P_BTPA_2408 Valid Test Fee & P_BTPA_2408 Latest Exam Online

Our experts have devised a set of exam like P_BTPA_2408 practice tests for the candidates who want to ensure the highest percentage in real exam. Doing them make sure your grasp on the syllabus content that not only imparts confidence to you but also develops your time management skills for solving the test comprise given time lim. P_BTPA_2408 Practice Tests comprise a real exam like scenario and are amply fruitful to make sure a memorable success in P_BTPA_2408 exam.

SAP Certified Professional - Solution Architect - SAP BTP Sample Questions (Q14-Q19):

NEW QUESTION # 14

The finance department is creating a series of reports for their line of business (LOB) users and would like to integrate the reports in a front-end portal. They would like the LOB users to maintain the portal, as opposed to IT. As a solution architect, they come to you to recommend which SAP BTP service best fits their needs.

Which service would you recommend?

- A. SAP Build Work Zone, advanced edition
- B. SAP Launchpad Service
- C. SAP Build Work Zone, standard edition
- D. SAP Fiori Launchpad

Answer: A

Explanation:

The SAP Build Work Zone, advanced edition is the best fit for the finance department's requirement to integrate reports into a front-end portal and allow Line of Business (LOB) users to maintain the portal.

* Why SAP Build Work Zone, Advanced Edition?

* It provides a flexible, enterprise-grade portal for integrating various business applications and content, such as reports, dashboards, and links.

* Allows LOB users to maintain and customize the portal independently, without relying on IT.

* Supports integration with non-SAP and SAP applications seamlessly, including embedding analytics and reports.

* Other Options:

* A (SAP Launchpad Service): Focused on enabling role-based access to SAP Fiori apps but lacks advanced customization features for LOB users.

* C (SAP Build Work Zone, Standard Edition): Suitable for basic workspaces but lacks advanced capabilities for LOB-driven maintenance.

* D (SAP Fiori Launchpad): Primarily used for launching SAP applications, not for integrating diverse reports or customizing portals.

* SAP Build Work Zone Documentation

NEW QUESTION # 15

You are a solution architect on a brownfield project where an SAP ECC 6.0 system is being migrated to SAP S/4HANA Cloud public edition. Two mission-critical legacy applications must be migrated to the new system.

There is some debate on the project team as to the appropriate programming model to use:

* Application 1 was originally written using classic ABAP. The underlying SAP tables that the application originally relied on have been removed and the data now exists in a new simplified table in SAP S/4HANA Cloud public edition (to which table extensions are not permitted). Additional data needed for the application resides in SAP Ariba. Remote interfaces exist for both to select the data.

* Application 2 was originally written using Java and relied upon tables from the SAP ECC 6.0 system as well as SAP PLM 4.0. The PLM system will be retired; however, the SAP S/4HANA Cloud public edition instance has all the data needed for the application. No remote interfaces exist to select the data.

Which of the following approaches should the customer use? Note: There are 2 correct answers to this question.

- A. Rewrite application 2 using the ABAP RESTful Application Programming Model
- B. Rewrite application 1 using the ABAP RESTful Application Programming Model
- C. Rewrite application 2 using the Cloud Application Programming Model
- D. Rewrite application 1 using the Cloud Application Programming Model

Answer: B,C

NEW QUESTION # 16

Applications on a customer's Marketing subaccount continuously crash due to insufficient memory.

At the global account level, what can you use to allocate more memory to the Marketing subaccount?

- A. Entitlement
- B. Quota
- C. Entity Assignment
- D. Service Assignment

Answer: B

Explanation:

At the global account level in SAP BTP, the quota determines the amount of resources (e.g., memory, CPU) allocated to subaccounts.

* Quota:

* Administrators can increase the quota for a subaccount (e.g., the Marketing subaccount) to allocate additional memory.

* The quota defines the upper limit of resources available to subaccounts, and these can be managed from the SAP BTP cockpit at the global account level.

* Why Not Other Options?

* Service Assignment (B): Assigns services to subaccounts but does not deal with resource allocation like memory or CPU.

* Entity Assignment (C): Not a relevant concept in this context.

* Entitlement (D): Entitlements grant access to specific services but do not directly manage memory allocation.

* SAP BTP Quota and Entitlement Management

NEW QUESTION # 17

You are a solution architect on a brownfield project where an SAP ECC 6.0 system is being migrated to SAP S/4HANA Cloud public edition. Two mission-critical legacy applications must be migrated to the new system. There is some debate on the project team as to the appropriate programming model to use:

* Application 1 was originally written using classic ABAP. The underlying SAP tables that the application originally relied on have been removed and the data now exists in a new simplified table in SAP S/4HANA Cloud public edition (to which table extensions are not permitted). Additional data needed for the application resides in SAP Ariba. Remote interfaces exist for both to select the data.

