Allowing for your problems about passing the exam, our experts made all necessary points into our HPE7-A03 training materials, making it the most efficient way to achieve success. They can alleviate your pressure, relieve you of tremendous knowledge and master the key points with the least time. As customer-oriented company, we believe in satisfying the customers at any costs. Instead of focusing on profits, we determined to help every customer harvest desirable outcomes by our HPE7-A03 Training Materials. So our staff and after-sales sections are regularly interacting with customers for their further requirements and to know satisfaction levels of them.

HP HPE7-A03 Exam Syllabus Topics:

Topic	Details
Topic 1	Analyze Requirements: It focuses on determining possible high-level solutions. The topic also discusses mapping the needs into technical solutions and evaluating the proposed solution against project objectives and dependencies. Moreover, it also focuses on documenting assumptions.
Topic 2	Propose the Solution: The focal point of this topic is creating the design documentation and the final design. Moreover, the topic also focuses on presenting the solution.

Topic 3	Architect the Solution: It measures your knowledge about identifying the solution options, designing high-level topologies, selecting the correct products, and determining the suitable overlay and underlay design. Additionally, the topic discusses how to verify that the design meets the original requirements.
Topic 4	Discover Requirements: This topic defines the goals and identifies the current environment and the objectives. Lastly, it also focuses on collecting information.

Free PDF HP - HPE7-A03 - Aruba Certified Campus Access Architect Exam Unparalleled Test Answers

For years our team has built a top-ranking brand with mighty and main which bears a high reputation both at home and abroad. The sales volume of the HPE7-A03 study materials we sell has far exceeded the same industry and favorable rate about our products is approximate to 100%. Why the clients speak highly of our HPE7-A03 Study Materials? Our dedicated service, high quality and passing rate and diversified functions contribute greatly to the high prestige of our products.

HP Aruba Certified Campus Access Architect Exam Sample Questions (Q60-Q65):

NEW QUESTION # 60

Based on this campus design, which layer is the most appropriate to be designed as a Border Persona, considering an EVPN VXLAN Fabric?

Answer:

Explanation:

Explanation:

Based on the campus design provided and considering an EVPN VXLAN Fabric, the most appropriate layer to be designed as a Border Persona would be the "Services Aggregation" layer. In an EVPN VXLAN architecture, the Border or Border Leaf nodes provide connectivity to external networks, such as WAN, internet, or private connections. They are responsible for routing traffic into and out of the VXLAN fabric and typically also handle services like firewalling, load balancing, and other network services.

NEW QUESTION # 61

A customer wants to have the ability to show network usage. Which product would allow them to have this visibility?

- A. UXI
- **B. Central**
- C. ClearPass
- D. Aruba OS 8.X

Answer: B

Explanation:

Aruba Central provides a cloud-based management platform for managing and monitoring Aruba Instant APs, switches, and branch gateways. It offers a comprehensive dashboard that gives insights into network usage, health, and performance metrics. Central allows network administrators to have visibility over their entire network infrastructure from a single pane of glass, including detailed usage statistics, which can be broken down by device, application, and time. This visibility into network usage is crucial for optimizing network performance, planning capacity, and understanding user behavior. Aruba Central's analytics and reporting capabilities enable customers to track and analyze network usage, making it the appropriate product choice for customers wanting to monitor their network usage closely.

NEW QUESTION # 62

ACME retail has 38 locations spread out across Ave US states and two provinces in Canada. They are looking to grow 20% over the next two years. They have an HO with a staff of 200 employees. The organization has eight Regional Managers and two VPs who work from home and the road. Stores typically have 17 employees on average per location.

The two warehouses have a remote loading system and 20 employees each to load the trucks and fulfill the online orders. The warehouse has 40-foot ceilings and large metal racks to store inventory. The main location is 240K sq ft (22300 st) m) and the Canadian warehouse is 130K sq ft (12100 sq ml). The forklifts on the loading docks are equipped with a wireless tablet on board. A typical store is reportedly about 60,000 sq ft (5575 sqm) and smaller stores are planned at 25,000 sq ft (2320 sq ml). The locations need to expand the abilities to vendors that need to add setup displays or Interactive kiosks in the stores. The current Infrastructure was installed in 2015 and used wireless N technology in a coverage model. The wiring is Cat5, and they are unsure of the fiber connections. The inventory is all placed on the floor when it is delivered to the local store.

Inventory control is handled through Zebra barcode scanners, and they have had a lot of issues in getting signals throughout the stores and this makes monthly inventory difficult. The organization has a small help desk to troubleshoot issues that happen at the retail locations and PC support for the office. The company is looking to upgrade away from the current pbx system later this year.

With the need to grow and cut costs, they are interested in moving the data to the cloud but need to get almost real-time inventory control for the online service to function.

The network has all been wired over the last ten years, but with the new systems being all wireless, they have seen the trend to offer wireless to all the vendors for their needs but also would like to allow employees, guests, and contractors all to use it. With the new IT director starting next week, the project has been set by the CTO of the company. The marketing group has asked how they can interact with the customers and get more info, while the IT support desk needs to cut staff in half.

