FCP_ZCS-AD-7.4 Study Braindumps Make You Pass FCP_ZCS-AD-7.4 Exam Fluently - Prep4cram

Prep4cram presents FCP_ZCS-AD-7.4 exam questions in a convenient PDF format for effective preparation for the FCP - Azure Cloud Security 7.4 Administrator (FCP_ZCS-AD-7.4) exam. Fortinet FCP_ZCS-AD-7.4 exam questions PDF file is designed for easy comprehension, allowing you to download it onto various smart devices. Whether you possess a PC, laptop, Mac, tablet, or smartphone, accessing your FCP_ZCS-AD-7.4 Practice Exam Questions PDF anytime and anywhere is effortless.

Fortinet FCP - Azure Cloud Security 7.4 Administrator Sample Questions (Q11-Q16):

NEW QUESTION # 11

You want to take advantage of Azure availability zones for your cloud-based Fortinet deployment. Which two benefits do Azure availability zones provide? (Choose two.)

- A. Improve database performance and reliability
- B. Protect applications and data across multiple Azure regions
- C. Enhanced protection for application and data in a single Azure region
- D. Protect applications and data through high availability with fault isolation and redundancy

Answer: C,D

Explanation:

Enhanced protection for application and data in a single Azure region - Availability Zones provide physical separation of infrastructure within a single Azure region, protecting against datacenter-level failures.

Protect applications and data through high availability with fault isolation and redundancy - They offer fault isolation and redundancy, enabling high availability for applications and services by distributing them across multiple zones within the same region.

NEW QUESTION # 12

In Microsoft Entra ID, what is the primary administrative unit that represents an organization and its relationship with Microsoft's cloud services?

- A. Microsoft Entra organization
- **B. Microsoft Entra tenant**
- C. Microsoft Entra domain
- D. Microsoft Entra subscription

Answer: B

Explanation:

A Microsoft Entra tenant is the primary administrative unit that represents an organization within Microsoft's identity platform. It defines the boundary for identity management, access control, and resource governance, and serves as the core entity that connects the organization to Microsoft's cloud services such as Azure and Microsoft 365.

NEW QUESTION # 13

Refer to the exhibits.

```

FortiGate sniffer output

```
FGTlab-FGT-A # diagnose sniffer packet any 'port 22' 4
Using Original Sniffing Mode
interfaces=[any]
filters=[port 22]
^C
0 packets received by filter
0 packets dropped by kernel

FGTlab-FGT-A #
FGTlab-FGT-A #
FGTlab-FGT-A #
FGTlab-FGT-A #
```

A high availability (HA) active-active FortiGate with Elastic Load Balancing (ELB) and Internal Load Balancing (ILB) was deployed with a default setup to filter traffic to a Linux server running Apache server.

Ports 80 and 22 are open on the Linux server, and on FortiGate a VIP and firewall policy are configured to allow traffic through ports 80 and 22. Traffic on port 80 is successful, but traffic on port 22 is not detected by FortiGate.

What configuration changes could you perform to allow SSH traffic?

- A. Include the Linux server in the back-end pool options
- B. Configure a customized port under the Frontend IP configuration
- C. Add a new Inbound NAT rule
- D. Add a new Azure load balancing rule

Answer: C

Explanation:

Since port 80 traffic is reaching the FortiGate (as shown in the sniffer output) but port 22 traffic is not, the issue lies before the FortiGate, at the Azure Load Balancer level. Azure Load Balancers require an Inbound NAT rule to forward specific ports (like SSH on port 22) to a specific backend VM. Creating a new Inbound NAT rule for port 22 will allow SSH traffic to be properly routed to the FortiGate VM.

NEW QUESTION # 14

In the context of Azure Route Server, what is a primary function of the route server subnet?

- A. Acting as a dedicated subnet to host network virtual appliances (NVAs) with routing propagation capabilities
- B. Serving as the hub for the exchange of routing information
- C. Hosting virtual machines for routing propagation purposes
- D. Providing DNS resolution for on-premises networks

Answer: B

Explanation:

The route server subnet in Azure is a dedicated subnet that hosts the Azure Route Server, which functions as the hub for dynamic routing information exchange between Azure virtual networks and BGP-enabled network virtual appliances (NVAs) or on-premises routers. It enables seamless and centralized route propagation.

NEW QUESTION # 15

Your organization is in the process of optimizing its Azure network architecture and wants to dynamically manage and exchange routing information between its virtual networks and on-premises networks.

Which Azure service would help to provide a centralized point for efficient route management and dynamic routing?

- A. Azure VPN Gateway
- B. Azure ExpressRoute
- **C. Azure Route Server**
- D. Azure Virtual WAN

Answer: C

Explanation:

Azure Route Server enables dynamic route exchange using BGP between your Azure virtual network and network virtual appliances (NVAs) or on-premises networks. It provides a centralized and scalable solution for route management, allowing seamless integration of routing updates without manual configuration changes.

NEW QUESTION # 16

.....

The second step: fill in with your email and make sure it is correct, because we send our FCP - Azure Cloud Security 7.4 Administrator learn tool to you through the email. Later, if there is an update, our system will automatically send you the latest FCP - Azure Cloud Security 7.4 Administrator version. At the same time, choose the appropriate payment method, such as SWREG, DHpay, etc. Next, enter the payment page, it is noteworthy that we only support credit card payment, do not support debit card. Generally, the system will send the FCP_ZCS-AD-7.4 Certification material to your mailbox within 10 minutes. If you don't receive it please contact our after-sale service timely.
