SAP E-S4CPE-2405 Exam Syllabus Topics:

Topic	Details
Topic 1	Implementing with a Cloud Mindset, Building the Team, and Conducting Fit-to-Standard Workshops: This section of the exam measures skills of project managers and emphasizes the importance of adopting a cloud-first approach when implementing SAP solutions. It also includes building the right implementation team and running fit-to-standard workshops to align system configuration with best practices and standard business processes.

Topic 2	• Configuration and the SAP Fiori Launchpad: This section of the exam measures skills of application consultants and covers configuring SAP solutions to meet business needs, along with setting up and managing the SAP Fiori Launchpad. It also touches on customizing the user interface for an optimal and user-friendly experience.
Topic 3	• System Landscapes and Identity Access Management: This section of the exam measures skills of system administrators and focuses on designing and managing SAP system landscapes while ensuring secure and efficient identity access management. It includes concepts related to system environments, user authentication, and authorization controls.
Topic 4	• Introduction to Cloud Computing and SAP Cloud ERP Deployment Options: This section of the exam measures skills of cloud solution architects and focuses on the fundamentals of cloud computing, along with the different deployment models available for SAP Cloud ERP. It addresses the benefits, challenges, and selection criteria for choosing the most suitable deployment option in alignment with business goals.

SAP Certified Specialist - Implementation Consultant - SAP S/4HANA Cloud Private Edition Sample Questions (Q56-Q61):

NEW QUESTION # 56

How are SAP Best Practices business processes activated in the SAP S/4HANA Cloud Private Edition production system?

- A. Through transports
- B. Through the SAP GUI
- C. Through SAP Solution Builder
- D. Through SAP Signavio Process Navigator

Answer: C

Explanation:

In SAP S/4HANA Cloud Private Edition, SAP Best Practices business processes are activated in the production system using the following tool:

Option A: SAP Signavio Process Navigator

This option is incorrect. SAP Signavio Process Navigator is used for process modeling and analysis, not for activating business processes in the production system.

Option B: Through transports

This option is incorrect. While transports are used to move configurations between systems, the activation of SAP Best Practices content is managed by a specific tool.

Option C: Through the SAP GUI

This option is incorrect. The SAP GUI is an interface for accessing SAP systems but does not directly handle the activation of Best Practices content.

Option D: SAP Solution Builder

This option is correct. SAP Solution Builder is utilized to activate SAP Best Practices content in the production system, ensuring that predefined business processes are correctly implemented.

Therefore, the activation of SAP Best Practices business processes in the SAP S/4HANA Cloud Private Edition production system is performed using SAP Solution Builder.

NEW QUESTION # 57

Where is the initial list of known integrations documented?

- A. In the Digital Discovery Assessment
- B. In the SAP Integration Solution Advisory Methodology
- C. In the Business Driven Configuration Questionnaire
- D. In SAP Cloud ALM

Answer: A

Explanation:

The initial list of known integrations is documented in the Digital Discovery Assessment. This assessment captures existing integration

points with other systems, which is crucial for seamless data flow and process efficiency. Documenting these requirements helps in planning and executing necessary integrations during implementation.

Option A: In the Business Driven Configuration Questionnaire

This option is incorrect. The Business Driven Configuration Questionnaire focuses on gathering business process requirements and configurations, not specifically on integration points.

Option C: In SAP Cloud ALM

This option is incorrect. SAP Cloud ALM is a tool for application lifecycle management and may document integration requirements during project execution, but it is not the initial source for capturing known integrations.

Option D: In the SAP Integration Solution Advisory Methodology

This option is incorrect. The SAP Integration Solution Advisory Methodology provides guidance on designing and implementing integration strategies but does not serve as the initial documentation for known integrations.

In summary, the Digital Discovery Assessment is the primary document where the initial list of known integrations is captured, ensuring that integration requirements are identified early in the project.

NEW QUESTION # 58

When is a customer required to upgrade their SAP S/4HANA Cloud Private Edition system?

- A. When the base release falls out of mainstream maintenance
- B. When the current base release has only 12 months of mainstream maintenance remaining
- C. When two support packs have been released for the current base release
- D. When the latest base release is launched

Answer: A

Explanation:

SAP S/4HANA Cloud, private edition, follows a structured release and maintenance schedule. Customers are required to upgrade their systems when the current base release reaches the end of its mainstream maintenance period.

Option A: When the latest base release is launched

This option is incorrect. Customers are not mandated to upgrade immediately upon the release of a new base version.

Option B: When the base release falls out of mainstream maintenance

This option is correct. To ensure continued support and compliance, customers must upgrade when their current release exits mainstream maintenance.

Option C: When the current base release has only 12 months of mainstream maintenance remaining This option is incorrect. While planning should commence as maintenance end approaches, an upgrade is not compulsory at the 12-month mark.

Option D: When two support packs have been released for the current base release This option is incorrect. The release of support packs does not dictate mandatory upgrade timelines.

Therefore, customers are required to upgrade their SAP S/4HANA Cloud, private edition systems when the base release falls out of mainstream maintenance.

NEW QUESTION # 59

How should an implementation consultant customize SAP Best Practices business processes?

- A. Use SAP Signavio Process Manager to edit the process
- B. Make edits to the original process
- C. Make a copy of the original process and edit the copy
- D. Use SAP Cloud ALM to edit the process

Answer: C

Explanation:

When customizing SAP Best Practices business processes in SAP S/4HANA Cloud Private Edition, the recommended approach is:

Option A: Make edits to the original process

This option is not recommended, as modifying the original process can lead to issues during system updates and upgrades.

Option B: Use SAP Cloud ALM to edit the process

This option is incorrect. SAP Cloud ALM is used for application lifecycle management and does not provide direct editing capabilities for business processes.

Option C: Make a copy of the original process and edit the copy

This option is correct. Creating a copy of the original process and then editing it ensures that the standard processes remain intact, allowing for easier maintenance and upgrades.

Option D: Use SAP Signavio Process Manager to edit the process

This option is incorrect. While SAP Signavio Process Manager is used for process modeling, it is not the tool for customizing SAP Best Practices business processes within the system.

In summary, to customize SAP Best Practices business processes, it is advisable to make a copy of the original process and edit the copy, preserving the integrity of the standard processes.

NEW QUESTION # 60

Which of the following are key-user in-app extensions that can be completed in SAP S/4HANA Cloud Private Edition? Note: There are 2 correct answers to this question.

- A. Create a custom object with the Business Object Processing Framework (BOPF).
- **B. Define a custom table in the SAP Fiori app "Custom Business Objects."**
- C. Define a core data services (CDS) view with the ABAP development tools for Eclipse.
- **D. Create a custom application UI with UI adaptation at runtime.**

Answer: B,D

NEW QUESTION # 61
