

Test MuleSoft-Integration-Architect-I Pass4sure, Certification MuleSoft-Integration-Architect-I Training

2025 Latest Pass4SureQuiz MuleSoft-Integration-Architect-I PDF Dumps and MuleSoft-Integration-Architect-I Exam Engine Free Share: https://drive.google.com/open?id=15RG_zTTEUK47g6DEKuFOHGqTOMYayxnR

Pass4SureQuiz provides one of the most comprehensive and high-quality Salesforce Certified MuleSoft Integration Architect I Exam Questions. We cut through the nonsense and made Salesforce Certified MuleSoft Integration Architect I exam preparation useful, to get your Salesforce Certified MuleSoft Integration Architect I certification on the first try. Our Salesforce Certified MuleSoft Integration Architect I MuleSoft-Integration-Architect-I Questions include real-world questions that will help you learn the fundamentals of the topic not only for the Salesforce Certified MuleSoft Integration Architect I MuleSoft-Integration-Architect-I exam but also for your future profession.

Over the past few years, we have gathered hundreds of industry experts, defeated countless difficulties, and finally formed a complete learning product - MuleSoft-Integration-Architect-I test answers, which are tailor-made for students who want to obtain Salesforce certificates. According to statistics, by far, our MuleSoft-Integration-Architect-I Guide Torrent has achieved a high pass rate of 98% to 99%, which exceeds all others to a considerable extent. At the same time, there are specialized staffs to check whether the Salesforce Certified MuleSoft Integration Architect I test torrent is updated every day.

100% Free MuleSoft-Integration-Architect-I – 100% Free Test Pass4sure | Newest Certification Salesforce Certified MuleSoft Integration Architect I Training

After we develop a new version, we will promptly notify you. At MuleSoft-Integration-Architect-I, you have access to the best resources in the industry. We guarantee that you absolutely don't need to spend extra money to buy other products. MuleSoft-Integration-Architect-I practice materials will definitely make you feel value for money. If you are really in doubt, you can use our trial version of our MuleSoft-Integration-Architect-I Exam Questions first. We believe that you will definitely make a decision immediately after use!

Salesforce Certified MuleSoft Integration Architect I Sample Questions (Q165-Q170):

NEW QUESTION # 165

An organization is designing multiple new applications to run on CloudHub in a single Anypoint VPC and that must share data using a common persistent Anypoint object store V2 (OSv2).

Which design gives these mule applications access to the same object store instance?

- A. The object store V2 rest API configured to access the persistent object store
- B. An Anypoint MQ connector configured to directly access the persistent object store
- C. Object store V2 can be shared across cloudhub applications with the configured osv2 connector
- D. AVM connector configured to directly access the persistence queue of the persistent object store

Answer: C

Explanation:

Object Store v2 (OSv2) in MuleSoft allows multiple applications within the same Anypoint Virtual Private Cloud (VPC) to share data. To achieve this, the OSv2 connector must be configured in each application to access the common persistent object store instance. This configuration enables the applications to read from and write to the same object store, facilitating data sharing. Object Store v2 is designed to be persistent and reliable, making it suitable for scenarios where data needs to be retained and shared across multiple applications.

NEW QUESTION # 166

A DevOps team has adequate observability of individual system behavior and performance, but it struggles to track the entire lifecycle of each request across different microservices.

Which additional observability approach should this team consider adopting?

- A. Analytics
- B. Data mining
- **C. Tracing**
- D. Metrics

Answer: C

Explanation:

To track the entire lifecycle of each request across different microservices, the DevOps team should consider adopting tracing. Distributed tracing allows teams to follow a request as it travels through the various microservices, providing visibility into how long each part of the request lifecycle takes and where any bottlenecks or failures occur. Tools like Zipkin, Jaeger, and AWS X-Ray are commonly used for this purpose.

Tracing complements metrics and logging by providing detailed insights into the interactions and dependencies between services.

NEW QUESTION # 167

An integration Mule application is being designed to process orders by submitting them to a backend system for offline processing. Each order will be received by the Mule application through an HTTPS POST and must be acknowledged immediately. Once acknowledged, the order will be submitted to a backend system.

Orders that cannot be successfully submitted due to rejections from the backend system will need to be processed manually (outside the backend system).

The Mule application will be deployed to a customer-hosted runtime and is able to use an existing ActiveMQ broker if needed.

