

Test MB-335 Engine Version - Free MB-335 Exam

P.S. Free & New MB-335 dumps are available on Google Drive shared by LatestCram: <https://drive.google.com/open?id=1dH6drEVSJybrHB3ajAK2PAQUptbXj3js>

As long as you get to know our MB-335 exam questions, you will figure out that we have set an easier operation system for our candidates. Once you have a try, you can feel that the natural and seamless user interfaces of our MB-335 study materials have grown to be more fluent and we have revised and updated MB-335 learning guide according to the latest development situation. In the guidance of teaching syllabus as well as theory and practice, our MB-335 training engine has achieved high-quality exam materials according to the tendency in the industry.

Microsoft MB-335 certification exam is an excellent opportunity for professionals who want to demonstrate their expertise in implementing and configuring supply chain management solutions using Microsoft Dynamics 365. By passing MB-335 exam, candidates can enhance their career prospects and gain recognition as experts in this field. With the right preparation and resources, candidates can successfully pass the exam and achieve their certification goals.

The main subjects covered in the MB-335 exam are planning configuration, manufacturing execution, supply chain management fundamentals, product information management, inventory management, quality management, transportation management, and sales and purchase order management. In addition, the candidate is expected to know how to use the application's different tools and features to optimize the supply chain management process. The passing score for MB-335 Exam is 700 out of 1000 points, and the candidate has a maximum of 180 minutes to complete it.

Microsoft MB-335 exam covers a wide range of topics related to Dynamics 365 Supply Chain Management, including inventory management, production control, procurement, sales order management, and warehouse management. MB-335 exam also tests the candidate's ability to implement and configure other related applications, such as Power Apps, Power Automate, and Power BI. Additionally, the exam measures the candidate's ability to work with various technologies and tools, such as SQL Server, Visual Studio, and Azure.

Microsoft Dynamics 365 Supply Chain Management Functional Consultant Expert Verified Practice Cram & MB-335 Study Pdf Dumps & Microsoft Dynamics 365 Supply Chain Management Functional Consultant Expert Exam Training Dumps

As a market leader, our company is able to attract quality staffs, it actively seeks out those who are energetic, persistent, and

professional to various MB-335 certificate and good communicator. And we strongly believe that the key of our company's success is its people, skills, knowledge and experience. The successful selection, development and MB-335 training of personnel are critical to our company's ability to provide a high standard of service to our customers and to respond their needs on our MB-335 exam questions.

Microsoft Dynamics 365 Supply Chain Management Functional Consultant Expert Sample Questions (Q135-Q140):

NEW QUESTION # 135

You need to configure the system for plastic operations.

Which two parts should be manually reported as finished? Each correct answer presents part of the solution.

NOTE: Each correct selection is worth one point.

- A. machined plastic pieces
- B. unmachined plastic pieces
- C. excess plastic
- D. mold tooling

Answer: A,B

Explanation:

Topic 2, Fabrikam inc sanitation cleaning solutions

Background

Fabrikam Inc. is a manufacturer of sanitation cleaning solutions and equipment including carpet/floor cleaners, pressure washers, scrubbers and vacuums.

Fabrikam Inc. is a single legal entity based in New York city.

_ Current environment

Products manufactured

* Cleaning equipment

o floor cleaner

o pressure washers

o scrubbers

o vacuums

* Liquid cleaning solutions

o No scent

o Orange scent (subcontracted to a vendor named VendorA)

o Pine scent (subcontracted to a vendor named VendorA)

The production quantity for the finished unscented liquid cleaning solution is 40-liters. IngredientC 'or unscented liquid cleaning solution is stored in inventory in 50-liter barrels and allocated in 50-liter increments.

Two barrels of IngredientC are used to produce a barrel of unscented liquid cleaning solution.

Production sites

* The Eastern United States facility manufactures equipment.

* The Western United States facility manufactures liquid cleaning solutions.

* Raw materials and finished products are stocked at the warehouse and distributed from the warehouse.

