WGU Ethics In Technology QCO1 Sample Questions (Q36-Q41):

NEW QUESTION # 36

A company struggles to maintain project schedules with its current resource capacity. With a new set of corporate goals and restrictions on full-time hires, the company is considering adding contingent workers to help fill the gap.

What is a disadvantage of using contingent workers to support the company's goals?

- A. The company does not have to provide benefits throughout the project's lifecycle.
- **B. Internal business process understanding will be minimal given the temporary nature of the workers.**
- C. The company may require the same worker for other projects.
- D. Any skills gained during employment will be lost to the company at the project's completion.

Answer: B

Explanation:

Contingent workers (temporary employees, contractors, or freelancers) can help fill workforce gaps, but they lack deep familiarity with internal business processes, which can be a disadvantage.

Why Internal Business Process Understanding is a Concern?

- * Contingent workers are not deeply integrated into company culture, workflows, and long-term strategies.
- * They require time to adapt to internal systems, which can slow productivity initially.
- * Unlike full-time employees, they may not retain or transfer institutional knowledge to future projects.
- * A. Any skills gained during employment will be lost to the company at the project's completion. - While true, documentation and knowledge-sharing can mitigate this loss.
- * C. The company may require the same worker for other projects. - This is a potential benefit, not a disadvantage.
- * D. The company does not have to provide benefits throughout the project's lifecycle. - This is an advantage, not a disadvantage.

Why Not the Other Options? Thus, the correct answer is B. Internal business process understanding will be minimal given the temporary nature of the workers.

* Harvard Business Review (2022). Managing Contingent Workers Effectively.

* Kalleberg, A. L. (2000). Nonstandard Employment Relations: Part-time, Temporary, and Contract Work.

NEW QUESTION # 37

A group of hackers manipulated data to disable the national energy infrastructure for its political goals. Which type of attack did the group employ?

- A. Trojan horse
- B. Cyberespionage
- C. Advanced persistent threat
- **D. Cyberterrorism**

Answer: D

Explanation:

Cyberterrorism refers to the use of digital attacks to cause significant harm to critical infrastructure, government systems, or the public for political, ideological, or religious reasons. In this case, hackers manipulated data to disable a national energy infrastructure, which classifies as cyberterrorism since it causes disruption with potentially life-threatening consequences.

Unlike cyberespionage (spying for intelligence gathering) or an advanced persistent threat (APT, which is typically long-term data theft), cyberterrorism aims to instill fear, cause disruption, and further political agendas.

* Cybersecurity Ethics & National Security - Protecting critical infrastructure from malicious attacks is an ethical obligation under cybersecurity policies.

* Computer Fraud and Abuse Act (CFAA, 1986) - Criminalizes hacking attempts against government and national infrastructure.
* Utilitarian Ethics (Greatest Harm Principle) - Cyberterrorism has no ethical justification due to its potential harm to innocent civilians.
* ACM & IEEE Ethical Standards - Encourage responsible cybersecurity practices to prevent malicious attacks on infrastructure.
Relevant Ethical References in Technology: Thus, the correct answer is B. Cyberterrorism, as the attack targets national infrastructure for political goals.

NEW QUESTION # 38

A data scientist selects publicly available demographic data from a limited group of familiar zip codes when training an algorithm. What are two ethical concerns with this approach? Choose 2 answers.

- A. Privacy violation
- B. Small sample size
- C. Proxy discrimination
- D. Predictive coding

Answer: B,C

NEW QUESTION # 39

An organization is concerned about its cybersecurity after identifying unauthorized records in its payroll database. The organization hires a consultant to test its cyberdefenses. The consultant executes several test attacks on the organization's software and successfully demonstrates that by using Structured Query Language (SQL) injection, the consultant can add rows to the payroll database without obtaining the proper permissions.

Which hacker classification does the consultant fall under?

- A. Cybercriminal
- B. Cyberterrorist
- C. White hat hacker
- D. Black hat hacker

Answer: C

Explanation:

The consultant was hired by the organization to test its cybersecurity and identify vulnerabilities. This is the role of a white hat hacker, also known as an ethical hacker.

Why White Hat Hacker?

- * White hat hackers conduct security assessments legally and ethically to help organizations strengthen their cyber defenses.
- * The consultant demonstrated SQL injection attacks in a controlled manner to expose weaknesses without malicious intent.
- * Ethical hacking is a recognized practice under cybersecurity frameworks like NIST and ISO 27001.
- * A. Cybercriminal - Engages in illegal hacking for personal or financial gain, whereas the consultant was hired to help the organization.
- * C. Cyberterrorist - Motivated by political or ideological goals, not cybersecurity testing.
- * D. Black Hat Hacker - Malicious hackers who exploit vulnerabilities for personal benefit, unlike ethical hackers.

Why Not the Other Options? Thus, the correct answer is B. White Hat Hacker, as the consultant was conducting authorized penetration testing.

* CEH (Certified Ethical Hacker) Guidelines.

* National Institute of Standards and Technology (NIST) Cybersecurity Framework.

* OWASP Top Ten Security Risks (2023).
