

Test Development-Lifecycle-and-Deployment-Architect Quiz - Valid Test Development-Lifecycle-and-Deployment-Architect Braindumps

P.S. Free & New Development-Lifecycle-and-Deployment-Architect dumps are available on Google Drive shared by PrepPDF: https://drive.google.com/open?id=1V5yB6bfd56OoTc1OLs4ulYysPyy_sj3q

If you fail Development-Lifecycle-and-Deployment-Architect exam unluckily, don't worry about it, because we provide full refund for everyone who failed the exam. You can ask for a full refund once you show us your unqualified transcript to our staff. The whole process is time-saving and brief, which would help you pass the next Development-Lifecycle-and-Deployment-Architect Exam successfully. Please contact us through email when you need us. The Development-Lifecycle-and-Deployment-Architect question dumps produced by our company, is helpful for our customers to pass their exams and get the Development-Lifecycle-and-Deployment-Architect certification within several days. Our Development-Lifecycle-and-Deployment-Architect exam questions are your best choice.

To become a Salesforce Development-Lifecycle-and-Deployment-Architect Certified professional, candidates should have a deep understanding of the Salesforce platform and should have hands-on experience in developing and deploying applications. They should have expertise in various areas such as Apex, Visualforce, Salesforce APIs, and other development tools. Candidates should also have experience in architecting and designing solutions that meet business requirements and are scalable and maintainable.

Salesforce Development-Lifecycle-and-Deployment-Architect Online Practice Test (Salesforce-Development-Lifecycle-and-Deployment-Architect-Practice-Test)

This time set your mind at rest with the help of our Development-Lifecycle-and-Deployment-Architect guide quiz. You are free from any loss but focus on your success of the exam firmly this time. If you choose our nearly perfect Development-Lifecycle-and-

Deployment-Architect practice materials with high quality and accuracy, our Development-Lifecycle-and-Deployment-Architect Training Questions can enhance the prospects of victory. Choosing our Development-Lifecycle-and-Deployment-Architect learning prep is the most useful way to improve your grade and chance to pass the exam.

Salesforce Certified Development Lifecycle and Deployment Architect Exam is a comprehensive certification exam that assesses a candidate's proficiency in developing and deploying secure, scalable, and efficient Salesforce solutions. Salesforce Certified Development Lifecycle and Deployment Architect certification is designed for experienced Salesforce professionals who have a deep understanding of the Salesforce platform and its development lifecycle. It is one of the most prestigious and sought-after certifications in the Salesforce ecosystem.

Salesforce Development-Lifecycle-and-Deployment-Architect Certification Exam is intended for professionals who are responsible for managing the development lifecycle and deployment of Salesforce applications. This includes architects, developers, project managers, and others who are involved in the process of designing, building, and deploying Salesforce applications. Salesforce Certified Development Lifecycle and Deployment Architect certification exam is designed to validate the candidate's ability to design and implement complex solutions that meet the business requirements of their clients.

Salesforce Certified Development Lifecycle and Deployment Architect Sample Questions (Q169-Q174):

NEW QUESTION # 169

Which two project situations favor a waterfall methodology? Choose 2 answers

- **A. An application with regulatory compliance requirements to be validated by outside agencies.**
- B. An in-house application with a fixed team size, but an open timeline and flexible requirements.
- C. An application in post-production, with incremental changes made by a small team.
- **D. An application with many systems and inter-dependencies between components.**

Answer: A,D

Explanation:

An application with many systems and inter-dependencies between components is a project situation that favors a waterfall methodology, as it requires a high level of planning and design upfront to ensure the integration and compatibility of the components. An application with regulatory compliance requirements to be validated by outside agencies is also a project situation that favors a waterfall methodology, as it requires a clear and detailed documentation of the requirements and specifications, as well as a formal and rigorous testing and validation process. An application in post-production, with incremental changes made by a small team is a project situation that favors an agile methodology, as it allows for faster and more frequent delivery of changes, as well as more flexibility and collaboration. An in-house application with a fixed team size, but an open timeline and flexible requirements is also a project situation that favors an agile methodology, as it allows for more creativity and experimentation, as well as more feedback and adaptation.

NEW QUESTION # 170

Universal Containers (UC) had added a Service team to the Salesforce Platform. The Service team would like to have a few dozen of the service centers entered into the system as technical reference data. The service centers are made searchable in many different web forms and rather independent from all other business entities. In the past, they had to manually add any new service centers in each sandbox in the code migration path, they would like to eliminate the manual work if it is possible.

What is an optimal way to accomplish this requirement?

- A. Add the service centers to a hierarchical custom settings.
- **B. Add all of the service centers to a custom metadata type.**
- C. Define a brand-new custom object with a picklist field to host all of the service centers.
- D. Add the service centers to a list custom settings.

Answer: B

Explanation:

Explanation

The optimal way to store the service centers as technical reference data is to add them to a custom metadata type. Custom metadata types allow you to create, update, and deploy records that are defined by a custom object. Custom metadata types are similar to list custom settings, but they have some advantages, such as being deployable, queryable, and packageable. Hierarchical custom settings are not suitable for storing multiple records of the same type, and defining a new custom object with a picklist field is

unnecessary and inefficient.

NEW QUESTION # 171

What is the responsibility of an executive sponsor on a project?

- A. Determine project methodology
- B. Design executive dashboards
- C. Communicate project status
- **D. Approve changes to project scope**

Answer: D

Explanation:

This is the correct answer because the executive sponsor is the senior leader who provides strategic direction, funding, and support for the project. The executive sponsor is also responsible for approving any changes to the project scope, budget, or timeline that may affect the project outcomes or benefits.

NEW QUESTION # 172

All AppExchange products are subject to Salesforce security reviews.

What is the most common reason that the prospect AppExchange products fail the security review?

- **A. Cross-site scripting**
- B. SOQL injection
- C. CRUD/FLS (field level security)
- D. Session hacking

Answer: A

Explanation:

Cross-site scripting is the most common reason that the prospect AppExchange products fail the security review. Cross-site scripting (XSS) is a type of web application vulnerability that allows an attacker to inject malicious code into a web page that is viewed by other users. XSS can compromise the security and privacy of the users, as well as the functionality and performance of the application. Salesforce has strict security standards and policies for AppExchange products, and any product that has XSS vulnerabilities will not pass the security review. CRUD/FLS, session hacking, and SOQL injection are also security issues that can affect AppExchange products, but they are not as common or severe as XSS.

NEW QUESTION # 173

Universal Containers has an active production org, and they are planning to release some new features to it next month. The team is working to prepare .1 deployment plan and reached out to the technical architect for inputs on rollback strategy.

What should a technical architect recommend?

- A. Backup the existing metadata using ANT Migration Tool. To roll back deployment, manually delete new components and deploy again to production using backed up metadata.
- B. Create a sandbox from production to take the backup of existing metadata. To roll back deployment, manually delete new components and then deploy again to production using metadata from this sandbox.
- **C. Create a sandbox from production to take the backup of existing metadata. To roll back deployment, use destructivechanges.xml to delete new components and then deploy again to production using metadata from this sandbox.**
- D. Backup the existing metadata using the ANT Migration Tool. To roll back deployment, deploy again to production using backed up metadata.

Answer: C
