Reliable CDPSE Braindumps Free & CDPSE Latest Braindumps Questions

The Real4Prep is committed to acing the Certified Data Privacy Solutions Engineer (CDPSE) exam questions preparation quickly, simply, and smartly. To achieve this objective Real4Prep is offering valid, updated, and real ISACA CDPSE Exam Dumps in three high-in-demand formats. These Certified Data Privacy Solutions Engineer (CDPSE) exam questions formats are PDF dumps files, desktop practice test software, and web-based practice test software.

ISACA CDPSE (Certified Data Privacy Solutions Engineer) Exam is a certification offered by the Information Systems Audit and Control Association (ISACA) for professionals who specialize in data privacy solutions engineering. Certified Data Privacy Solutions Engineer certification is designed to validate the knowledge, skills, and experience of individuals who design, implement, and manage data privacy solutions for organizations. The CDPSE Certification program covers a wide range of topics, including data privacy laws and regulations, data privacy program management, and data security technologies and controls.

ISACA Certified Data Privacy Solutions Engineer Sample Questions (Q231-Q236):

NEW QUESTION # 231

Which of the following is an IT privacy practitioner's BEST recommendation to reduce privacy risk before an organization provides

personal data to a third party?

- A. Encryption
- **B. Anonymization**
- C. Aggregation
- D. Tokenization

Answer: B

NEW QUESTION # 232

An organization Wishes to deploy strong encryption to its most critical and sensitive databases. Which of the following is the BEST way to safeguard the encryption keys?

- **A. Ensure the keys are stored in a cryptographic vault.**
- B. Ensure the keys are stored in a remote server.
- C. Ensure key management responsibility is assigned to the privacy officer.
- D. Ensure all access to the keys is under dual control

Answer: A

Explanation:

Explanation

The best way to safeguard the encryption keys is to ensure that they are stored in a cryptographic vault. A cryptographic vault is a secure hardware or software module that provides cryptographic services and protects the keys from unauthorized access, modification, or disclosure. A cryptographic vault can also provide other functions, such as key generation, key backup, key rotation, key destruction, and key auditing. A cryptographic vault can enhance the security and privacy of the encrypted data by preventing key compromise, leakage, or misuse. A cryptographic vault can also comply with the security standards and best practices for key management, such as the ISO/IEC 27002, NIST SP 800-57, or PCI DSS. References:

NEW QUESTION # 233

Which of the following is a PRIMARY objective of performing a privacy impact assessment (PIA) prior to onboarding a new Software as a Service (SaaS) provider for a customer relationship management (CRM) system?

- A. To assess the risk associated with personal data usage
- B. To classify personal data according to the data classification scheme
- C. To determine the service provider's ability to maintain data protection controls
- **D. To identify controls to mitigate data privacy risks**

Answer: D

Explanation:

Explanation

A primary objective of performing a privacy impact assessment (PIA) prior to onboarding a new Software as a Service (SaaS) provider for a customer relationship management (CRM) system is to identify controls to mitigate data privacy risks, such as data breaches, unauthorized access, misuse or loss of data. A PIA would help to evaluate the potential privacy impacts of using a new SaaS provider for CRM data processing activities, such as collecting, storing, analyzing or transferring customer data, and to implement appropriate controls to mitigate those impacts, such as encryption, access control, backup, audit trail or contractual clauses. A PIA would also help to ensure compliance with privacy principles, laws and regulations, and alignment with customer expectations and preferences. The other options are not primary objectives of performing a PIA prior to onboarding a new SaaS provider for CRM data processing activities. Classifying personal data according to the data classification scheme is an activity that may be part of a PIA process, but it is not an objective in itself. Assessing the risk associated with personal data usage is an activity that may be part of a PIA process, but it is not an objective in itself. Determining the service provider's ability to maintain data protection controls is an activity that may be part of a PIA process, but it is not an objective in itself, p. 67 References: 1: CDPSE Review Manual (Digital Version)

NEW QUESTION # 234

Which of the following is the BEST indication of an effective records management program for personal data?

- A. All sensitive data has been tagged.
- **B. A retention schedule is in place.**
- C. The legal department has approved the retention policy.
- D. Archived data is used for future analytics.

Answer: B

NEW QUESTION # 235

What should be the PRIMARY consideration of a multinational organization deploying a user and entity behavior analytics (UEBA) tool to centralize the monitoring of anomalous employee behavior?

- **A. Cross-border data transfer**
- B. Support staff availability and skill set
- C. User notification
- D. Global public interest

Answer: A

Explanation:

The primary consideration of a multinational organization deploying a user and entity behavior analytics (UEBA) tool to centralize the monitoring of anomalous employee behavior is cross-border data transfer, because it may involve the transfer of personal data across different jurisdictions with different privacy laws and regulations. The organization needs to ensure that it complies with the applicable legal requirements and safeguards the privacy rights of its employees when transferring their data to a central location for analysis. The other options are secondary or operational considerations that may not have a significant impact on the privacy of the employees.
