You want to publish a new API product to the API business hub enterprise. What is a requirement?

- A. At least two deployed API Providers
- B. At least two deployed API Proxies
- C. At least one deployed API Proxy
- D. At least one deployed API Provider

Answer: C

Explanation:

To publish a new API product to the API business hub enterprise, you need at least one deployed API proxy as a requirement. An API proxy is an API that acts as an intermediary between an API provider and an API consumer. It can be used to add security, monitoring, caching, transformation, and other features to the API provider. An API product is a bundle of one or more API proxies that are grouped together for a specific business scenario or use case. To create an API product, you need to select one or more deployed API proxies from your API portal and provide some metadata, such as name, title, description, quota limits, and so on. Then you can publish your API product to the API business hub enterprise, which is a centralized platform for discovering, consuming, and managing APIs. NEW QUESTION # 37

You use an APIKey for authentication in an HTTPS API call. In which part of the Content Modifier is the APIKey included?

- A. Message body
- B. Attachment

- C. Message header
- D. Exchange property

Answer: C

Explanation:

When using API Key authentication for HTTP(S) calls in SAP Integration Suite:

The API Key is typically included in the HTTP header (e.g., APIKey: <value> or x-api-key: <value>).

Message headers are configured in the Content Modifier for outbound requests.

Other options:

Attachment # Used for file handling, not authentication.

Message body # Contains payload, not credentials.

Exchange property # Used internally within the flow, not sent externally.

Thus, the API Key must be placed in the Message header.

NEW QUESTION # 38

You want to call an OData v4.0 interface through an adapter in the Cloud Integration capability within SAP Integration Suite. Which adapter can you use?

- A. HTTPS
- B. ProcessDirect
- C. JMS
- D. SOAP

Answer: A

Explanation:

You can use an HTTPS adapter to call an OData v4.0 interface in the Cloud Integration capability within SAP Integration Suite. An HTTPS adapter allows you to send and receive messages over HTTP or HTTPS protocols. You can use an HTTPS adapter to communicate with RESTful services, such as OData v4.0, that support HTTP methods and formats. Reference: Integration Software | SAP Integration Suite, Modernize Integration with SAP Integration Suite | openSAP

NEW QUESTION # 39

For which of the following scenarios can you use scripting in an integration flow?

- A. Create XSLT mapping artifacts.
- B. Add information to the message log.
- C. Configure an OData adapter.

Answer: B

Explanation:

In SAP Cloud Integration (part of Integration Suite), scripting (Groovy, JavaScript) is supported in integration flows to handle custom logic that cannot be achieved by standard adapters or mappings. Example use cases:

Enriching messages with dynamic values.

Adding custom log entries into the Message Processing Log.

Custom validation, conversions, or calculations.

Other options:

A). Create XSLT mapping artifacts # Achieved via XSLT, not scripting.

C). Configure an OData adapter # Done via adapter configuration, not scripting.

Thus, scripting is used for runtime logic enhancements like adding information to the message log.