Warehouse facilities

The warehouse consists of the following zones:

Zone	Description
1	This zone stores parts and material for manufacturing machine equipment and finished products. It consists of four aisles, five shelves, and 20 bins.
2	This zone stores barrels of liquid raw material and finished products. It consists of five aisles and 20 shelves.

_ Requirements

Cleaning equipment manufacturing

You identify the following requirements for manufacturing cleaning equipment:

* Production is Make to Stock and must be scheduled at an operational level.

* Machine equipment is produced on an assembly line. Scheduling must be based on production orders.

* Finished products must be packaged and shipped directly from the warehouse.

* To reduce delivery times and excess inventory, equipment must be produced as needed.

* The ability to schedule production must be based on resource capacity and the availability of required materials.

* Production order operations must be scheduled to start only when capacity and materials are available at the same time and in the

required quantities.

Liquid cleaning solution manufacturing

- * Production is Make to Order and is scheduled at the job level. Products must be manufactured in batches.
- * Finished products must be packaged and shipped directly from the warehouse.
- * You must be able to calculate the estimated consumption of ingredients and ensure that the amount is divisible by the number of units the raw material is available.
- * Formula changes must be reviewed and approved. You must ensure that approved formulas cannot be deleted or edited.

Approved formulas may be deactivated.

* An ingredient used to manufacture unscented cleaning solution is defined as a restricted product. You must be able to automatically print a product safety data sheet (PSDS) with the packing slip for any order that includes unscented cleaning solution.

* Production must be scheduled to start by date and time according to the order that is specified by the production route.

* You must implement a scheduled Kanban rule that meets the following requirements:

- o Prevent overloading a work cell for scheduled Kanbans.

- o Visualize excess inventory in a supermarket.

- o Store products in supermarkets before they are consumed or shipped.

* You must link relevant financial dimension data to the inventory transactions at each site to ensure that you can trace profit and loss figures directly to East site and West site respectively.

* You must set up production operations for sub-contracting of Pine scent and Orange scent solution to VendorA to ensure that a purchase order is automatically created based on estimation of a production order.

Costing

* The price of raw materials used for manufacturing unscented cleaning solution must be tracked based upon commodity exchange pricing. The margin and cost multiplier must be set up for commodity traded raw material.

* You must set up cost calculation groups to ensure that indirect costs that originate in the manufacturing of finished goods are recognized and absorbed into the product cost.

* The production manager needs to set up picking list journals and BOM item consumption.

Reporting

* Production control parameters must be setup for reporting of automatic BOM and Route consumption.

* You must create reports that include information about cost records and categories for items, and calculation formulas for indirect costs.

* You must treat manufactured items as purchased items for cost roll-up purposes during BOM calculations and reporting.

* You must configure automatic route consumption in connection with the automatic running of Report as finished.

Inventory control

You must not be required to track the total number for items when you enter inventory information into the system. Lot numbers for items must be entered when items are picked from inventory.

Issues

Users report the following issues:

* The production manager observes that items are being deducted from inventory two times on production jobs. A shop supervisor mistakenly registers the process for assembling batteries for the pressure washers to Registered as prepared. You must reschedule the process for a future date.

* Customer1 orders 20 barrels of unscented solution. The order is confirmed. Production must be scheduled to start on December 21 to meet the customer's delivery deadline.

* User2 reports that costs for manufactured items are twice as high as expected.

* UserD reports that the formula for the liquid cleaning solution sometimes changes during production. You must enforce the policies regarding formula editing for current and future use.

NEW QUESTION # 136

A beverage company uses Dynamics 365 Supply Chain Management batch processing for production- You need to identify the ingredient type used in batch processing when the base attribute of a product is added to a formula line.

What is the ingredient type?

- A. compensating
- **B. active**
- C. none
- D. filler

Answer: B

Explanation:

The ingredient type used in batch processing when the base attribute of a product is added to a formula line is Active. Here is the explanation:

A formula line is a line that identifies an ingredient or item that makes up a formula. A formula line can have one of these ingredient types: None, Active, Compensating, or Filler¹. The ingredient type determines how the system handles the line during master planning and batch order production¹.