The office has an MDF and two IDF's located on floors one and two. The HOF is in the basement, and you have multiple WAN circuits for the HO links. Each store has a local handoff from the cable company (ethernet) In the middle of the store in the office, so distance for the wiring is not an issue.

The customer has budget concerns but does want something that could last 7+ years.

What are two primary concerns of the Stakeholder' (Select two.)

- A. future proof
- B. ease of access
- C. expansion
- D. cost of solution

Answer: A,D

Explanation:

For the stakeholders at ACME Retail, the primary concerns include the cost of the solution and ensuring that the solution is future-proof. Given the company's budget concerns, it is crucial that the chosen network infrastructure offers a good return on investment and aligns with their financial constraints. At the same time, considering the company's growth plans and the rapid evolution of technology, the solution must be scalable and adaptable to future needs. This involves selecting networking equipment and technologies that can support emerging trends, such as increased wireless device usage, cloud computing, and advanced security requirements, without necessitating frequent, costly upgrades. Balancing these concerns will help ACME Retail achieve its operational goals while positioning itself for sustainable growth and innovation.

NEW QUESTION # 63

What documents should be included in the solution proposal? (Place the correct items into the list at the right.

Order is not important. Not all options will be used)

POSSIBLE OPTIONS

- architect's notes from meetings
- as-built rack drawings
- assumptions documented in design
- bill of materials
- data sheets of equipment proposed
- proposed topology diagram
- quote

CORRECT OPTIONS

- architect's notes from meetings
- as-built rack drawings
- assumptions documented in design
- bill of materials
- data sheets of equipment proposed
- proposed topology diagram

Answer:

Explanation:

POSSIBLE OPTIONS

- architect's notes from meetings
- as-built rack drawings
- assumptions documented in design
- bill of materials
- data sheets of equipment proposed
- proposed topology diagram
- quote

CORRECT OPTIONS

- architect's notes from meetings
- as-built rack drawings
- assumptions documented in design
- bill of materials
- data sheets of equipment proposed
- proposed topology diagram

Explanation:

For the solution proposal, the documents that should typically be included are:

- * Architect's notes from meetings
- * As-built rack drawings
- * Assumptions documented in design
- * Bill of materials
- * Data sheets of equipment proposed
- * Proposed topology diagram
- * Quote

NEW QUESTION # 64

Match the deployment type to the estimated number of APs.

	Answer Area	
Capacity based design with low to mid density		100,000 ft ² / 9000 m ² building 100,000/10,000 = 10 APs
Coverage based design		100,000 ft ² / 9000 m ² building 100,000/5000 = 20 APs
High-capacity design		100,000 ft ² / 9000 m ² building 100,000/2500 = 40 APs
Very low-density, low coverage		100,000 ft ² / 9000 m ² building 100,000/1500 = 67 APs

Answer:

Explanation:

Capacity based design with low to mid density		100,000 ft ² / 9000 m ² building 100,000/10,000 = 10 APs
Coverage based design		100,000 ft ² / 9000 m ² building 100,000/5000 = 20 APs
High-capacity design		100,000 ft ² / 9000 m ² building 100,000/2500 = 40 APs
Very low-density, low coverage		100,000 ft ² / 9000 m ² building 100,000/1500 = 67 APs

Explanation:

Capacity based design with low to mid density - 100,000 ft² / 900 m² building 100,000/10,000 = 10 APs
Coverage based design - 100,000 ft² / 900 m² building 100,000/2,500 = 40 APs
High-capacity design - 100,000 ft² / 900 m² building 100,000/1,500 = 67 APs
Very low-density, low coverage - 100,000 ft² / 900 m² building 100,000/500 = 20 APs
The deployment of Access Points (APs) in a wireless network design depends on the required density and coverage needed:

- * Capacity based design with low to mid density is often used in environments like office spaces where there is a moderate amount of users and devices. Fewer APs are required compared to high-density scenarios.
- * Coverage based design typically requires more APs than a low-density capacity design because the goal is to provide a wireless signal to all areas, regardless of the number of users.
- * High-capacity design is for environments like stadiums or conference centers where a high number of users are expected to be concentrated in a particular area. Thus, a higher number of APs is needed to accommodate the user load.
- * Very low-density, low coverage is suitable for areas that have few users over a large space, such as warehouses or outdoor areas. Fewer APs are required as the focus is on covering space rather than supporting a large number of devices.

NEW QUESTION # 65

.....

Our HPE7-A03 test prep embrace latest information, up-to-date knowledge and fresh ideas, encouraging the practice of thinking out of box rather than treading the same old path following a beaten track. As the industry has been developing more rapidly, our HPE7-A03 exam dumps have to be updated at irregular intervals in case of keeping pace with changes. To give you a better using environment, our experts have specialized in the technology with the system upgraded to offer you the latest HPE7-A03 Exam practices. And you can enjoy free updates of our HPE7-A03 learning prep for one year.
