If you want a promotion or leave your current job, you should consider achieving a professional certification like Salesforce Certified Data Architect (Data-Architect) exam.

Salesforce Certified Data Architect Sample Questions (Q26-Q31):

NEW QUESTION # 26

Universal Container has implemented Sales Cloud to manage patient and related health records. During a recent security audit of the system it was discovered that same standard and custom fields need to be encrypted. Which solution should a data architect recommend to encrypt existing fields?

- A. Use Apex Crypto Class to encrypt customer and standard fields.
- B. Implement classic encryption to encrypt custom and standard fields.
- C. Implement shield platform encryption to encrypt and standard fields
- D. Export data out of Salesforce and encrypt custom and standard fields.

Answer: C

NEW QUESTION # 27

Universal Containers (UC) management has identified a total of ten text fields on the Contact object as important to capture any changes made to these fields, such as who made the change, when they made the change, what is the old value, and what is the new value. UC needs to be able to report on these field data changes within Salesforce for the past 3 months. What are two approaches that will meet this requirement? Choose 2 answers

- A. Turn on field Contact object history tracking for these ten fields, then create reports on contact history.
- B. Write an Apex trigger on Contact after insert event and after update events and store the old values in another custom object.
- C. Create a workflow to evaluate the rule when a record is created and use field update actions to store previous values for these ten fields in ten new fields.
- D. Create a Contact report including these ten fields and Salesforce Id, then schedule the report to run once a day and send email to the admin.

Answer: A,B

NEW QUESTION # 28

Universal Containers uses Apex jobs to create leads in Salesforce. The business team has requested that lead creation failures should be reported to them.

Which option does Apex provide to report errors from this Apex job?

- A. Use AppExchange package to clean lead information before Apex job processes them.
- B. Use Apex services to email failures to business when error occurs.
- C. Save Apex errors in a custom object, and allow access to this object for reporting.
- D. Use Custom Object to store leads, and allow unprocessed leads to be reported.

Answer: B

NEW QUESTION # 29

A Salesforce customer has plenty of data storage. Sales Reps are complaining that searches are bringing back old records that aren't relevant any longer. Sales Managers need the data for their historical reporting. What strategy should a data architect use to ensure a better user experience for the Sales Reps?

- A. Use Batch Apex to archive old data on a rolling nightly basis.
- B. Create a Permission Set to hide old data from Sales Reps.
- C. Archive and purge old data from Salesforce on a monthly basis.
- D. Set data access to Private to hide old data from Sales Reps.

Answer: C

Explanation:

Archiving and purging old data from Salesforce on a monthly basis is a good strategy to improve the user experience for the Sales Reps, as it will reduce the clutter and improve the search performance. Creating a permission set or setting data access to private are not effective ways to hide old data from Sales Reps, as they will still consume data storage and affect search results. Using Batch Apex to archive old data on a rolling nightly basis is also not a good option, as it will consume API requests and processing time, and may not comply with the data retention policy.

NEW QUESTION # 30

Universal Containers has a custom object with millions of rows of data.

When executing SOQL queries, which three options prevent a query from being selective? (Choose three.)

- A. Using NOT and != operators.
- B. Using trailing % wildcards.
- C. Using a custom index on a deterministic formula field.
- D. Using leading % wildcards.
- E. Performing large loads and deletions.

Answer: A,C,D

NEW QUESTION # 31

.....

With the rapid development of economy, the demand of society for us is getting higher and higher. If you can have an international certification, then you will be more competitive in society. Our Data-Architect exam materials have helped many people improve their competitive in their company or when they are looking for better jobs. Because our Data-Architect Practice Questions are all the most advanced information and knowledge to equip you up as the most skilled person. Besides, you can get the certification as well.
