High-quality Amazon - Test DOP-C01 Dumps

Our company constantly increases the capital investment on the research and innovation of our DOP-C01 study materials and expands the influences of our study materials in the domestic and international market. Because the high quality and passing rate of our DOP-C01 study materials more than 90 percent that clients choose to buy our study materials when they prepare for the test DOP-C01 Certification. We have established a good reputation among the industry and the constantly-enlarged client base. Our

sales volume and income are constantly increasing and the clients' credibility towards our DOP-C01 study materials stay high.

To be eligible for the Amazon DOP-C01 Exam, the candidate must have at least two years of experience in a DevOps role on the AWS platform. The candidate should also have a solid understanding of programming and scripting languages, such as Python, Ruby, or Java, and experience with DevOps tools, such as Jenkins, Git, and Docker. Additionally, the candidate should have a strong understanding of cloud computing concepts and be familiar with the AWS platform's various services and features.

The Amazon DOP-C01 exam covers a wide range of topics, including continuous delivery and deployment, infrastructure as code, monitoring and logging, security and compliance, and troubleshooting. Candidates must demonstrate their knowledge of AWS services such as AWS CloudFormation, AWS Elastic Beanstalk, AWS CodeDeploy, AWS CodePipeline, AWS OpsWorks, and AWS Lambda, as well as their ability to use tools such as Jenkins, Git, and Docker to automate and streamline the DevOps process. Passing the AWS Certified DevOps Engineer - Professional exam is a significant achievement for any DevOps professional, as it demonstrates their proficiency in building and managing scalable, highly available, and fault-tolerant systems on AWS.

Amazon AWS Certified DevOps Engineer - Professional Sample Questions (Q240-Q245):

NEW QUESTION # 240

You have defined a Linux based instance stack in Opswork. You now want to attach a database to the Opswork stack. Which of the below is an important step to ensure that the application on the Linux instances can communicate with the database

- A. Add the appropriate driver packages to ensure the application can work with the database
 - B. Add the appropriate driver packages to ensure the application can work with the database
 - C. Add another stack with the database layer and attach it to the application stack.
 - D. Configure SSL so that the instance can communicate with the database
 - E. Configure database tags for the Opswork application layer
 - F. Configure SSL so that the instance can communicate with the database
 - G. Add another stack with the database layer and attach it to the application stack.
 - H. Configure database tags for the
- You have defined a Linux based instance stack in Opswork. You now want to attach a database to the Opswork stack. Which of the below is an important step to ensure that the application on the Linux instances can communicate with the database

Answer: A

Explanation:

Explanation

The AWS documentation mentions the below point

Important

For Linux stacks, if you want to associate an Amazon RDS service layer with your app, you must add the appropriate driver package to the associated app server layer, as follows:

1. Click Layers in the navigation pane and open the app server's Recipes tab.
2. Click Edit and add the appropriate driver package to OS Packages. For example, you should specify mysql if the layer contains Amazon Linux instances and mysql-client if the layer contains Ubuntu instances.
3. Save the changes and redeploy the app.

For

more information on Opswork app connectivity, please visit the below URL: <http://docs.aws.amazon.com/opsworks/latest/userguide/workingapps-connectdb.html>

NEW QUESTION # 241

A DevOps Engineer manages a web application that runs on Amazon EC2 instances behind an Application Load Balancer (ALB). The instances run in an EC2 Auto Scaling group across multiple Availability Zones. The Engineer needs to implement a deployment strategy that:

- * Launches a second fleet of instances with the same capacity as the original fleet.
- * Maintains the original fleet unchanged while the second fleet is launched.
- * Transitions traffic to the second fleet when the second fleet is fully deployed.
- * Terminates the original fleet automatically 1 hour after transition.

Which solution will satisfy these requirements?

- A. Use an AWS CloudFormation template with a retention policy for the ALB set to 1 hour. Update the Amazon Route 53 record to reflect the new ALB.
- **B. Use two AWS Elastic Beanstalk environments to perform a blue/green deployment from the original environment to the new one. Create an application version lifecycle policy to terminate the original environment in 1 hour.**
- C. Use AWS Elastic Beanstalk with the configuration set to Immutable. Create an .ebextension using the Resources key that sets the deletion policy of the ALB to 1 hour, and deploy the application.
- D. Use AWS CodeDeploy with a deployment group configured with a blue/green deployment configuration. Select the option Terminate the original instances in the deployment group with a waiting period of 1 hour.

Answer: B

NEW QUESTION # 242

What is server immutability?

- A. The inability to change server counts.
- B. Updating a server after creation.
- C. The ability to change server counts.
- **D. Not updating a server after creation.**

Answer: D

Explanation:

... disposable upgrades offer a simpler way to know if your application has unknown dependencies. The underlying EC2 instance usage is considered temporary or ephemeral in nature for the period of deployment until the current release is active. During the new release, a new set of EC2 instances are rolled out by terminating older instances. This type of upgrade technique is more common in an immutable infrastructure.

NEW QUESTION # 243

A company is deploying a container-based application using AWS CodeBuild. The security team mandates that all containers are scanned for vulnerabilities prior to deployment using a password-protected endpoint. All sensitive information must be stored securely.

Which solution should be used to meet these requirements?

- A. Encrypt the password using AWS KMS. Store the encrypted password in the buildspec.yml file as an environment variable under the variables mapping. Reference the environment variable to initiate scanning.
- B. Use the AWS Encryption SDK to encrypt the password and embed in the buildspec.yml file as a variable under the secrets mapping. Attach a policy to CodeBuild to enable access to the required decryption key.
- C. Import the password into an AWS CloudHSM key. Reference the CloudHSM key in the buildspec.yml file as an environment variable under the variables mapping. Reference the environment variable to initiate scanning.
- **D. Store the password in the AWS Systems Manager Parameter Store as a secure string. Add the Parameter Store key to the buildspec.yml file as an environment variable under the parameter-store mapping. Reference the environment variable to initiate scanning.**

Answer: D

NEW QUESTION # 244

When using Amazon SQS how much data can you store in a message?

- A. 4 KB
- **B. 8 KB**
- C. 2 KB
- D. 16 KB

Answer: B

Explanation:

With Amazon SQS version 2008-01-01, the maximum message size for both SOAP and Query requests is 8KB.

If you need to send messages to the queue that are larger than 8 KB, AWS recommends that you split the information into separate messages. Alternatively, you could use Amazon S3 or Amazon SimpleDB to hold the information and include the pointer to that information in the Amazon SQS message. If you send a message that is larger than 8KB to the queue, you will receive a MessageTooLong error with HTTP code 400.

NEW QUESTION # 245

.....

The Amazon DOP-C01 certification exam helps you in getting jobs easily. Actual4dump offers real DOP-C01 exam questions so that the students can prepare in a short time and crack the DOP-C01 exam with ease. These DOP-C01 Exam Questions are collected by professionals by working hard for days and nights so that the customers can pass DOP-C01 certification exam with good scores.
