The world today is in an era dominated by knowledge. Knowledge is the most precious asset of a person. If you feel exam is a headache, don't worry. H12-725_V4.0 test answers can help you change this. H12-725_V4.0 study material is in the form of questions and answers like the real exam that help you to master knowledge in the process of practicing and help you to get rid of those drowsy descriptions in the textbook. H12-725_V4.0 Test Dumps can make you no longer feel a headache for learning, let you find fun and even let you fall in love with learning. The content of H12-725_V4.0 study material is comprehensive and targeted so that your learning is no longer blind. H12-725_V4.0 test answers help you to spend time and energy on important points of knowledge, allowing you to easily pass the exam.

Huawei is a leading global provider of information and communications technology (ICT) infrastructure and smart devices. The company is committed to providing its customers with the latest and most innovative technology solutions, and its Huawei H12-725_V4.0 (HCIP-Security V4.0) Certification Exam is no exception.

The H12-725_V4.0 exam is intended for individuals who have already obtained the HCIA-Security certification and have at least three years of experience in the security field. H12-725_V4.0 exam consists of multiple-choice questions, scenario-based questions, and network simulation questions that are designed to test the candidate's practical skills. Passing H12-725_V4.0 exam demonstrates that the candidate has a comprehensive understanding of security technologies and can effectively design, implement, and manage security solutions in a variety of environments. The Huawei H12-725_V4.0 Certification is highly regarded in the IT industry and can help IT professionals advance their careers in the field of security.

Huawei H12-725_V4.0 Exam covers a wide range of topics related to network security. These topics include network security technologies, security management, VPN technologies, intrusion detection and prevention systems, firewall technologies, and more. H12-725_V4.0 exam also requires candidates to demonstrate their ability to configure, maintain and troubleshoot various network security technologies.

Ace Exam Preparation with Huawei H12-725_V4.0 Real Questions

You can now get Huawei H12-725_V4.0 exam certification our PassTorrent have the full version of Huawei H12-725_V4.0 exam. You do not need to look around for the latest Huawei H12-725_V4.0 training materials, because you have to find the best Huawei H12-725_V4.0 Training Materials. Rest assured that our questions and answers, you will be completely ready for the Huawei H12-725_V4.0 certification exam.

Huawei HCIP-Security V4.0 Sample Questions (Q51-Q56):

NEW QUESTION # 51

In the figure, FW_A connects to FW_B through two links working in active/standby mode. When the active link of FW_A is faulty, the old IPsec tunnel 1 needs to be torn down, and IPsec tunnel 2 needs to be established with FW_B through the standby link to route traffic. In this case, configuring the IKE _____ detection mechanism on FW_A helps detect link faults and tear down the IPsec tunnel. (Enter lowercase letters.)

Answer:

Explanation:

dpd

Explanation:

