## EMC Dell PowerStore Deploy 2023 Exam Sample Questions (Q63-Q68):

### NEW QUESTION # 63

What is the primary purpose of remote protection in PowerStore?

- A. Enhancing CPU performance
- B. Increasing local storage capacity
- C. Improving network connectivity
- D. **Replicating data to a remote site for disaster recovery**

**Answer: D**

### NEW QUESTION # 64

A customer must configure two PowerStore clusters with these requirements:

Two PowerStore T appliances in each cluster.

Configure file replication between the clusters.

What is the minimum number of management subnet IPs required in each cluster to complete the configuration on each site?

- A. 06 IPs on source and target
- **B. 07 IPs on source and target**
- C. 10 IPs on source and target
- D. 09 IPs on source and target

**Answer: B**

Explanation:

IP Address Requirements for PowerStore T Appliances

Management IP: Each PowerStore T appliance requires one management IP address for initial configuration and ongoing management.

Cluster IP: Each PowerStore cluster requires one cluster IP address for internal communication between the appliances within the cluster.

File Mobility Network (FMN) IPs: For file replication, each PowerStore cluster needs three FMN IP addresses. These are dedicated IPs used for replication traffic between clusters.

Calculating the Total Number of IPs

Since the scenario involves two PowerStore T appliances in each cluster, let's calculate the IP addresses needed per cluster:

2 appliances x 1 management IP per appliance = 2 management IPs

1 cluster IP

3 FMN IPs

Total:  $2 + 1 + 3 = 6$  IPs

However, there's a crucial detail:

Additional IP for File Replication: When configuring file replication, an additional IP address is required on the source cluster for the destination cluster to connect to. This is used for the replication relationship and communication.

Therefore, the final count is:

Source Cluster: 6 IPs + 1 additional IP = 7 IPs

Target Cluster: 6 IPs = 6 IPs

Since the question asks for the minimum number of IPs in each cluster to complete the configuration, the answer is 7 IPs.

Dell PowerStore Reference

PowerStore: Networking Guide for Storage Services: This guide provides detailed information about IP address requirements for different PowerStore configurations, including file replication. You can find the latest version on the Dell Support site.

PowerStore: Replication Technologies - Overview and Prerequisites: This document outlines the requirements for configuring replication, including the need for additional IP addresses for the File Mobility Network.

Link to PowerStore documentation: <https://infohub.delltechnologies.com/l/dell-powerstore-replication-technologies/overview-and-prerequisites-1/> Understanding these IP address requirements is crucial for proper network planning and configuration in PowerStore environments, especially when implementing features like file replication.
