P.S. Free & New PDII dumps are available on Google Drive shared by Actual4Cert: <https://drive.google.com/open?id=1sGppPkR3FC9WSmWWmlSFISl3HsR8ecK>

Because the effect is outstanding, the PDII study materials are good-sale, every day there are a large number of users to browse our website to provide the PDII study materials, through the screening they buy material meets the needs of their research. Every user cherishes the precious time, seize this rare opportunity, they redouble their efforts to learn, when others are struggling, why do you have any reason to relax? So, quicken your pace, follow the PDII Study Materials, begin to act, and keep moving forward for your dreams!

Salesforce PDII (Salesforce Certified Platform Developer II) is an advanced certification for Salesforce developers who want to demonstrate their expertise in building complex business logic and interfaces using the Salesforce platform. Salesforce Certified Platform Developer II (PDII) certification assesses a developer's knowledge and skills in developing custom applications on the Salesforce platform, including Apex, Visualforce, and Lightning Components. The PDII Certification is designed for experienced developers who have a deep understanding of Salesforce's platform capabilities and are capable of designing and implementing complex solutions to meet specific business requirements.

Valid Test PDII King | PDII 100% Free Book Free

The PDII certification exam is essential for future development, and the right to a successful PDII exam will be in your own hands. As long as you pass the exam, you will take a step closer to your goal. However, unless you have updated PDII exam materials, or passing the exam's mystery is quite challenging. Thousands of people tried the PDII exams, but despite having good professional experience and being well-prepared, the regrettable exam failed. One of the main reasons for the failure may be that since practice and knowledge alone are not enough, people need to practice our Actual4Cert PDII Exam Materials, otherwise they cannot escape reading. Well, you are in the right place. The PDII questions on our Actual4Cert are one of the most trustworthy questions and provide valuable information for all candidates who need to pass the PDII exam.

Salesforce Certified Platform Developer II (PDII) Sample Questions (Q160-Q165):

NEW QUESTION # 160

When the sales team views an individual customer record, they need to see recent interactions for the customer. These interactions can be sales orders, phone calls, or Cases. The date range for recent interactions will be different for every customer record type. How can this be accomplished?

- A. Use a Lightning component to query and display interactions based on record type that is passed in using a design:attribute from the Lightning page.
- B. Use a dynamic form on the customer record page to display recent interactions.
- C. Use batch Apex to query for the most recent interactions when the customer view screen is loaded.
- D. Use Lightning Flow to read the customer's record type, and then do a dynamic query for recent interactions and display on the View page.

Answer: A

Explanation:

A Lightning component can dynamically query and display interactions based on the customer's record type.

The component can receive the record type as a parameter and adjust the query accordingly, providing the required functionality without batch processing or additional configurations.

NEW QUESTION # 161

What field type can be used in the WHERE clause to improve SOQL query performance? Choose 3 answers

- A. Telephone fields
- B. Name fields
- C. Email fields
- D. External Id fields
- E. Lookup fields

Answer: B,D,E

NEW QUESTION # 162

For compliance purposes, a company is required to track long-term product usage in their org. The information that they need to log will be collected from more than one object and, over time, they predict they will have hundreds of millions of records.

What should a developer use to implement this?

- A. Big objects
- B. Field audit trail
- C. Setup audit trail
- D. Field history tracking

Answer: A

Explanation:

The best way to implement this is to use big objects. Big objects are custom objects that can store and manage massive amounts of data on the Salesforce platform. Big objects can handle hundreds of millions of records and support asynchronous SOQL queries. Big objects are also optimized for performance and scalability, and can be integrated with other Salesforce features such as reports, dashboards, and triggers. Setup audit trail, field audit trail, and field history tracking are not suitable for this scenario, as they have limitations on the number of fields, records, or retention periods that they can track. NEW QUESTION # 163

A developer is debugging an Apex-based order creation process that has a requirement to have three savepoints, SP1, SP2, and SP3 (created in order), before the final execution of the process.

During the final execution process, the developer has a routine to roll back to SP1 for a given condition. Once the condition is fixed, the code then calls 2 roll back to SP3 to continue with final execution. However, when the roll back to SP3 is called, a Runtime error occurs.

Why does the developer receive a runtime error?

- A. The developer should have called SF2 before calling SP3.
- B. The developer has too many DML statements between the savepoints.
- C. The developer used too many savepoints in one trigger session.
- D. SP3 became invalid when SP1 was rolled back.

Answer: D

Explanation:

Savepoints in Apex are markers within a transaction and rolling back to an earlier savepoint (SP1) invalidates any savepoints created after it. Thus, SP3 is invalidated when the code rolls back to SP1, causing a runtime error when a rollback to SP3 is attempted.

NEW QUESTION # 164

The use of the transient keyword In Visualforce Page Controllers helps with which common performance issued?

- A. Improves Query Performance
- B. Reduces View State
- C. Improves Page Transfers
- D. Reduces Load Times

Answer: B

NEW QUESTION # 165