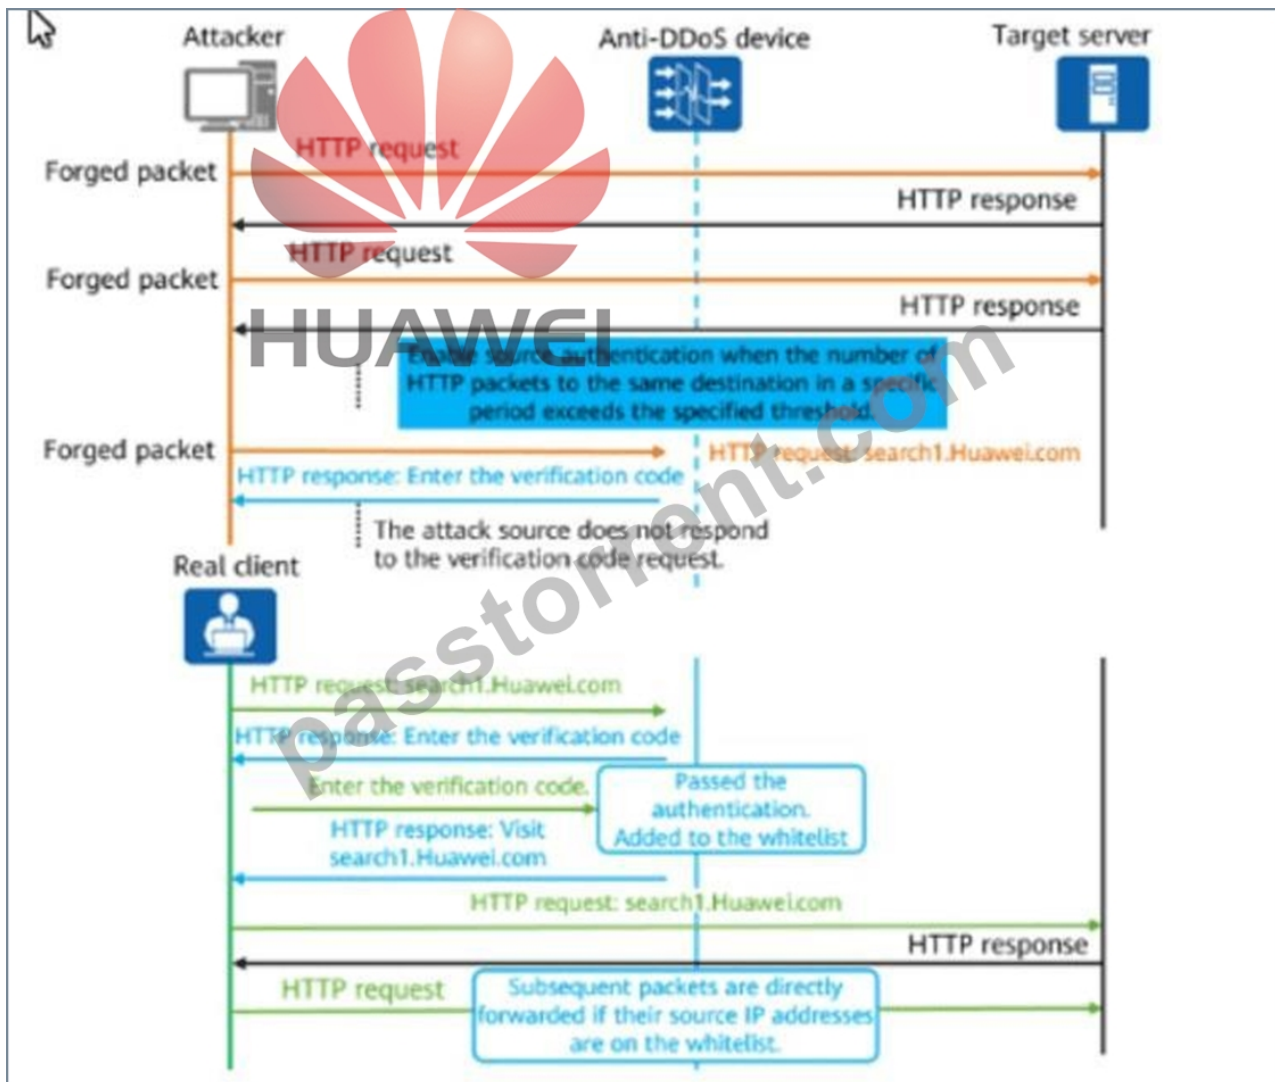

- * What is IKE DPD (Dead Peer Detection)?
- * IKE DPD (Dead Peer Detection) is a mechanism used in IPsec VPNs to check if a remote VPN peer is still reachable.
- * It allows the firewall to detect link failures and automatically tear down and re-establish IPsec tunnels when necessary.
- * Why is DPD required in this scenario?
- * The network uses an active/standby link setup:
- * IPsec Tunnel 1 (Active) # Uses Link 1 (GE0/0/1).
- * IPsec Tunnel 2 (Standby) # Uses Link 2 (GE0/0/2).
- * If Link 1 fails, the firewall must detect the failure and tear down IPsec Tunnel 1 before establishing IPsec Tunnel 2 over Link 2.
- * DPD detects unreachable peers and triggers a failover.
- * How does IKE DPD work?
- * DPD periodically sends probes (HELLO messages) to the remote VPN peer.
- * If no response is received within a timeout period, the firewall assumes the peer is down.
- * The firewall deletes the IPsec tunnel and switches to the backup link.
- * Why is the answer "dpd" (lowercase)?
- * The question explicitly asks for lowercase letters.
- * "dpd" (Dead Peer Detection) is the correct technical term in Huawei firewalls and networking standards.

HCIP-Security References:

- * Huawei HCIP-Security Guide# IPsec VPN High Availability & DPD
- * Huawei USG Series Firewall Configuration Guide# IKE Dead Peer Detection (DPD)

NEW QUESTION # 52

The figure shows the defense mechanism of an HTTP flood attack. Which source IP detection technology is displayed in the figure?

- A. Basic mode
- **B. Enhanced mode**
- C. 302 redirect mode
- D. URI monitoring

Answer: B

Explanation:

1##Understanding HTTP Flood Attacks:

* An HTTP flood attack is a type of DDoS attack where an attacker sends a large number of HTTP requests to a target server, overloading its resources.

