Fortinet NSE7_OTS-7.2 certification exam is designed for individuals who are looking to validate their skills and knowledge in the field of operational technology (OT) security. As OT systems become increasingly interconnected with IT networks, the need for professionals with specialized knowledge in this area has grown. NSE7_OTS-7.2 exam covers a range of topics including OT security concepts, OT network design and implementation, and OT security operations and management.

The NSE7_OTS-7.2 Certification Exam covers a wide range of topics related to OT security, including ICS and SCADA security, network segmentation, access control, threat detection and mitigation, incident response, and compliance. NSE7_OTS-7.2 exam consists of 60 multiple-choice questions, and the candidates have 120 minutes to complete it. The passing score for the exam is 70%, and the exam is available in English and Japanese.

Fortinet NSE 7 - OT Security 7.2 Sample Questions (Q52-Q57):

NEW QUESTION # 52

What can be assigned using network access control policies?

- A. Logical networks
- B. Profiling rules
- C. FortiNAC device polling methods

- D. Layer 3 polling intervals

Answer: A

NEW QUESTION # 53

An OT network consists of multiple FortiGate devices. The edge FortiGate device is deployed as the secure gateway and is only allowing remote operators to access the ICS networks on site.

Management hires a third-party company to conduct health and safety on site. The third-party company must have outbound access to external resources.

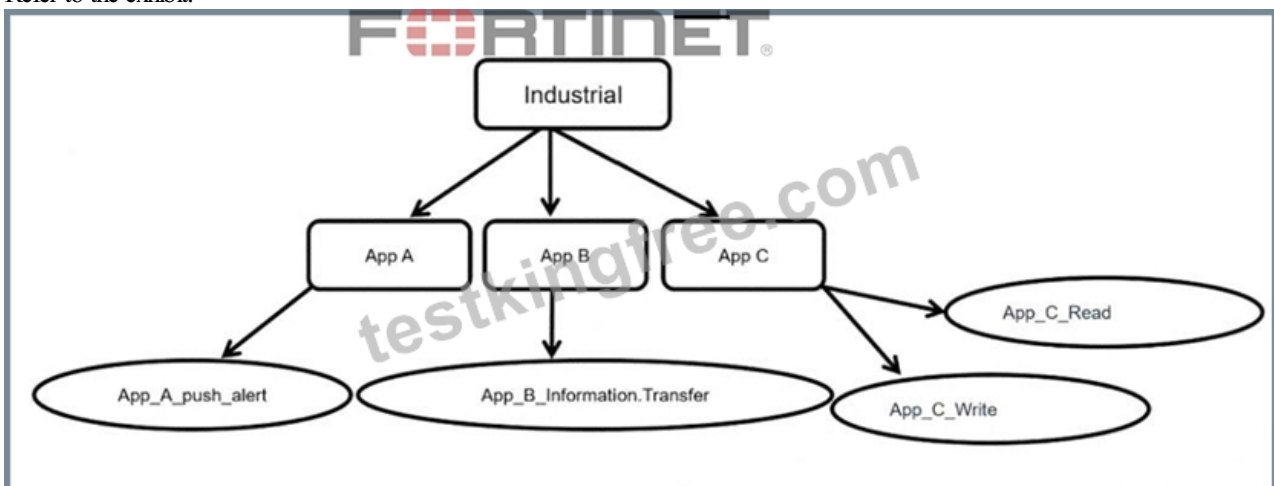

As the OT network administrator, what is the best scenario to provide external access to the third-party company while continuing to secure the ICS networks?

- A. Split the edge FortiGate device into multiple logical devices to allocate an independent VDOM for the third-party company.
- B. Configure outbound security policies with limited active authentication users of the third-party company.
- C. Implement an additional firewall using an additional upstream link to the internet.
- D. Create VPN tunnels between downstream FortiGate devices and the edge FortiGate to protect ICS network traffic.

Answer: A

NEW QUESTION # 54

Refer to the exhibit.

Which statement is true about application control inspection?

- A. You can control security actions only on the parent-level application signature
- B. The parent signature takes precedence over the child application signature.
- C. The industrial application control inspection process is unique among application categories.
- D. Security actions cannot be applied on the lowest level of the hierarchy.

Answer: A

NEW QUESTION # 55

An OT network architect needs to secure control area zones with a single network access policy to provision devices to any number of different networks. On which device can this be accomplished?

- A. FortiNAC
- B. FortiGate
- C. FortiEDR
- D. FortiSwitch

Answer: B

An OT network architect can accomplish the goal of securing control area zones with a single network access policy to provision devices to any number of different networks on a FortiGate device.

You are investigating a series of incidents that occurred in the OT network over past 24 hours in FortiSIEM. Which three FortiSIEM options can you use to investigate these incidents? (Choose three.)

- Answer: C,D,E**