The Active ingredient type indicates that the item is an active ingredient that has a variable quantity and a fixed potency. The active ingredient of a product is modeled by using a product-specific batch attribute that has a minimum value, a maximum value, and a target level². The target level of a batch attribute represents the estimated percentage of an active ingredient in a product².

When the base attribute of a product is added to a formula line, it means that the product has an active ingredient that is defined by the base attribute. Therefore, the ingredient type for the formula line should be Active. This way, the system can calculate the amount of ingredients to use in a production batch based on the concentration of active ingredients in selected product batches². This process is known as batch balancing².

1: Batch balancing 2: Formulas and formula versions

NEW QUESTION # 137

You are the lead product design manager at a Process manufacturing plant.

A formula that produces egg yolks as a by-product. This by-product is added back into inventory at standard cost and can be used in other production batches.

You need to select the by-product cost allocation.

Which cost allocation type should you use?

- A. Per series
- **B. Recycled**
- C. Per quantity
- D. Percent

Answer: B

NEW QUESTION # 138

A bicycle manufacturer uses Dynamics 365 Supply Chain Management.

The manufacturer experiences a supply chain issue with a metal used to fabricate the wheel. Due to the issue, the manufacturer must change the bicycle wheel assembly temporarily. Production workers require an interactive visual guide to complete production.

You need to configure the features.

Which features should you configure? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer Area

Requirement

Attach the guide for the production process.

Feature

BOM version
Route versions
Released product
Bill of materials
BOM version

Open the guide from the production floor.

QR code
QR code
Maintenance plan
License plate barcode
Maintenance checklist

Answer:

Explanation:

NEW QUESTION # 139

A company produces paints and assembles bicycle frames.

You must account for paint drying time before assembly operations can begin.

You need to set up the operation to encompass queue times.

Which two options can you use? Each correct answer presents part of the solution.

NOTE: Each correct selection is worth one point.

- A. Enter a value in the queue time after field for the painting operation.
- B. Enter a value in the transit time on the painting operation.
- C. Enter a value in the queue time before field for the assembly operation.
- D. Build capabilities for each resource related to color.
- E. Make a resource group for each size and color and assign that group to the operation.

Answer: A,C

Explanation:

* Queue time is the time that a job waits at a work center before or after the job is processed¹. You can use queue time to account for paint drying time before assembly operations can begin. You can specify queue time in minutes, hours, or days on the route operations that are attached to the production order².

* To set up the operation to encompass queue times, you should do the following:

* Enter a value in the queue time after field for the painting operation. This value indicates how long the painted bicycle frames must wait at the painting work center before they can be moved to

* the next operation². For example, if the paint drying time is 24 hours, you can enter 24 in the queue time after field and select Hours as the unit.

* Enter a value in the queue time before field for the assembly operation. This value indicates how long the painted bicycle frames must wait at the assembly work center before they can be processed². For example, if there is a delay between the arrival of the frames and the start of the assembly, you can enter a value that reflects this delay in the queue time before field and select the appropriate unit.

* The other options are not correct, because they do not involve queue times. Building capabilities for each resource related to color would allow you to assign resources based on their color proficiency, but it would not account for paint drying time. Entering a value in the transit time on the painting operation would indicate how long it takes to move the painted bicycle frames from one work center to another, but it would not include the waiting time before or after the movement. Making a resource group for each size and color and assigning that group to the operation would allow you to group resources that have similar characteristics and can be used interchangeably in production, but it would not affect the queue times.

1: Queue times 2: Set up operations scheduling

NEW QUESTION # 140

.....

Today is the right time to learn new and in demands skills. You can do this easily, just get registered in Microsoft Dynamics 365 Supply Chain Management Functional Consultant Expert MB-335 certification exam and start preparation with Microsoft MB-335 exam dumps. The Microsoft Dynamics 365 Supply Chain Management Functional Consultant Expert MB-335 pdf questions and practice test are ready for download. Just pay the affordable Microsoft MB-335 authentic dumps charges and click on the download button.