* Attackers often use botnets or spoofed IP addresses to send forged HTTP requests, making it difficult to differentiate between legitimate and malicious traffic.

2##What is Happening in the Figure?

* The Anti-DDoS device detects an abnormally high number of HTTP requests from certain IPs.

* It challenges suspicious clients by requiring them to complete an authentication step (such as entering a verification code).

* Legitimate users can pass the authentication and get whitelisted, while bots and attackers fail to respond and are blocked.

3##Why is "Enhanced Mode" the Correct Answer?

* Enhanced Mode is an advanced source IP detection technology that uses verification codes or JavaScript challenges to distinguish real users from bots.

* Key features of Enhanced Mode:

* Verification challenge (e.g., CAPTCHA, JavaScript check).

* Whitelisting of verified users to prevent further verification delays.

* Blocks attack sources that fail to respond to verification.

* In the figure, the system prompts suspicious users to enter a verification code before allowing further access.

* Attackers typically do not respond, while legitimate users complete the challenge and continue browsing normally.

HCIP-Security References:

- * Huawei HCIP-Security Guide# HTTP Flood Attack Protection
- * Huawei Anti-DDoS Solution Guide# Source IP Detection Methods
- * Huawei WAF Documentation# Enhanced Mode for Web Attack Mitigation

NEW QUESTION # 53

When a user accesses the virtual gateway, the user can access the SSL VPN only after the user terminal passes the host check policy.

- A. TRUE
- B. FALSE

Answer: A

Explanation:

Comprehensive and Detailed Explanation:

- * Host check policy is a security mechanism in SSL VPN to verify terminal security compliance before granting access.
 - * It checks for:
 - * Antivirus software
 - * Operating system patches
 - * Running processes
 - * Security settings
 - * If the terminal fails the host check, access is denied.
 - * Why is this statement true?
 - * A successful host check is required before an SSL VPN session is allowed.
- HCIP-Security References:
- * Huawei HCIP-Security Guide # SSL VPN Host Check Policy

NEW QUESTION # 54

Which of the following statements is true about the outgoing traffic in the firewall virtual system?

- A. Traffic from the private network interface to the public network interface is limited by the outbound bandwidth.
- B. Traffic from the private network interface to the public network interface is limited by the inbound bandwidth.
- C. Traffic from the public network interface to the private network interface is limited by the inbound bandwidth.
- D. Traffic from the public network interface to the private network interface is limited by the outbound bandwidth.

Answer: A

Explanation:

Comprehensive and Detailed Explanation:

- * Inbound bandwidth= Traffic entering the firewall.
 - * Outbound bandwidth= Traffic leaving the firewall.
 - * Correct answer:
 - * A. Private # Public traffic is controlled by outbound bandwidth.
 - * Why are the other options incorrect?
 - * B is incorrect because public # private traffic is controlled by inbound bandwidth, not outbound.
 - * C is incorrect because inbound bandwidth does not apply to private # public traffic.
 - * D is incorrect because public # private traffic is controlled by inbound bandwidth.
- HCIP-Security References:
- * Huawei HCIP-Security Guide # Firewall Virtual System Bandwidth Control

NEW QUESTION # 55

iMaster NCE-Campus has a built-in LDAP module that enables it to function as an LDAP server to interconnect with access devices through LDAP.

- A. FALSE
- B. TRUE

Answer: A

Explanation:

Comprehensive and Detailed Explanation:

* iMaster NCE-Campus does not have a built-in LDAP server. Instead, it integrates with external authentication servers such as:

* RADIUS servers

* Active Directory (AD) with LDAP

* HWTACACS servers

* Why is this statement false?

* iMaster NCE-Campus can connect to LDAP but does not act as an LDAP server itself.

HCIP-Security References:

* Huawei HCIP-Security Guide # iMaster NCE-Campus Authentication Integration

NEW QUESTION # 56

.....

If you want to buy our H12-725_V4.0 study guide in a preferential price, that's completely possible. In order to give back to the society, our company will prepare a number of coupons on our official website. Once you enter into our websites, the coupons will be very conspicuous. Remember to write down your accounts and click the coupon. When you pay for our H12-725_V4.0 Training Material, the coupon will save you lots of money. The number of our free coupon is limited. So you should click our website frequently. What's more, our coupon has an expiry date. You must use it before the deadline day. What are you waiting for? Come to buy our H12-725_V4.0 practice test in a cheap price.