* Application 2 was originally written using Java and relied upon tables from the SAP ECC 6.0 system as well as SAP PLM 4.0. The PLM system will be retired; however, the SAP S/4HANA Cloud public edition instance has all the data needed for the application. No remote interfaces exist to select the data.

Which of the following approaches should the customer use? Note: There are 2 correct answers to this question.

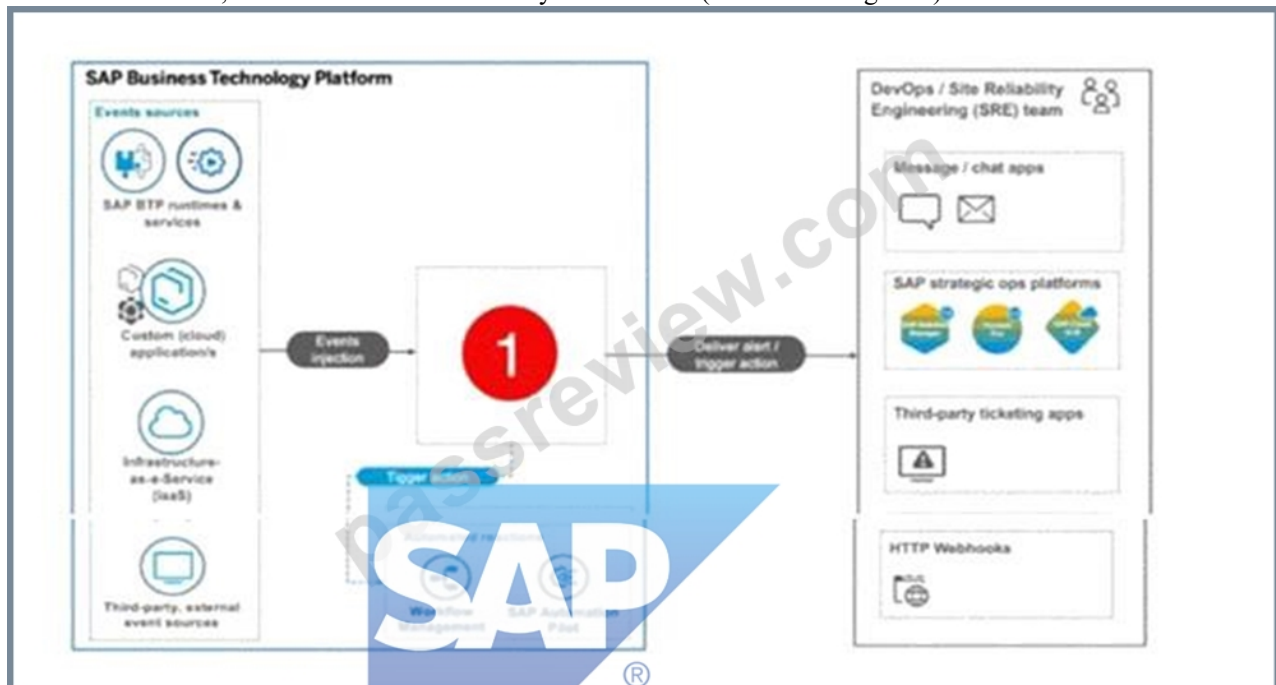

- A. Rewrite application 2 using the ABAP RESTful Application Programming Model
- B. Rewrite application 1 using the ABAP RESTful Application Programming Model
- C. Rewrite application 2 using the Cloud Application Programming Model
- D. Rewrite application 1 using the Cloud Application Programming Model

Answer: B,C

NEW QUESTION # 18

The DevOps / Site Reliability Team has a question for you. Over the course of the last month, several trust certificates have expired for several SAP BTP destinations, which has in turn occupied a significant portion of their time reinstalling. They wish to be informed before the certificate expires and to have a workflow triggered automatically.

As a solution architect, which SAP BTP service would you recommend (see attached diagram>)?

- A. SAP Monitoring service for SAP BTP
- B. SAP Solution Lifecycle Management service for SAP BTP
- C. SAP Solution Manager
- D. SAP Alert Notification service for SAP BTP

Answer: D

Explanation:

SAP Alert Notification service for SAP BTP is specifically designed to monitor events such as expiring trust certificates. It sends alerts via various channels (e.g., email, webhook) before critical events occur. It can trigger workflows or actions automatically, helping the DevOps/Site Reliability Engineering team stay proactive about certificate expiration and reducing downtime or manual effort. This service integrates seamlessly with automation workflows like SAP Automation Pilot to address the issues in real time. (Reference: SAP Alert Notification Service)

NEW QUESTION # 19

.....

If you are worried about that if you fail to pass the exam and will waste your money, if you choose us, there is no need for you to worry about this.
