Test CheckPoint 156-836 King & Braindumps 156-836 Downloads

What's more, part of that Free4Dump 156-836 dumps now are free: https://drive.google.com/open?id=1kVMvAV_sX-33lSxuF1nvMQ0_Z6VXhpPB

You will be able to assess your shortcomings and improve gradually without having anything to lose in the actual Check Point Certified Maestro Expert - R81 (CCME) exam. You will sit through mock exams and solve actual CheckPoint 156-836 dumps. In the end, you will get results that will improve each time you progress and grasp the concepts of your syllabus. The desktop-based CheckPoint 156-836 Practice Exam software is only compatible with Windows.

The CCME certification exam covers a wide range of topics, including Check Point Maestro architecture, deployment, and management, Maestro orchestration, and troubleshooting techniques. Candidates who pass the CCME certification exam demonstrate their expertise in Check Point Maestro architecture, deployment, and management. They also demonstrate their ability to troubleshoot complex security issues using Check Point Maestro. CCME certified professionals are highly valued by organizations that use Check Point Maestro for their network security orchestration.

Braindumps 156-836 Downloads - New 156-836 Test Sims

The clients can download our products and use our 156-836 study materials immediately after they pay successfully with their credit cards. Our system will send our 156-836 learning prep in the form of mails to the client in 5-10 minutes after their successful payment. The mails provide the links and if only the clients click on the links they can log in our software immediately to learn our 156-836 Guide materials. If there are something they can't understand, they can contact with our service and we will solve them right away.

Check Point Certified Maestro Expert (CCME) is the perfect certification program for professionals who want to validate their knowledge and expertise in the use of Check Point's Maestro technology. The CheckPoint 156-836 exam is designed to test your skills in deploying Check Point's Maestro technology in different environments, planning and designing a Maestro environment, tackling advanced management tasks, and troubleshooting Maestro systems.

CheckPoint 156-836 Certification Exam is a computer-based exam that consists of 90 multiple-choice questions. Candidates have 120 minutes to complete the exam, and the passing score is 70%. 156-836 exam is administered by Pearson VUE, a leading provider of computer-based testing services. Candidates can register for the exam online and select a testing center location that is convenient for them.

CheckPoint Check Point Certified Maestro Expert - R81 (CCME) Sample Questions (Q79-Q84):

NEW QUESTION # 79
What does the lldpctl command do?

- A. Show all devices discovered by LLDP protocol on downlink ports
- B. Discover orchestrators
- C. Show all devices discovered by LLDP protocol on uplink ports
- D. Show all devices discovered by LLDP protocol on all ports

Answer: D

Explanation:
Explanation
The lldpctl command is a tool to display information about the devices discovered by the Link Layer Discovery Protocol (LLDP) on all ports of the Maestro Orchestrator and the Security Group Members. LLDP is a protocol that enables devices to exchange information about their identity, capabilities, and configuration.
LLDP can help to discover the topology and connectivity of the Maestro environment.

NEW QUESTION # 80
What is the purpose of RJ-45 connectors located at the front panel of the Orchestrator MHO-170?

- A. Two Out-of-band interfaces for access to Orchestrator itself
- B. 1Gbps connectivity for Security Groups
- C. Out-of-band interface for access to Orchestrator itself and Serial Console connector
- D. Reserved for internal purposes. Not in use

Answer: C

Explanation:
The RJ-45 connectors located at the front panel of the Orchestrator MHO-170 are used for out-of-band management and serial console access. One of them is a 1Gbps RJ-45 port that provides an out-of-band interface for accessing the Orchestrator itself for configuration and management purposes. The other one is a RJ-45 serial console port that provides a command-line interface for initial setup and troubleshooting.

NEW QUESTION # 81
Which command do you use to find bottlenecks in the system that are affecting performance, even functionality in some cases?

- A. asg diag verify
- B. asg monitor
- C. asg perf -v
- D. asg stat -v

Answer: C

Explanation:
Explanation
The asg perf -v command is used to find bottlenecks in the system that are affecting performance, even functionality in some cases. The asg perf -v command displays the performance statistics of the Security Group Modules (SGMs) in the Security Group, such as throughput, packet rate, CPU utilization, memory usage, and more. The asg perf -v command also shows the distribution mode and the correction rate of each SGM, which can indicate potential issues with asymmetric routing or load balancing. The asg perf -v command can help identify which SGMs are overloaded, underutilized, or misconfigured, and provide insights for troubleshooting and optimization.

NEW QUESTION # 82

What type of license is required for an MHO?

- A. A license is needed for each attached SGM.
- B. The MHO does not require a license.
- C. The MHO requires a VSX license.
- D. The MHO requires a NGTP license.

Answer: B

Explanation:
Explanation
The MHO (Maestro Hyperscale Orchestrator) does not require a license by itself, but each SGM (Security Group Module) that is attached to the MHO needs a license. The license type depends on the features and blades that are enabled on the SGM. For example, if the SGM is running VSX, it needs a VSX license.

NEW QUESTION # 83

What command should be used for collecting diagnostic information about the orchestrator?

- A. cpview
- B. cpinfo
- C. asg perf -v
- D. orch_info

Answer: B

Explanation:
Explanation
The cpinfo command is a tool that collects diagnostic information about the orchestrator, such as hardware, software, network, configuration, and logs. The cpinfo command generates a file that can be sent to Check Point Support for analysis and troubleshooting. The cpinfo command can be run on the orchestrator's CLI or WebUI.