The backend system has a track record of unreliability both due to minor network connectivity issues and longer outages.

What idiomatic (used for their intended purposes) combination of Mule application components and ActiveMQ queues are required to ensure automatic submission of orders to the backend system, while minimizing manual order processing?

- A. Until Successful component MuleSoft Object Store ActiveMQ is NOT needed or used
- B. An On Error scope Non-persistent VM ActiveMQ Dead Letter Queue for manual processing
- **C. Until Successful component ActiveMQ long retry Queue ActiveMQ Dead Letter Queue for manual processing**
- D. An On Error scope MuleSoft Object Store ActiveMQ Dead Letter Queue for manual processing

Answer: C

Explanation:

Correct answer is using below set of activities Until Successful component ActiveMQ long retry Queue ActiveMQ Dead Letter Queue for manual processing We will see why this is correct answer but before that lets understand few of the concepts which we need to know. Until Successful Scope The Until Successful scope processes messages through its processors until the entire operation succeeds. Until Successful repeatedly retries to process a message that is attempting to complete an activity such as: - Dispatching to outbound endpoints, for example, when calling a remote web service that may have availability issues. - Executing a component method, for example, when executing on a Spring bean that may depend on unreliable resources. - A sub-flow execution, to keep re-executing several actions until they all succeed, - Any other message processor execution, to allow more

complex scenarios. How this will help requirement : Using Until Successful Scope we can retry sending the order to backend systems in case of error to avoid manual processing later. Retry values can be configured in Until Successful Scope Apache ActiveMQ It is an open source message broker written in Java together with a full Java Message Service client ActiveMQ has the ability to deliver messages with delays thanks to its scheduler. This functionality is the base for the broker redelivery plug-in. The redelivery plug-in can intercept dead letter processing and reschedule the failing messages for redelivery. Rather than being delivered to a DLQ, a failing message is scheduled to go to the tail of the original queue and redelivered to a message consumer. How this will help requirement : If backend application is down for a longer duration where Until Successful Scope wont work, then we can make use of ActiveMQ long retry Queue. The redelivery plug-in can intercept dead letter processing and reschedule the failing messages for redelivery. NEW QUESTION # 168

A high-volume eCommerce retailer receives thousands of orders per hour and requires notification of its order management, warehouse, and billing system for subsequent processing within 15 minutes of order submission through its website.

Which integration technology, when used for its typical and intended purpose, meets the retailer's requirements for this use case?

- A. Managed File Transfer (MFT)
- B. Enterprise Data Warehouse (EDW)
- C. Extract Transform Load (ETL)
- **D. Publish/Subscriber Messaging Bus (Pub/Sub)**

Answer: D

Explanation:

The Publish/Subscriber Messaging Bus (Pub/Sub) model is well-suited for high-volume, real-time communication and notification requirements. In this scenario, the retailer needs to notify its order management, warehouse, and billing systems within 15 minutes of order submission. Pub/Sub messaging systems enable asynchronous communication where messages (orders) are published to a topic and multiple subscribers (order management, warehouse, billing systems) receive notifications simultaneously. This decouples the systems and ensures that each subscriber receives the message promptly for subsequent processing.

NEW QUESTION # 169

A rate limiting policy has been applied to a soap V1.2 API published in Clonduh. The API implementation catches errors in a global error handler on error propagate in the main flow for HTTP: RETRY_EXHAUSTED with HTTP status set to 429 and any with the HTTP status set to 500.

What is the expected HTTP status when the client exceeds the quota of the API calls?

- A. HTTP status 401 unauthorized for policy violation
- B. HTTP status 400 from the rate-limiting policy violation since the call does not reach the back-end
- **C. HTTP status 429 as defined in the HTTP:RETRY_EXHAUSTED error handler in the API B. HTTP status 500 as defined in the ANY error handler in the API since an API:RETRY_EXHAUSTED will be generated**

Answer: C

NEW QUESTION # 170

.....

The web-based Salesforce Certified MuleSoft Integration Architect I MuleSoft-Integration-Architect-I practice exam is also compatible with Chrome, Microsoft Edge, Internet Explorer, Firefox, Safari, and Opera. If you want to assess your MuleSoft-Integration-Architect-I Test Preparation without software installation, the MuleSoft-Integration-Architect-I web-based practice exam is ideal for you. And Salesforce offers 365 days updates.
